From online marketing strategies and development methods, to the philosophy of digital thinking, The Online Business Guide gives you all the tools you need when starting a new business. "I recommend, with confidence and great pleasure, the book The Online Business Guide written by Mr. Victor Marcoianu, whom I have known for over 5 years, during which time we carried out professional activities and education together. The Online Business Guide explains in detail what steps need to be followed to launch and promote a business in the digital environment, especially in the current conditions in which most businesses go

to the online environment. " Associate Professor Eng. Iustin PRIESCU, PhD During my years as a software developer and marketing manager, I have promoted many businesses online and helped create many successful brands. I had the opportunity to work with businesses in a wide range of fields, from local businesses to the marketing of laboratory products, music bands, well-known authors and beauty salons, to universities, online malls and amusement parks. The SenDesign activity takes place all over the globe: in Romania, in Europe, in Australia, in the USA, etc. Thus, I had the opportunity to face many problems either technical, human or psychological nature. Based on experience in software development, digital marketing and branding, I wrote The Online Business Guide to help you grow and reach your audience. The book is addressed to you if you are just opening a business or you are a person of interest and you want to promote

yourself in the online environment. Originally published episodically on the SenDesign blog, the information is gathered, adjusted and completed in an easy and easily digestible format. To read this guide you do not need advanced technical knowledge, but only patience, ambition and curiosity. The guide does not go into programming details and is not a tutorial on creating a website. Here are listed and described the methods and principles needed to create an online presence. Of course, any marketing or programming skill is welcome. By reading the Online Business Guide you will accumulate basic notions and vital techniques to create an online marketing plan. You will find out what you need to know when ordering or creating a website, in the design of a logo, in the creation of social media pages and your image in the online environment. We will also address methods of popularizing and increasing website traffic and customer perception of the brand. We will explore innovative ways to cover as wide a segment of the market as possible and turn your brand into 21st century technology. Why you need a mobile app and what can you create to keep up with the competition. In conclusion, I will talk about how to think online and how you should behave in the digital environment in terms of my experiences with customers over the years. The philosophy of success, common mistakes and the abyss of the lack of trust.

"Smart Technologies" for Society, State and Economy Routledge

"Everything worth winning in life boils down to teamwork and leadership. In my positions as a businessman, athlete, community leader, and University trustee, there are tremendous parallels between all of these endeavors that mirror an extreme team

sport such as medical technology. Understanding the game, defining the game, playing your position at your highest performance, and helping others play their best game. Advanced Health Technology represents an incredible opportunity to level up the game of healthcare and highlights the multiple disciplines - or positions to be mastered - while laying out winning plays to make that next level happen." Ronnie Lott, Managing Member, Lott Investments; Member, Pro Football Hall of Fame, and Trustee, Santa Clara University Healthcare stakeholders are paralyzed from making progress as risks explode in volume and complexity. This book will help readers understand how to manage and transcend risks to drive the quadruple aim of improved patient experiences, better patient and business outcomes, improved clinician experience, and lower healthcare costs, and also help readers learn from working successful examples across projects, programs, and careers to get ahead of these multidisciplinary healthcare risks.

Viktor Simov is the first English-language biography of Konstantin Stanislavsky's principal scenic designer at the Moscow Art Theatre from the company's formation in 1898. His groundbreaking work included the designs for the premieres of Anton Chekhov's major stage plays, and his approach to theatre design still influences contemporary scenography. Translated from the original Russian text written by author, editor, and literary critic Yuri Ivanovich Nekhoroshev, the book provides a revealing insight into the staging and technical practices of one of the world's most influential theatre companies. Supported by 60 illustrations

representing the full range of Simov's designs, this volume provides a historical account of Simov's career and a vivid description and critical assessment of his work. The book traces the artist's development from his early years as a painter to his later experiments in early silent film design, including his work for the classic Russian science fiction film *Aelita, Queen of Mars* (1924). Written for theatre scholars and students of Scenic Design and Drama courses, *Viktor Simov: Stanislavsky's designer* re-establishes Simov as one of the most influential theatre designers of the 20th century.

Handbook of Research on Ethical Challenges in Higher Education Leadership and Administration Routledge

★"[T]his is a scholarly, commendable biography and intellectual history. Lay readers will be challenged; psychologists and historians will be grateful."—Library Journal, starred review First published in 1946, Viktor Frankl's memoir *Man's Search for Meaning* remains one of the most influential books of the last century, selling over ten million copies worldwide and having been embraced by successive generations of readers captivated by its author's philosophical journey in the wake of the Holocaust. This long-overdue reappraisal examines Frankl's life and intellectual evolution anew, from his early immersion in Freudian and Adlerian theory to his development of the "third Viennese school" amid the National Socialist domination of professional psychotherapy. It teases out the fascinating contradictions and ambiguities surrounding his years in Nazi Europe, including the experimental medical procedures he oversaw in occupied Austria and a stopover at the Auschwitz concentration camp far briefer than has commonly been assumed. Throughout, author Timothy

Pytell gives a penetrating but fair-minded account of a man whose paradoxical embodiment of asceticism, celebrity, tradition, and self-reinvention drew together the complex strands of twentieth-century intellectual life. From the introduction: At the same time, Frankl's testimony, second only to the Diary of Anne Frankin popularity, has raised the ire of experts on the Holocaust. For example, in the 1990s the United States Holocaust Memorial Museum in Washington purportedly refused to sell *Man's Search for Meaning* in the gift shop.... During the late 1960s and early 1970s Frankl became very popular in America. Frankl's survival of the Holocaust, his reassurance that life is meaningful, and his personal conviction that God exists served to make him a forerunner of the self-help genre.

The book is about human spiritual capacities that Viktor Frankl presents in his philosophy and their applicability to the daily lives of all of us. The book is divided into two parts, theoretical and practical. The focus of the first part of the book is to analyze Viktor Frankl's holistic conception of the person. In the second part, the person's fundamental abilities, such as self-distancing, self-transcendence, and the defiant power of the human spirit, are examined in depth. The book's perspective is on the existential-phenomenological philosophical nature of logotherapy and its consistent consideration, especially when it comes to helping other people alleviate their suffering.

This book focuses on extraction of pertinent information from statistical test outputs, in order to write result sections and/or accompanying tables and/or figures. The book is divided into two

encompassing sections: Part I – Basic Statistical Tests and Part II – Advanced Statistical Tests. Part I includes 9 basic statistical tests, and Part II includes 7 advanced statistical tests. Each chapter provides the name of a basic or advanced statistical test, a brief description, examples of when to use each, a sample scenario, and a sample results section write-up. Depending on the test and need, most chapters provide a table and/or figure to accompany the write-up. The purpose of the book is to provide researchers with a reference manual for writing results sections and tables/figures in scholarly works. The authors fill a gap in research support manuals by focusing on sample write-ups and tables/figures for given statistical tests. The book assists researchers by eliminating the need to comb through numerous publications to determine necessary information to report, as well as correct APA format to use, at the close of analyses.

This book celebrates the 15th anniversary of the bi-annual symposium series Mathematics and its Connections to the Arts and Sciences (MACAS), which was first held in 2005 following the continued collaboration of an international group of researchers from ICME Topic Study Group 21. The MACAS-conferences bring together scientists and educators who are interested in the connection between mathematics, arts and science in educational curriculum, while emphasizing on, as well as researching about, the role of mathematics. By pooling together these different approaches and viewpoints between mathematics, arts and sciences, this book reveals possible synergies and paths for collaborations. In view of the challenges of the 21st century, a modern approach to education with a focus

on multi- and interdisciplinarity is more important than ever. The role of mathematics assumes a key role in this approach as it is connected to all other disciplines, such as STEM education, physics, chemistry, biology, aesthetics and language, and can serve as a bridge between them. This book discusses, amongst others, the curricular approaches to integrate mathematics and other disciplines, the importance of mathematical modelling and the interdisciplinarity ways for learning and studying of mathematics, as well as the intercultural dimensions of mathematics and mathematics in the digital era. All topics will be presented from very different perspectives and regarding very different contexts, including digitization, culture and sustainability. This unique collection will serve as a very valuable and compact source for all above mentioned scientists and educators, as well as for use in advanced teacher education courses.

The thirteen papers in this collection address three aspects of higher education, primarily in Europe but also in the United States. These aspects are competition, collaboration, and complementarity, both on the level of policy and on the practical level of impact on students and staff. Competition, especially for funding, occurs between and within institutions. Collaboration, more than a basic code of conduct, has become a political principle across Europe. Complementarity in the market for higher education facilitates this collaboration. The themes and contexts in higher education for which the three Cs are examined

include missions and identities, response to external forces, the impact of evaluation systems and ranking schemes, the effects of globalisation, intercultural awareness and gender imbalance, and the challenges of student participation. Statistical tables and visual aids support the analysis and arguments. This book is the fifth in a series of publications drawn from the annual Forums of the European Association of Institutional Research (EAIR) from 2013 onwards

Viktor Shklovsky (1893-1984) was both patriarch and enfant terrible of Formalism, a literary and film scholar, a fiction writer and the protagonist of other people's novels, instructor of an armored division and professor at the Art History Institute, revolutionary and counterrevolutionary. His work was deeply informed by his long and eventful life. He wrote for over seventy years, both as a very young man in the wake of the Russian revolution and as a ninety-year old, never tiring of analyzing the workings of literature. *Viktor Shklovsky: A Reader* is the first book that collects crucial writings from across Shklovsky's career, serving as an entry point for first-time readers. It presents new translations of key texts, interspersed with excerpts from memoirs and letters, as well as important work that has not appeared in English before.

This proceedings book presents a comprehensive view of “smart” technologies and perspectives of their application in various areas of economic activity. The authors of the book combined the results of the cutting-edge research on the topic of “smart” technologies in the digital economy and Industry 4.0 and developed a unified scientific concept. The current experience has been considered, and the prospects for the application of “smart” technologies in society to promote social advance have been identified. “Smart” technologies in public administration and law, as well as the experience in development of e-government, have been examined. “Smart” technologies in business activity have been studied, and the transition from digital business to business 4.0 has been justified. The book contains the collection of the best works following the results of the 13th International Research-to-Practice Conference “Smart Technologies” for society, state and economy which was run by the Institute of Scientific Communications (ISC) and was held on

July 2–3, 2020. The target audience of this book includes researchers investigating fundamental and applied problems of development of “smart” technologies, as well as concerned parties outside the academic community, in particular, representatives of the digital society, high-tech business entities and officials regulating the digital economy and Industry 4.0. *Data Science for COVID-19* Central European University Press
 "I find myself talking to you about all the great joys, all the agonies, all my thoughts..." Letter to Eva Konikova, 1946 Out of the thousands of letters Tove Jansson wrote a cache remains that she addressed to her family, her dearest confidantes, and her lovers, male and female. Into these she spilled her innermost thoughts, defended her ideals and revealed her heart. To read these letters is both an act of startling intimacy and a rare privilege. Penned with grace and humour, Letters from Tove offers an almost seamless commentary on Tove Jansson's life as it unfolds within Helsinki's bohemian circles and her island home. Spanning fifty years between her art studies and the height of Moomin fame, we share with her the bleakness of war; the hopes for love that were dashed and renewed, and her determined attempts to establish herself as an artist. Vivid, inspiring and shining with integrity, Letters from Tove shows precisely how an aspiring and courageous young artist can evolve into a very great one.

The book contains proceedings of the XV International Scientific Conference INTERAGROMASH 2022, Rostov-on-Don, Russia. The agro-industrial complex is the most extensive and vital industry. It is rapidly developing by introducing the latest technologies and automating various processes necessary for the functioning of this area. The book is dedicated to engineering technologies of precision farming and agricultural robotics. It includes studies on natural resources variability, sustainable soil management, Agro Big Data, Internet of Things, software and mobile apps for precision agriculture, smart weather for precision agriculture,

simulations models and decision support systems, expert systems, DGPS, soil physical and chemical characteristic sensors, machinery, etc. Different types of agricultural robots are presented in the book: autonomous fruit picking robots, farming bots that can seed and water plants, test the soil and remove weeds, completely autonomous robot for ecological and economical ultra-high precision spraying and weeding, harvesting robots with the special vision systems that can "see" fruits and understand whether they're ripe and ready to pick, and others. Also, the book covers advances in agricultural biotechnology in such areas of research as crop production improvement practices, genetic modification, as well as microbial biotechnology in agriculture, etc. The book is aimed for scientists, researchers, and graduate students. It is also useful for representatives of regional authorities, as it gives an idea of existing high-tech solutions for agriculture. The book is written and edited by international researchers, academics, and experts in the corresponding research areas.
