The book is designed for undergraduate or beginning level graduate students, and students from interdisciplinary areas including engineers, and others who need to use partial differential equations, Fourier series, Fourier and Laplace

transforms. The prerequisite is a basic knowledge of calculus, linear algebra, and ordinary differential equations. The textbook aims to be practical, elementary, and reasonably rigorous; the book is concise in that it describes fundamental solution techniques for first order, second order, linear partial differential equations for general solutions, fundamental solutions, solution to Cauchy (initial value) problems, and boundary value problems for different PDEs in one and two dimensions, and different coordinates systems. Analytic solutions to boundary value problems are based on Sturm-Liouville eigenvalue problems and series solutions. The book is accompanied with enough well tested Maple files and some Matlab codes that are available online. The use of Maple makes the complicated series solution simple, interactive, and visible. These features distinguish the book from other textbooks available in the related area.

One can use this book as a study guide, knowledge test questions bank, practice test kit, quiz book, trivia questions . . . etc. The strategy used in this book is the same as that which mothers and grandmothers have been using for ages to induce kids in the family to sip more soup (or some other nutritious drink). The children are told that some cherries (their favourite noodles or cherries) are hidden somewhere in the bowl, and that serves as an incentive for drinking the soup. In joint families, by the time the children are old enough to know the trick played by their grandma, there is usually another group of kids ready to fall for it! They excite the kids, but the real nutrition lies not in the noodles but in the soup. The problems given in this book are like those noodles/cherries while solving all these problems are nutritious soup. Now it is your choice to drink the nutritious soups or not!!!.
