The Vietnam War, and Australia's part in it, was a major military event, calling for willingness to face death and destruction on the battlefield on the part of those sent there, especially the men of our infantry battalions who formed the spearhead of our forces in Vietnam. For many reasons, the Australian public know relatively little about what our Army did in Vietnam during the war, particularly during the years of our peak commitment, 1965-72. This book attempts to make the true nature of the war clearer to readers, emphasising how hard fought it was during major operations. Twenty-seven of the contributing authors of this book were involved in the 1966 deployment of the 1st Australian Task Force into Phuoc Tuy Province. This formation was the first Australian Army force larger than an infantry battalion group to be deployed into a major war since World War II. 5th Battalion, the Royal Australian Regiment (5 RAR), was in the vanguard as the task force's first element committed to operations to seize and occupy Nui Dat base and embark on establishing dominance over the enemy. The narratives presented in this book give rare insights into thoughts of the soldiers at the time and how they have come to view the Australian Government's hurried expansion of its initial commitment to that war, the Army's state of preparedness for that wider involvement, and how those in its forefront adapted to get the job done, both in and out of operations, despite numerous shortcomings in higher level planning. Both professional soldiers and conscripted national servicemen have contributed viewpoints to these pages.

This is the inside story of one of the earliest successful U.S. satellites, a fascinating Cold War-era chronicle of the nation's earliest battles and triumphs in the Space Race. It recounts the origins, development, and results of Project Vanguard, a pioneering venture in the exploration of outer space. Primarily an analysis of the project's scientific and technical challenges, this volume documents onboard experiments, instrumentation, tracking systems, and test firings. It also portrays the drama of organizing an unprecedented project under the pressure of a strict time limit as well as the tempestuous climate of American opinion during the Soviet Union's Sputnik launches. The history concludes with an evaluation of the satellite program's significant contributions to scientific knowledge. Numerous historic photographs highlight the text, which is written in accessible, nontechnical language. In addition to a historic foreword by Charles A. Lindbergh, this new edition features an informative introduction by Paul Dickson. Authoritative and inexpensive, it will appeal to students and teachers of history and science as well as aviation enthusiasts.

Prepared by the Afghan Study Team of the Combat Studies Institute, U.S. Army, From the foreword by Genral (ret.) David Petraeus: "In 2010, as the scale and tempo of Coalition operations in Afghanistan increased, so did the need for historical accounts of small-unit actions. As commander of the International Security Assistance Force (ISAF), I commissioned the Combat Studies Institute to research and write the cases collected in this volume and in those that will follow. By capturing key insights from both lethal and non-lethal operations, I hoped these accounts would be of immediate utility to sergeants and lieutenants at the center of future operations. The eight actions described in these pages take the reader through a wide range of platoon-level operations, from an intense firefight near Kandahar to an intricate civic action project in Kunar Province. Drawing from dozens of Soldier interviews, these accounts vividly depict the actions themselves and offer critical insights of greatest benefit to the small-unit actions leaders of today and tomorrow. The US Army always has prided itself as an institution of constant learning, strongly committed to drawing lessons from its past. This volume from the Combat Studies Institute is an excellent example of that long and honorable tradition. I hope that you will find the actions n Vanguard of Valor to be both instructive and compelling. I am sure that you will find them to be inspirational."

The book is unique because it introduces students to customary contract provisions, and walks students through the lifecycle of a contract, including (i) pre-formation activities such as due diligence, preliminary negotiations, and contract drafting, (ii) contract formation, performance, and amendment, and (iii) dispute activities, such as interpretation,

enforcement, defenses, and remedies. The book explores how parties "contract around" default requirements of the law, in addition to satisfying mandatory aspects of the law, through contracts. The book describes the role of both the transactional lawyer and litigator in working with contracts. It presents much of the material in expository fashion rather than only or primarily through cases. This allows students to learn the doctrine more easily. It also allows for more time on applying the law to new situations. The book challenges students to apply contract law through transactional and litigation practice and simulation problems, which are adaptable to the classroom and asynchronous setting. New to the Second Edition: Additional materials covering the professional identities of attorneys, in addition to their professional responsibilities. Revised practice problems for students to apply the contract law doctrine and private ordering principles they have learned. Expanded discussion of the role of contracts and contract law in widening and correcting power imbalances. Several new cases to enhance the learning experience. Professors and students will benefit from: Material presented on contract design and terms so that students understand how contracts are used in practice by businesspersons and how contract law supports this private ordering. Many examples of contract language to demonstrate why and how parties customize contracts to further their goals. Discussion of the role of the transactional lawyer in working with contracts so that students can begin to develop important transactional skills and wrestle with some of the professional dilemmas transactional lawyers frequently face. Explanations of contract law and other material presented through expository text to give students a more comprehensive and clearer view of what limits the law imposes on their private ordering through contracts and which requirements can be contracted around. A large set of problems, many of which involve tasks assigned to new transactional lawyers and litigators, to allow students to learn the material through active participation and critical thinking.
