Current Developments in Biotechnology and Bioengineering: Sustainable Bioresources for the Emerging Bioeconomy outlines recent advances in bioenergy, biorefinery and the bioeconomy, an essential element for a 21st century bio-based society. The book provides information on biomass and various conversion technologies with different parameters that affect the conversion process. Sections cover different bioproducts, biorefinery systems, energy and greenhouse gas emission balances of bioenergy and biorefinery, and environmental and economic footprints of

bioeconomy. Finally, different strategies adopted by developed and developing countries for the promotion and implementation of a bioeconomy concept for a bio-based society are systematically covered. The book provides comprehensive information starting from early progress to the latest trends on bioenergy, biorefinery and bioeconomy with special reference to the developed and the developing countries and the linkage between bioeconomy and climate change mitigation in simple scientific language to appeal to a wider audience. Includes the fundamentals and concepts of biomass and bioenergy Outlines recent technology development for biomass conversion Provides concept for different bioproducts Covers global strategies and policies on the development of bioeconomies

In April 2000 researchers from around the world met in Lexington, Kentucky to bring together the very latest information on the chemistry and biological effects of the environmental pollutants known as Polychlorinated Biphenyls (PCBs). The result is a comprehensive and extensive treatment of the very latest findings on all significant subjects relating to PCBs and their health risks. The thorough introduction and sixty-two scientific papers presented here represent the most up-to-date research by scientists in government, private industry, and academia.

OIL Full Committee Hearing on Food Prices and Small Businesses Setting up and running a small-scale cooking oil business This book is the second volume in a three-

volume set on Solid Waste Engineering and Management. It focuses on sustainability, single waste stream processing, material recovery, plastic waste, marine litter, sludge disposal, restaurant waste recycling, sanitary landfills, landfill leachate collection, and landfill aftercare as it pertains to solid waste management. The volumes comprehensively discuss various contemporary issues associated with solid waste pollution management, impacts on the environment and vulnerable human populations, and solutions to these problems.

Cases on Applying Knowledge Economy Principles for Economic Growth in Developing Nations Kogan Page Publishers

As the planet's natural resources continue to be depleted, society's environmental awareness has grown. Businesses especially are being coerced into incorporating more sustainable approaches to carrying out their activities. Organizations that develop sustainable business strategies that deliver enhanced value by radically reducing material inputs and engaging consumers on circular economy will be well-positioned for success. *Mapping, Managing, and Crafting Sustainable Business Strategies for the Circular Economy* is an essential reference source that discusses implementing sustainable business strategies as well as economic policies for the modern business era. Featuring research on topics such as global business, urban innovation, and cost management, this book is ideally designed for managers, operators, manufacturers, academics, practitioners, policymakers, researchers, business professionals, and students seeking coverage on utilizing natural resources in the most sustainable way.

Cooperatives and Social Innovation CABI This book discusses social innovations by cooperatives from the Asia and Pacific region. Social innovations emerge when the state and market in developing countries find it difficult to solve problems such as poverty, hunger, ill health, poor education systems, inadequate drinking water and poor sanitation. These countries also face barriers to economic growth such as climate change, poor governance, unequal opportunities and social exclusion. This volume therefore addresses the following questions. What are the distinctive features of social innovations by cooperatives? How social innovations bring in changes in the process and outcome of development? After presenting theories of social innovation and a critical review of

cooperatives and social innovation, the book presents 15 chapters on social innovations by cooperatives in the Asia Pacific region. These social innovations are related to health insurance, community based tourism, disaster response, climate smart agriculture, use of social media for youth empowerment, training for the emergence of second-line leaders in cooperatives, social inclusion through innovative finance, profitable marketing of organic produce to strengthen economic status of small farmers, digital auction and value addition for income security of farmer members, collaboration between cooperative members and workers for the mutual benefit, worker cooperatives, women leadership and participation, building union-cooperative partnership in finance and rating of cooperatives to promote transparency and accountability. A chapter on innovative services of cooperatives during the time of Covid19 is also included. This volume will be quite significant for co-operators, researchers, teachers, practitioners and policy-makers at the global level. The theme is relevant for international development community and national cooperatives with concern for their communities, which is the seventh cooperative principle of International Cooperative Alliance and the Sustainable Development Goal of the UN.

Food Supply Chains in Cities Lulu.com The world population is expected to increase exponentially within the next decade, which means that the food demand will increase and so will waste production. The increasing demand for food as well as changes in consumption habits have led to the greater availability and variety of food with a longer shelf life. However, there is a need for effective food waste management and food preservation as wasted food leads to overutilization of water and fossil fuels and increasing greenhouse gas emissions from the degradation of food. The *Research Anthology on Food Waste Reduction and Alternative Diets for Food and Nutrition Security* explores methods for reducing waste and cutting food loss in order to help the environment and support local communities as well as solve issues including that of land space. It also provides vital research on the development of plant-based foods, meat-alternative diets, and nutritional outcomes. Highlighting a range of topics such as agricultural production, food supply chains, and sustainable diets, this publication is an ideal reference source for policymakers, sustainable developers, politicians, ecologists, environmentalists, corporate executives, farmers, and

academicians seeking current research on food and nutrition security.

Handbook of Research on Resource Management for Pollution and Waste Treatment CTA

It is necessary to understand the extent of pollution in the environment in terms of the air, water, and soil in order for both humans and animals to live healthier lives. Poor waste treatment or pollution monitoring can lead to massive environmental issues, such as diminishing valuable resources, and cause a significant negative impact on society. Solutions, such as reuse of waste and sustainable waste management, must be explored to prevent these adverse effects. The *Handbook of Research on Resource Management for Pollution and Waste Treatment* is a collection of innovative research that examines waste and pollution treatment methods that can be adopted at local and international levels and examines appropriate resource management strategies for environmentally related issues. Featuring coverage on a wide range of topics such as soil washing, bioremediation, and runoff handling, this book is ideally designed for environmentalists, engineers, waste management professionals, natural resource regulators, environmental policymakers, scientists, academicians, researchers, and students seeking current research on viable resource management methods for the regeneration of their immediate environment.

The environmental quality and popularity of any tourist destination is the outcome of sustained development, shaped by the socio-economic and physical dimensions of the local environment. Protecting the 'living landscape' requires recognizing, promoting and developing the links between economic, social and environmental objectives. This book therefore examines the tourism business in terms of 'greening' the local economy, people and environment, establishing the green agenda and investigating its application to the tourism sector.

The book takes a multi-level perspective, focusing on circular business models by manufacturing industries in European small open economies. The book conceptualises circular business models and combines theoretical foundations with best practices when such models appeared in the textile, furniture, and plastics industries. It also explores barriers, drivers, challenges, and opportunities for leading manufacturing companies to implement circular activities across the value chain. This book offers a qualitative and transformative approach, spread across three different manufacturing industries, towards a circular transition. The findings will be of interest to practitioners and managers, policymakers, and general readers who are interested in the circular economy and environmental sustainability.

The knowledge economy is the added non-monetary value that society accrues from increased access to data, information, and knowledge in the new, globally connected world. ICT and technology innovation are paving the way for significant economic development opportunities for countries that have embarked in a concerted effort to model their economies according to the knowledge economy principles. Among developing countries, knowledge economy principles are being applied mostly in a sector-wise level, where government intervention with enabling policies coupled with joint efforts by the private sector, academia, and other actors are resulting in durable and sustainable benefits. Cases on Applying Knowledge Economy Principles for Economic Growth in Developing Nations examines cases from developing countries in order to derive an adapted model of knowledge economy that could be applied to developing country conditions. This book contributes to the change of paradigm on how to help developing countries in advancing to better conditions by using ICT-related technology. Covering topics such as learning organizations, green technology, and sustainable organizations, this is a dynamic resource for emerging economies, researchers, students, professors, academicians, and multilateral organizations helping developing

countries.

WINNER: Les Plumes des Achats 2018 - Committee Special Prize A Circular Economy Handbook for Business and Supply Chains is an easily digestible and comprehensive handbook that provides a clear guide to the circular economy, helping the reader create future-fit, sustainable strategies. Real examples across a range of market sectors help businesses, students and policymakers understand the theory and fast-developing practice of the circular economy. To help the reader generate ideas, A Circular Economy Handbook for Business and Supply Chains provides a holistic framework for the design and supply chain and supporting business models, and includes tools the reader can use to get started. Whilst growing global consumption presents fantastic business opportunities, our current linear systems (take some materials, make a product, use it and then throw it away) are not fit for purpose. The circular economy unlocks this problem by decoupling resources from consumption. Engaged businesses are re-thinking product design, material choices, business models and supply chains. A Circular Economy Handbook for Business and Supply Chains is a must-read for anyone who wants to apply the circular economy today. Online resources now available: PowerPoint slides of figures and tables from every chapter created by the author.

An essential guide to contemporary marketing that demonstrates, via case studies, the move towards marketing techniques that better reflect consumer

needs. As the effectiveness of traditional marketing techniques continues to diminish, contemporary marketing increasingly becomes the most reliable method of expanding outreach and reflecting the needs of the modern consumer. When implemented, these contemporary strategies offer the greatest support for their client base, with a product range that adapts to the desires of the target market. The channels used to underpin these strategies are also radically different from traditional methods - placing emphasis upon platforms such as social media. Designed for both undergraduate and postgraduate students, as well as those in executive education and general business, *The Essentials of Contemporary Marketing* covers a wide range of themes, including: - Consumer behaviour - The latest marketing research - Services marketing - Brand management - Global marketing, and - Ethics in marketing. Each chapter includes case studies to illustrate and contextualise the topics covered, featuring companies as diverse as Amazon, McLaren, Unilever, UBS and Virgin Money. In alignment with its subject matter, *The Essentials of Contemporary Marketing* prioritises practicality over theory-based content - providing a comprehensive and contextualised insight into how marketing is developing in the 21st century.

Sustainable Food Waste-to-Energy Systems assesses the utilization of food waste in sustainable energy conversion systems. It explores all sources of waste generated in the food supply chain (downstream from agriculture), with coverage of industrial, commercial, institutional and residential sources. It provides a detailed analysis of the conventional pathways for food waste disposal and utilization, including composting, incineration, landfilling and wastewater treatment. Next, users will find valuable sections on the chemical, biochemical and thermochemical waste-to-energy conversion processes applicable for food waste and an assessment of commercially available sustainable food waste-to-energy conversion technologies. Sustainability aspects, including consideration of environmental, economic and social impacts are also explored. The book concludes with an analysis of how deploying waste-to-energy systems is dependent on cross-cutting research methods, including geographical information systems and big data. It is a useful resource for professionals working in waste-to-energy technologies, as well as

those in the food industry and food waste management sector planning and implementing these systems, but is also ideal for researchers, graduate students, energy policymakers and energy analysts interested in the most recent advances in the field. Provides guidance on how specific food waste characteristics drive possible waste-to-energy conversion processes Presents methodologies for selecting among different waste-to-energy options, based on waste volumes, distribution and properties, local energy demand (electrical/thermal/steam), opportunities for industrial symbiosis, regulations and incentives and social acceptance, etc. Contains tools to assess potential environmental and economic performance of deployed systems Links to publicly available resources on food waste data for energy conversion

This book analyses the food sector which has economic and political significance for all countries. A highly fragmented and heavily regulated sector, it has become increasingly complex owing to globalisation and geographical decoupling of production and consumption activities. The urban population of the world has grown from 746 million in 1950 to 3.9 billion in 2014 and more than 70% of the population is anticipated to be living in urban areas by 2050. Food supply chains play a vital role in feeding the world's most populous cities, whilst underpinning transportation, storage, distribution, and waste management activities for the sustainability of the urban environment. That is why, this book presents the latest research on food supply chain management with a focus on urbanisation. The contributions involve food distribution in cities, food waste minimisation, and food security with a focus on models and approaches to achieve more sustainable and circular food supply chains.
