Introduction to Nursing Research: Incorporating Evidence-Based Practice National Academies Press

“This book is brilliant, relevant, and a must-have resource for all preceptors and those supporting the lifelong learning journey of preceptors. This edition provides updated strategies for all preceptors and the ability to develop meaningful action plans to enhance the learning journeys.” –Sylvain Trepanier DNP, RN, CENP, FAONL, FAAN SVP, Chief Nursing Officer Providence, Renton, Washington “In today’s turbulent healthcare environment, preceptors play a crucial role in the successful

professional transition of nurses. The nurse tenure in acute care settings has dropped over the past years, and many of today’s preceptors are new to their roles. Precepting is both an art and a science. This new edition of Mastering Precepting provides an evidence-based road map for preceptor development and strategies to avoid preceptor burnout.” –Rose O. Sherman EdD, RN, NEA-BC, FAAN Professor Emeritus Florida Atlantic University Editor-in-Chief, Nurse Leader “Once we expected faculty to monitor students, for new graduates to ‘figure it out,’ and for a nurse with any experience to transition anywhere needed. Then, as we focused on safety and quality, we realized all those individuals needed support of some kind to acquire the new expected competencies of the role in that setting. Once again, that is what Dr. Ulrich and her colleagues have done in the third

edition of *Mastering Precepting*, with just the right balance of theory and practicality to make this a most useful book.” –Patricia S. Yoder-Wise, EdD, RN, NEA-BC, ANEF, FAONL, FAAN Professor and Dean Emerita, Texas Tech University Health Sciences Center Co-Founder and Vice President, the Nurses Legacy Institute Editor-in-Chief, *The Journal of Continuing Education in Nursing*

Preceptors have the power and opportunity to inspire nurses and other healthcare providers to achieve greatness. Effective precepting programs depend on two critical groups: those who organize and manage the programs and those who support, teach, and coach. Beth Ulrich and her team of expert contributing authors provide the knowledge, tools, skills, and wisdom both groups need for success. Written for staff nurses and other care providers, managers, and educators, this third edition of *Mastering Precepting* teaches preceptors both the science and art of precepting and empowers them to seek the support they need to be effective. For managers, it emphasizes the importance of providing preceptors with positive and supportive experiences. For educators, it provides the information and knowledge required to develop and improve preceptor programs.

"Introduction to Nursing Research: Incorporating Evidence-Based Practice teaches pre-licensure nursing students how they can integrate evidence-based practice and research into their daily work against the backdrop of current trends and issues in nursing practice. Safe, effective, quality patient care is simply not achievable without a strong foundation in evidence-based practice, a reality this text makes apparent. Unique in its approach, the current edition combines research, quality improvement, and evidence-based practice together, illuminating core concepts and showing students how to do the research while establishing a foundation that will lead them to evidence-based practice. Measurable objectives, thoughtful applications of evidence-based practice, and quality improvement concepts all play a prominent role in this text, as knowledgeable researchers and academics explore core concepts alongside current research. Case studies and "Thinking Outside the Box" features provide real-world, practical examples for students to consider, and "Red Flags" help students heighten their focus as they appraise and investigate research and evidence"--

The Future of Nursing Springer Publishing Company

Presents brief profiles of over three thousand undergraduate, graduate, and postdoctoral nursing programs in the U.S. and Canada, listing nursing student resources and activities, degree programs, and full-time, part-time, and distance learning options. *The Journal of Continuing Education in Nursing* Peterson's The Future of Nursing explores how nurses' roles, responsibilities,

and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Perspectives on Continuing Education in Nursing Jones & Bartlett Learning

This textbook fills a gap in education for licensed practical nurses (LPN), providing information specific to their own needs and concerns. Firstly, it clarifies the leadership role of LPNs in the healthcare setting, and then identifies the knowledge, skills and abilities related to leadership, management, communication, culture change and person-directed care concepts. It also explains the efficacy of these concepts related to the LPN care of patients in the work setting and reviews the Nurse Practice Act (NPA) enacted in every US state. LPNs play an essential role in the patient care team and we have to ensure they receive

advanced education as practitioners in healthcare settings that reach vulnerable populations such the elderly. They have been considered as the registered nurses' right hand in acute care as well as many home-health settings. They provide basic medical and nursing care, ensure the comfort of patients, discuss health care with patients, and report the status of patients to registered nurses and doctors. But the LPNs are often expected to take on a real leadership role based on the perception that as licensed nurses they already have all the qualifications and education necessary for leadership roles. However, there is a gap in the education they receive and a limited body of literature dedicated to them. Written in honor of all LPNs, this educational textbook fills that gap. With learning objectives, review questions and scenarios, it is a valuable resource for courses for undergraduate students training to be LPNs.
