Preventive Cardiology provides practical advice on how to structure and run a preventive cardiology programme for existing patients, those at risk of developing cardiovascular disease, and their families, including patient identification and recruitment, assessment of lifestyle and risk factors, and implementing lifestyle change

The increasing frequency of coronary diseases, the still insufficient results of prevention have brought physicians to try to reduce as much as possible the consequences of ischaemic heart disease. Coronary units and new treatments have somewhat reduced the dramatic complications of the acute phase; but after the latter, evil effects of the disease remain at the physiological, psychological and social level. It is the aim of rehabilitation to analyze these problems, to reduce them or to solve them whenever possible. When this conception of "complete coronary care" took the lead, the conditioning effects of heart disease and of immobilization on physical conditions were emphasized: physical training programmes were prepared and their main lines and physiological effects are now fairly well known. But it was soon obvious that the psychological problems raised by the patient and his environment 'are equally important. Their approach is however much more difficult and their treatment particularly complex. So, the Council on Rehabilitation of the International Society of Cardiology is really grateful to Professor Dr. HALHUBER and Dr. Dr. STOCKSMEIER for giving the opportunity

to specialists to discuss together this particular aspect of coronary disease. The discussions have been devoted to the methods of approaching the patient as well as to the therapeutic aspects and the role of psychologists in the rehabilitation programmes: some papers have been devoted also to the possible role of the personality as a risk factor in the development of the disease.

The Guideline offers a manual for physical therapy interventions for patients who are eligible for cardiac rehabilitation on an inpatient or outpatient basis. This Guideline replaces the 2001 KNGF Guideline on Physical Therapy in Cardiac Rehabilitation, which was revised in 2003 on the basis of the AGREE instrument and was reissued in 2005. The first part (A) of the Guideline focuses on physical therapy care for patients with coronary heart disease (in accordance with the 2005 KNGF Guideline on Physical Therapy in Cardiac Rehabilitation), while part B describes the physical therapy care for patient ...

### **Exercise Prescription for Medical Conditions**

W.B. Saunders Company  
Cardiac rehabilitation is of key importance to ameliorate long-term morbidity and mortality resulting from cardiac intervention. However, much of the current literature is dense, unwelcoming and academic in style and format. For those physicians understanding the scope of cardiac rehabilitation there is a need to distill the guidelines and various management options available to them into a concise practical manual. Up until now, all

references have looked at the general options, but there is definite need to investigate the practicalities of individual patient groups. This book fulfills the need for practical guidance among all professionals involved in the management of these patients, from residents and fellows of cardiology and internal medicine, surgical teams, physiotherapy professionals, critical care physicians and family medicine practitioners.

**Cardiovascular and Pulmonary Physical Therapy E-Book** Human Kinetics
