### Financial Planning DIY Guide Routledge

Financial advisors, poker players, hedge fund traders, fund-raisers, sports agents, credit counselors and commissioned salespeople all deal with one central concern in their jobs: money. In *Money at Work*, Kevin Delaney explores how we think about money and, particularly, how our jobs influence that thinking. By spotlighting people for whom money is the focus of their work, Delaney illuminates how the daily practices experienced in different jobs create distinct ways of thinking and talking about money and how occupations and their work cultures carry important symbolic, material, and practical messages about money. Delaney takes us deep inside the cultures of these 'moneyed' workers, using both interviews and first-hand observations of many of these occupations. From hedge fund trading rooms in New York, to poker players at work in Las Vegas casinos, to a "Christian money retreat" in a monastery in rural Pennsylvania, Delaney illustrates how the underlying economic conditions of various occupations and careers produce what he calls "money cultures," or ways of understanding the meaning of money, which in turn shape one's economic outlook. Key to this is how some professionals, such as debt counselors, think very differently than say poker players in their regard to money—Delaney argues that it is the structure of these professions themselves that in turn influences monetary attitudes. Fundamentally, *Money at Work* shows that what people do for a living has a profound effect on how people conceive of money both at work and in their home lives, making clear the connections between the economic and the social, shedding light on some of our most basic values. At a time when conversations about money are increasingly important, Delaney shows that we do not merely learn our attitudes toward money in childhood, but we also learn important money lessons from the work that we do.

"It's not that we're dumb. We're wired to avoid pain and pursue pleasure and security. It feels right to sell when everyone around us is scared and buy when everyone feels great. It may feel right-but it's not rational." -From *The Behavior Gap* Why do we lose money? It's easy to blame the economy or the financial markets-but the real trouble lies in the decisions we make. As a financial planner, Carl Richards grew frustrated watching people he cared about make the same mistakes over and over. They were letting emotion get in the way of smart financial decisions. He named this phenomenon-the distance between what we should do and what we actually do-"the behavior gap." Using simple drawings to explain the gap, he found that once people understood it, they started doing much better. Richards's way with words and images has attracted a loyal following to his blog posts for *The New York Times*, appearances on National Public Radio, and his columns and lectures. His book will teach you how to rethink all kinds of situations where your perfectly natural instincts (for safety or success) can cost you money and peace of mind. He'll help you to: • Avoid the tendency to buy high and sell low; • Avoid the pitfalls of generic financial advice; • Invest all of your assets-time and energy as well as savings-more wisely; • Quit spending money and time on things that don't matter; • Identify your real financial goals; • Start meaningful conversations about money; • Simplify your financial life; • Stop losing money! It's never too late to make a fresh financial start. As Richards writes: "We've all made mistakes, but now it's time to give yourself permission to review those mistakes, identify your personal behavior gaps, and make a plan to avoid them in the future. The goal isn't to make the 'perfect' decision about money every time, but to do the best we can and move forward. Most of the time, that's enough."
