In 2015, building on the  
advances of the  
Millennium Development  
Goals, the United Nations  
adopted Sustainable  
Development Goals that  
include an explicit  
commitment to achieve  
universal health coverage  
by 2030. However,  
enormous gaps remain  
between what is  
achievable in human

health and where global health stands today, and progress has been both incomplete and unevenly distributed. In order to meet this goal, a deliberate and comprehensive effort is needed to improve the quality of health care services globally. Crossing the Global Quality Chasm: Improving Health Care Worldwide focuses on one particular shortfall in health care affecting global populations: defects in the quality of care. This study reviews the available evidence on

the quality of care worldwide and makes recommendations to improve health care quality globally while expanding access to preventive and therapeutic services, with a focus in low-resource areas. Crossing the Global Quality Chasm emphasizes the organization and delivery of safe and effective care at the patient/provider interface. This study explores issues of access to services and commodities, effectiveness, safety,

efficiency, and equity. Focusing on front line service delivery that can directly impact health outcomes for individuals and populations, this book will be an essential guide for key stakeholders, governments, donors, health systems, and others involved in health care.

The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an

unprecedented scrutiny that added new dimensions to the complex issues considered in this report. The Future of the Public's Health in the 21st Century reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted,

strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment

actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists.  The Cultural Revolution was an emotionally charged political awakening for the educated youth of China. Called upon by aging revolutionary Mao Tse-tung to assume a "vanguard" role in his new revolution to eliminate bourgeois revisionist influence in education, politics, and the arts, and to help to establish proletarian

culture, habits, and customs, in a new Chinese society, educated young Chinese generally accepted this opportunity for meaningful and dramatic involvement in Chinese affairs. It also gave them the opportunity to gain recognition as a viable and responsible part of the Chinese polity. In the end, these revolutionary youths were not successful in proving their reliability. Too “idealistic” to compromise with the bourgeois way, their sense of moral rectitude

also made it impossible for them to submerge their factional differences with other revolutionary mass organizations to achieve unity and consolidate proletarian victories. Many young revolutionaries were bitterly disillusioned by their own failures and those of other segments of the Chinese population and by the assignment of recent graduates to labor in rural communes. Educated Youth and the Cultural Revolution in China reconstructs the events of the Cultural

Revolution as they affected young people. Martin Singer integrates material from a range of factors and effects, including the characteristics of this generation of youths, the roles Mao called them to play, their resentment against the older generation, their membership in mass organizations, the educational system in which they were placed, and their perception that their skills were underutilized. To most educated young people in

China, Singer concludes, the Cultural Revolution represented a traumatic and irreversible loss of political innocence, made yet more tragic by its allegiance to the unsuccessful campaign of an old revolutionary to preserve his legacy from the inevitable storms of history.

*OECD Economic Surveys: Canada 2010* Smashbooks  
This public inquiry report into serious failings in healthcare that took place at the Mid Staffordshire NHS Foundation Trust builds on the first independent report published in February 2010 (ISBN

9780102964394). It further examines the suffering of patients caused by failures by the Trust: there was a failure to listen to its patients and staff or ensure correction of deficiencies. There was also a failure to tackle the insidious negative culture involving poor standards and a disengagement from managerial and leadership responsibilities. These failures are in part a consequence of allowing a focus on reaching national access targets, achieving

financial balance and seeking foundation trust status at the cost of delivering acceptable care standards. Further, the checks and balances that operate within the NHS system should have prevented the serious systemic failure that developed at Mid Staffs. The system failed in its primary duty to protect patients and maintain confidence in the healthcare system. This report identifies numerous warning signs that could and should have alerted the system to problems

developing at the Trust. It also sets out 290 recommendations grouped around: (i) putting the patient first; (ii) developing a set of fundamental standards, easily understood and accepted by patients; (iii) providing professionally endorsed and evidence-based means of compliance of standards that are understood and adopted by staff; (iv) ensuring openness, transparency and candour throughout system; (v) policing of these standards by the

healthcare regulator; (vi) making all those who provide care for patients , properly accountable; (vii) enhancing recruitment, education, training and support of all key contributors to the provision of healthcare; (viii) developing and sharing ever improving means of measuring and understanding the performance of individual professionals, teams, units and provider organisations for the patients, the public, and other stakeholders.

The U.S. military has been continuously engaged in foreign conflicts for over two decades. The strains that these deployments,

the associated increases in operational tempo, and the general challenges of military life affect not only service members but also the people who depend on them and who support them as they support the nation — their families. Family members provide support to service members while they serve or when they have difficulties; family problems can interfere with the ability of service members to deploy or remain in theater; and family members are central influences on

whether members continue to serve. In addition, rising family diversity and complexity will likely increase the difficulty of creating military policies, programs and practices that adequately support families in the performance of military duties. Strengthening the Military Family Readiness System for a Changing American Society examines the challenges and opportunities facing military families and what is known about effective strategies for supporting

and protecting military children and families, as well as lessons to be learned from these experiences. This report offers recommendations regarding what is needed to strengthen the support system for military families.
