*Practicing College Student Skills* Simon and Schuster

The general rule of thumb has been that you should study about two to three hours for every hour you spend in the classroom. If you have a 15 credit hour semester, you generally spend about 15 hours in class every week, which means you should be studying between 30 to 45 hours per week. That's a lot of time many students don't have that kind of time to spare. This book provides college students with 101 study tips that will help them cut down on study time. Our guide offers tips and tricks to be proficient while still absorbing the information needed to succeed. Students will learn how to take the best notes, time management skills, and the low-down on sleep, caffeine, and food. You'll learn how to write better papers, how to take tests more efficiently, and how to be a better reader. If you're struggling with studying techniques that take up your time and energy, look no further. This comprehensive guide is your key to getting the grade with the least amount of effort.

**How We Learn** Springer Science & Business Media

In the tradition of *The Power of Habit* and *Thinking, Fast and Slow* comes a practical, playful, and endlessly fascinating guide to what we really know about learning and memory today—and how we can apply it to our own lives. From an early age, it is drilled into our heads: Restlessness, distraction, and ignorance are the enemies of success. We're told that learning is all self-discipline, that we must confine ourselves to designated study areas, turn off the music, and maintain a strict ritual if we want to ace that test, memorize that presentation, or nail that piano recital. But what if almost everything we were told about learning is wrong? And what if there was a way to achieve more with less effort? In *How We Learn*, award-winning science reporter Benedict Carey sifts through decades of education research and landmark studies to uncover the truth about how our brains absorb and retain information. What he discovers is that, from the moment we are born, we are all learning quickly, efficiently, and automatically; but in our zeal to systematize the process we have ignored valuable, naturally enjoyable learning tools like forgetting, sleeping, and daydreaming. Is a dedicated desk in a quiet room really the best way to study? Can altering your routine improve your recall? Are there times when distraction is good? Is repetition

necessary? Carey's search for answers to these questions yields a wealth of strategies that make learning more a part of our everyday lives—and less of a chore. By road testing many of the counterintuitive techniques described in this book, Carey shows how we can flex the neural muscles that make deep learning possible. Along the way he reveals why teachers should give final exams on the first day of class, why it's wise to interleave subjects and concepts when learning any new skill, and when it's smarter to stay up late prepping for that presentation than to rise early for one last cram session. And if this requires some suspension of disbelief, that's because the research defies what we've been told, throughout our lives, about how best to learn. The brain is not like a muscle, at least not in any straightforward sense. It is something else altogether, sensitive to mood, to timing, to circadian rhythms, as well as to location and environment. It doesn't take orders well, to put it mildly. If the brain is a learning machine, then it is an eccentric one. In *How We Learn*, Benedict Carey shows us how to exploit its quirks to our advantage.

Teaching and Learning STEM presents a trove of practical research-based strategies for designing and teaching STEM courses at the university, community college, and high school levels. The book draws on the authors' extensive backgrounds and decades of experience in STEM education and faculty development. Its engaging and well-illustrated descriptions will equip you to implement the strategies in your courses and to deal effectively with problems (including student resistance) that might occur in the implementation. The book will help you: Plan and conduct class sessions in which students are actively engaged, no matter how large the class is Make good use of technology in face-to-face, online, and hybrid courses and flipped classrooms Assess how well students are acquiring the knowledge, skills, and conceptual understanding the course is designed to teach Help students develop expert problem-solving skills and skills in communication, creative thinking, critical thinking, high-performance teamwork, and self-directed learning Meet the learning needs of STEM students with a broad diversity of attributes and backgrounds The strategies presented in Teaching and Learning STEM don't require revolutionary time-intensive changes in your teaching, but rather a gradual integration of traditional and new methods. The result will be continual improvement in your teaching and your students' learning. More information about Teaching and Learning STEM can be found at <http://educationdesignsinc.com/book> including its preface, foreword, table of contents, first chapter, a reading guide, and reviews in 10 prominent STEM education journals. **Athletic Training Student Primer** Dorling Kindersley Ltd

This booklet offers suggestions to students on how to improve their study skills, with a focus on making more efficient and effective use of their study time. Chapter 1 presents tips for identifying one's optimal study conditions and getting organized. Chapter 2 focuses on time-management strategies, such as finding and using time to study. Ways to make study time more effective are described in the third chapter. Chapter 4 outlines the SQ3R method, which is comprised of the following stages--survey, question, read, restate, and review. Suggestions for taking good notes and ways in which parents can help their children study at home are also offered. Tips for preparing for and taking a test are offered in chapter 5, which describes how to match study techniques to one's learning style. For example, visual learners are encouraged to write lists of words and post them, make tables and timelines, and create flash cards. The use of performance portfolios as a multifaceted assessment tool is briefly discussed. In conclusion, students are encouraged to improve their study skills so that not only will they do well in school, they will continue to benefit from good habits throughout life. (LMI)
