 EBOOK: *Assessment, Learning And Employability* CRC Press
 Finalist for a Books for a Better Life Award A pediatric neuropsychologist presents strategies to help parents of special-needs children navigate the emotional challenges they face. As diagnosis rates continue to rise for autism, ADHD, learning disabilities, and other developmental differences, parents face a maze of medical, psychological, and educational choices - and a great deal of emotional stress. Many books address children's learning or behavior problems and advise parents what they can do to help their kids, but until *Not What I Expected: Help and Hope for Parents of Atypical Children* there were no books that explain what the parents are going through - and how they can cope with their own emotional upheaval - for their own sake, and for the wellbeing of the whole family. With compassion, clarity, and an emphasis on practical solutions, Dr. Rita

Eichenstein's *Not What I Expected: Help and Hope for Parents of Atypical Children* walks readers through the five stages of acceptance (similar to the stages of grief, but modified for parents of special-needs kids). Using vivid anecdotes and suggestions, she helps readers understand their own emotional experience, nurture themselves in addition to their kids, identify and address relationship wounds including tension in a marriage and struggles with children (special-needs and neurotypical), and embrace their child with acceptance, compassion and joy.

This classic, definitive reference work for all those involved in environmental health is now available in its 19th edition. Significant changes include those made to chapters on food safety and hygiene, environmental protection, the organisation and management of environmental health in the UK, port health, and waste management. New chapters have been added on health development, an introduction to health and housing, contaminated land, and environmental health in emergency planning, as well as a new glossary of abbreviations and acronyms. New material on training and standards, IT, practical risk assessment, and investigatory powers is also included. Each chapter reflects the wider background against which the subjects must be studied and the new concepts and approaches that have emerged over the past few years.

A deadly political rivalry that ended in two brutal executions...An intricate love triangle that altered the course of history...A religious revolution that changed the world... THE TREASURE... For two thousand years, an undiscovered treasure rested in the rocky wilds of the French Pyrenees. A series of scrolls written in the first century by Mary Magdalene, these startling documents hold the power to redefine the events and characters of the New Testament. Protected by supernatural forces, the priceless cache can only be uncovered by a special seeker, one who has been chosen for the task by divine providence - The Expected One. THE CHOSEN ONE... When journalist Maureen Paschal begins the research for a new book, she has no idea that she is stepping into an ancient mystery so complex and dangerous that thousands of people have killed and died for it. As a long buried family scandal comes to light, she can no longer deny her own role in a deadly drama of epic international consequences.

Clay's Handbook of Environmental Health McGraw-Hill/Irwin

This book starts from three observations. First, the use of humour is a complex, puzzling, and idiosyncratically human form of behaviour (and hence is of scientific interest). Second, there is currently no theory of how humour works. Third, one useful step towards a theory of humour is to analyze humorous items in precise detail, in order to understand their mechanisms. The author begins by considering how to study jokes rigorously: the assumptions to make, the guidelines to follow and the pitfalls to avoid. A critique of other work on humour is also provided. This introduces some important concepts, and also demonstrates the lack of agreement about what a theory of humour should look like. The language devices used in various jokes, such as puns or humour based on misinterpretation, are analysed in detail. The central part of the book develops, and demonstrates, proposals for how best to analyze the workings of simple jokes. Finally, the author makes some general suggestions about the language devices that seem to be central to the construction of jokes. The Linguistic Analysis of Jokes will be invaluable for researchers and advanced students of humour research, linguistics and cognitive science.

What to Expect When You're Expected Routledge

Decades of research have demonstrated that the parent-child dyad and the environment of the

family--which includes all primary caregivers--are at the foundation of children's well- being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

The Railroad Merger Problem Crossway

Employees may face constantly changing roles, responsibilities and expectations that can leave them feeling isolated, confused, and unproductive. Managers rarely have time to give employees the kind of one-on-one attention that might keep them motivated with a sense of purpose and commitment to achieve strategic business results. So, what does it take for people to work with a sense of engagement, meaning and purpose in what they do? At the most basic level, it involves truly understanding and following through to meet and exceed the expectations that various stakeholders have on them to do the work needed to achieve strategic outcomes and results. It is a given that the world of work is in constant change. The social contract between employer and employee has changed. To compete, succeed and meet stockholder expectations, business owners and executives are restructuring their businesses, reorganizing departments and functions, reengineering work processes, re-deploying people and expecting more from retrenched resources. Any guarantee of lifelong employment in any one company is gone in all industries, including the government sector and there is an emerging expectation on the part of employers that employees be accountable for their performance and that employees be stakeholders in the results they produce. At the same time employers are looking to recruit and retain the best employees who are able to take responsibility for their own job development and performance improvement and employees are focused on the quality of their personal and professional. Ultimately, if companies expect to achieve the results they expect, leaders must create an environment for people to learn how not only what is expected of them, but also and more importantly, to take responsibility for managing their own performance. By applying the concepts and doing the exercises in this guidebook, you will learn how to: * Implement an Employee Engagement approach that aligns your company or department's "big picture" with the "bottom line". * Assess how your organization's culture affects your employee's engagement and performance. * Move from a focus on job descriptions to performance expectations. * Link organizational performance measures with individual and team performance. * Refine your management practices to enhance employee engagement, motivation and accountability. * Create a climate and for your employees to feel totally engaged and able to "manage their own performance"

What is assessed gets attention: what is not assessed does not. When higher education is expected to promote complex achievements in subject disciplines and in terms of 'employability', problems arise: how are such achievements to be assessed? In the first part of the book, it is argued that existing grading practices cannot cope with the expectations laid upon them, while the potential of formative assessment for the support of learning is not fully realised. The authors

argue that improving the effectiveness of assessment depends on a well-grounded appreciation of what assessment is, and what may and may not be expected of it. The second part covers summative judgements for high-stakes purposes. Using established measurement theory, a view is developed of the conditions under which affordable, useful, valid and reliable summative judgements can be made. One conclusion is that many complex achievements resist high-stakes assessment, which directs attention to low-stakes, essentially formative, alternatives. Assessment for learning and employability demands more than module-level changes to assessment methods. The final part discusses how institutions need to respond in policy terms to the challenges that have been posed. The book concludes with a discussion of how institutions can respond in policy terms to the challenges that have been posed. Assessment, Learning and Employability has wide and practical relevance - to teachers, module and programme leaders, higher education managers and quality enhancement specialists.

Not What I Expected National Academies Press

Structuring Sense explores the difference between words however defined and structures however constructed. It sets out to demonstrate over three volumes that the explanation of linguistic competence should be shifted from lexical entry to syntactic structure, from memory of words to manipulation of rules. Its reformulation of how grammar and lexicon interact has profound implications for linguistic, philosophical, and psychological theories about human mind and language. Hagit Borer departs from language specific constructional approaches and from lexicalist approaches to argue that universal hierarchical structures determine interpretation, and that language variation emerges from the morphological and phonological properties of inflectional material. Taking Form, the third and final volume of Structuring Sense, applies this radical approach to the construction of complex words. Integrating research in syntax and morphology, the author develops a new model of word formation, arguing that on the one hand the basic building blocks of language are rigid semantic and syntactic functions, while on the other hand they are roots, which in themselves are but packets of phonological information, and are devoid of both meaning and grammatical properties of any kind. Within such a model, syntactic category, syntactic selection and argument structure are all mediated through syntactic structures projected from rigid functions, or alternatively, constructed through general combinatorial principles of syntax, such as Chomsky's Merge. The meaning of 'words', in turn, does not involve the existence of lexemes, but rather the matching of a well-defined and phonologically articulated syntactic domain with conceptual Content, itself outside the domain of language as such. In a departure from most current models of syntax but in line with many philosophical traditions, then, the Exo-Skeletal model partitions 'meaning' into formal functions, on the one hand, and Content, on the other hand. While the former are read off syntactico-semantic structures as is usually assumed, Content is crucially read off syntactico-phonological structures.

Learn how to design and implement a performance feedback program that will help employees take performance to a higher level. The advice, tips, models and tools described in Performance Feedback will help you give more complete feedback to your employees. They will better understand what is expected of them and how they can improve in specific areas to meet the organization's expectations. The book consists of four chapters that cover the importance of feedback, developing a formal feedback system, using formal performance feedback and other types of feedback. Once you implement the performance feedback process outlined in this book, everyone will benefit. This book is part of the HR Skills Series designed to help managers plan for and manage changes in such areas as consumer demand, workforce turnover, production, and performance standards.

McGraw-Hill Education (UK)

This book is about understanding where your expectations come from, what drives them, why you aren't always aware of them, how to come to peace after being upset by an expectation going unmet, and increasing communication with yourself and others.
