 Babies can be a joy—and hard work. Now, they can also be a 50-in-1 science project kit! This fascinating and hands-on guide shows you how to re-create landmark scientific studies on cognitive, motor, language, and behavioral development—using your own bundle of joy as the research subject. Simple, engaging, and fun for both baby and parent, each project sheds light on how your baby is acquiring new skills—everything from recognizing faces, voices, and shapes to understanding new words, learning to walk, and even distinguishing between right and wrong. Whether your little research subject is a newborn, a few months old, or a toddler, these simple, surprising projects will help you see the world through your baby's eyes—and discover ways to strengthen newly acquired skills during your everyday interactions.

We are pleased to present the proceedings of the 2003 Atlantic Web Intelligence Conference, AWIC 2003. The conference was located in Madrid, Spain during May 5-6, 2003, organized locally by the Technical University of Madrid. AWIC 2003 aimed to be the first of a series of conferences on Web Intelligence, to be celebrated annually, alternatively in Europe and America, starting in Madrid. It was born as an activity of the recently created WIC-Poland Research Centre and the WIC-Spain Research Centre, both belonging to the Web Intelligence Consortium (WIC) (<http://wi-consortium.org>). AWIC 2003 was supported with grants from the Spanish Ministry for Science and Technology and the European Network of Excellence in Knowledge

Discovery, KDNNet. AWIC 2003 brought together scientists, engineers, computer users, and students to exchange and share their experiences, new ideas, and research results about all aspects (theory, applications, and tools) of artificial intelligence techniques applied to Web-based systems, and to discuss the practical challenges encountered and the solutions adopted. Almost 70 contributions were submitted. After a preliminary evaluation, 60 of these papers were accepted to the conference and were assigned at least two reviewers from the international program committee. Out of this 60, 33 were conditionally accepted, and 32 of them were finally accepted after the conditions set by the reviewers had been met, which resulted in an acceptance ratio of 45%.

Krementsov examines a particular fascination with the dream of immortality and the place of science and fiction in its pursuit in Russia during roughly a decade that followed the country's political revolutions of 1917. It argues that contemporary scientific experiments aimed at the control over life, death, and disease inspired many Russian writers to conduct their own literary experiments with the ideas and techniques offered by experimental biology and medicine, which found expression in both popular-science writings and a new literary genre, science fiction.

Originally published in the middle of the nineteenth century under the title *Electrical Experiments*, this book describes practically all basic electrostatic experiments, demonstrations, devices, and apparatus performed and invented since the time when the first electrostatic effects were noticed in antiquity up to about 1850. The book is unique in its comprehensiveness and provides the essential details for replicating over 400 electrostatic experiments and for reconstructing numerous electrostatic devices. Unfortunately, as is frequently the case with older books, the original editions of Franciss *Electrical Experiments* belong to the category of rare books hardly accessible now even to research scientists, to say nothing of

students, teachers, engineers, amateur scientists, inventors, patent lawyers, and anyone else who may be interested in electrical science and in electrostatics in particular. And yet, the utility of Franciss book to a wide circle of readers is even greater now than when the book was first written because electrostatics has now become a very practical science with many useful applications, and therefore for many persons a familiarity with its basic principles and techniques is now truly important. The purpose of the present edition of Franciss remarkable work is to make it readily available, easily noticeable, and appealing to as wide a circle of present-day readers interested in electrostatics as possible. To achieve the second of these three goals, the title of the book has been changed from *Electrical Experiments* to *Electrostatic Experiments*. The word electrical in the original title, perfectly appropriate in the middle of the nineteenth century when the book was first published, is misleading to present-day readers: the book deals exclusively with electrostatics, whereas electrical is now mostly understood as something relating to the electric current. Furthermore, the word encyclopedia has been incorporated in the subtitle of the book. The scope of the book is truly encyclopedic, and to call it encyclopedia is perfectly justified. To achieve the last of the above-mentioned goals, the book is printed in an entirely new format. Originally the book was printed in a very small typeface, was difficult to read, and its typographic quality was very poor. The illustrations (wood engravings) were very small. The present format is designed for easy readability and pleasing visual appearance. The book is now printed in 11 points Century Schoolbook typeface one of the most readable typefaces in existence. All 148 wood engravings originally contained in the book are enlarged. Both the paperback edition and the hardcover edition are printed on high quality paper. For better durability and ease of use the signatures are sewn together. The hardcover edition is bound in Skyvertex® -- a synthetic leather-like material. Some words and terms used in the book have now either disappeared from the English language or have acquired a different meaning. Therefore the book has been now supplemented by a glossary explaining the most obscure or ambiguous words appearing in the book. Furthermore, taking into account that the most convenient presently-known generator of static electricity for performing electrostatic experiments is the Wimshursts influence machine, invented some thirty years after the publication of Franciss book, the book has been supplemented by a description of this machine. Finally, the book has been supplemented by some literature references.
