Titles in B.E.S.'s popular series of Pet Handbooks present comprehensive information and helpful advice from breeders, veterinarians, and other pet experts. These full-color books instruct on housing, feeding, healthcare, and more. In *The Betta Handbook*, those interested in these brilliantly colored beginners' fishes will learn how to keep them well-fed and healthy so they can continue to brighten the aquarium tank. This book covers all the Betta varieties.

Guidelines for Evaluating and Expressing the Uncertainty of NIST Measurement Results (rev. Ed.) Simon and Schuster

Covers the latest aquarium gadgets Design a dazzling underwater environment with this bestselling guide! Setting up your first freshwater aquarium can be a daunting task. This friendly guide answers all your questions, from setting up your tank and selecting fish to the water, chemicals, plants, and much more. There's also expanded guidance on combining different species of fish, maintaining a tank, cleaning gravel, and dealing with common problems such as algae. Discover how to * Choose the right aquarium * Select the best fish * Get good deals on equipment * Maintain a clean, healthy environment * Handle tank pitfalls * Breed your fish

WINNER OF THE 2017 NASW SCIENCE IN SOCIETY JOURNALISM AWARD A FINALIST FOR THE 2017 PEN/E. O. WILSON LITERARY SCIENCE WRITING AWARD LONGLISTED FOR THE ANDREW CARNEGIE MEDAL FOR EXCELLENCE A LIBRARY JOURNAL BEST SCIENCE BOOK OF THE YEAR "[A] curiously edifying book." —The New York Times Book Review "With the taut suspense of a spy novel, Voigt paints a vivid world of murder, black market deals, and habitat destruction surrounding a fish that's considered, ironically, to be a good-luck charm." —Discover "[An] immensely satisfying story, full of surprises and suspense....Things get weird fast." —The Wall Street Journal An intrepid journalist's quest to find a wild Asian arowana—the world's most expensive aquarium fish—takes her on a global tour in this "engaging tale of obsession and perseverance...and an enthralling look at the intersection of science, commercialism, and conservationism" (Publishers Weekly, starred review). A young man is murdered for his pet fish. An Asian tycoon buys a single specimen for \$150,000. Meanwhile, a pet detective chases smugglers through the streets of New

York. With "the taut suspense of a spy novel" (Discover) *The Dragon Behind the Glass* tells the story of a fish like none other. Treasured as a status symbol believed to bring good luck, the Asian arowana, or "dragon fish," is a dramatic example of a modern paradox: the mass-produced endangered species. While hundreds of thousands are bred in captivity, the wild fish as become a near-mythical creature. From the South Bronx to Borneo and beyond, journalist Emily Voigt follows the trail of the arowana to learn its fate in nature. "A fresh, lively look at an obsessive desire to own a piece of the wild" (Kirkus Reviews), *The Dragon Behind the Glass* traces our fascination with aquarium fish back to the era of exploration when naturalists stood on the cutting edge of modern science. In an age when freshwater fish now comprise one of the most rapidly vanishing groups of animals, Voigt unearths a surprising truth behind the arowana's rise to fame—one that calls into question how we protect the world's rarest species. "Not since Candace Millard published *The River of Doubt* has the world of the Amazon, Borneo, Myanmar, and other exotic locations been so colorfully portrayed as it is now in Emily Voigt's *The Dragon Behind the Glass*...a must-read" (Library Journal, starred review).

Process Plant Design John Wiley & Sons

Industrial high pressure processes open the door to many reactions that are not possible under 'normal' conditions. These are to be found in such different areas as polymerization, catalytic reactions, separations, oil and gas recovery, food processing, biocatalysis and more. The most famous high pressure process is the so-called Haber-Bosch process used for fertilizers and which was awarded a Nobel prize. Following an introduction on historical development, the current state, and future trends, this timely and comprehensive publication goes on to describe different industrial processes, including methanol and other catalytic syntheses, polymerization and renewable energy processes, before covering safety and equipment issues. With its excellent choice of industrial contributions, this handbook offers high quality information not found elsewhere, making it invaluable reading for a broad and interdisciplinary audience.

Edward Eggleston (December 10, 1837 - September 3, 1902) was an American historian and novelist. Eggleston was born in Vevay, Indiana, to Joseph Cary Eggleston and Mary Jane Craig. The author George Cary Eggleston was his brother. As a child, he was too ill to regularly attend school, so his education was primarily provided by his father. He was ordained as a Methodist minister in 1856. He wrote a number of tales, some of which, especially the "Hoosier" series, attracted much attention. Among these are *The Hoosier Schoolmaster*, *The Hoosier Schoolboy*, *The End of the World*, *The Faith Doctor*, and *Queer Stories for Boys and Girls*. Eggleston was elected a member of the American Antiquarian Society in 1893. His boyhood home at Vevay, known as the Edward and George Cary Eggleston House, was listed on the National Register of Historic Places in 1973. His summer home, Owl's Nest, in Lake George, New York, eventually became his year-round home. Eggleston died there in 1902, at the age of 64. Owl's Nest was declared a National Historic Landmark in 1971. His daughter, the writer, Elizabeth Eggleston Seelye, was married to Elwyn Seelye, the founder of the New York State Historical Association. (wikipedia.org)

In *High Pressure Processing of Foods*, an array of international experts interrelate leading scientific advancements that use molecular biology techniques to explore the biochemical mechanisms of spore germination and inactivation by high pressure; investigate the inactivation of different spore species as functions of processing parameters such as pressure, temperature, time, food matrix, and the presence of anti-microbials; propose predictive mathematical models for predicting spore inactivation in foods treated with HPP; address commercial aspects of high pressure processing that include the high pressure equipment and packaging used to achieve the sterilization of bacterial spores in foods; and provide an assessment of the quality of food products preserved by HPP.

High Pressure Processing of Foods is the landmark resource on the mechanisms and predictive modeling of bacterial spore inactivation by HPP.

The Chemistry of Superheavy Elements *Howell Book House

This book describes the fascinating wealth of activities as they occur in the design, construction and commissioning of a chemical plant - a jigsaw puzzle of the work of chemical engineers, chemists, constructors, architects, electrical engineers, process automation engineers, economists and legal staff. The author first takes the reader through the conceptual phase, in which the economic relevance and environmental impact need to be considered and supplemented by accurate estimates of capital requirements and profitability. This phase ends with the choice of an appropriate engineering firm and the conclusion of the contract, after which the reader is guided through all aspects of the implementation phase from the engineering of the chemical plant to commissioning, equipment and material procurement, the erection phase and the successful test run, after which the new facility is handed over to its owner. The book also illustrates many potential sources of errors by means of examples from practice, and how, aside professional skills, teamwork and communication are also absolutely essential to keep such a complex project on track.

Learn how to create and maintain your own underwater ecosystem. *Aquascaping* is the art of creating beautiful aquariums with natural materials and live plants. From the brilliance of Takashi Amano and numerous other innovators, aquascapes have become a popular way to enjoy aquariums. In *Aquascaping: A Step-by-Step Guide to Planting, Styling, and Maintaining Beautiful Underwater Aquariums*, planted aquarium expert George Farmer teaches how to create the perfect aquascape. Included in this book are full-color photographs that will supply readers with: Step-by-step instructions on setting up your tank Different styling suggestions that best suit your landscape How to pick plants, rocks, driftwood, substrate, and aquatic life Understanding the chemistry and biology involved in keeping a healthy aquarium Maintenance and upkeep And much more Creating an underwater ecosystem is not only a rewarding experience, but can bring much peace and relaxation to your life. So whether you're a novice aquarist or seasoned aquascaper, *Aquascaping* will teach

you all the tricks of the trade so that your beautiful aquarium can be enjoyed by family, friends, and, most importantly, yourself.

This book is the first to treat the chemistry of superheavy elements, including important related nuclear aspects, as a self contained topic. It is written for those - students and novices -- who begin to work and those who are working in this fascinating and challenging field of the heaviest and superheavy elements, for their lecturers, their advisers and for the practicing scientists in the field - chemists and physicists - as the most complete source of reference about our today's knowledge of the chemistry of transactinides and superheavy elements. However, besides a number of very detailed discussions for the experts this book shall also provide interesting and easy to read material for teachers who are interested in this subject, for those chemists and physicists who are not experts in the field and for our interested fellow scientists in adjacent fields. Special emphasis is laid on an extensive coverage of the original literature in the reference part of each of the eight chapters to facilitate further and deeper studies of specific aspects. The index for each chapter should provide help to easily find a desired topic and to use this book as a convenient source to get fast access to a desired topic. Superheavy elements - chemical elements which are much heavier than those which we know of from our daily life - are a persistent dream in human minds and the kernel of science fiction literature for about a century.

Industrial Gases Processing Simon and Schuster

Almost every modern manufacturing process relies on industrial gases, and sales of such gases are expected to rise by around 45% over the next five years. Here, experienced and authoritative experts from one of the two world's largest producer of industrial gases impart their knowledge on atmospheric, noble and synthesized gases, carbon dioxide, LNG, acetylene and other fuel gases, as well as special and medical gases. Modern applications, e.g., the use of hydrogen in fuel cells, are included as well. This practical text is rounded off by a section on logistics.

This study offers the first comprehensive account of Emerson's philosophy since his philosophical rehabilitation began in the late 1970s. It builds on the historical reconstruction proposed in the author's previous book, *Emerson's Metaphysics*, and like that study draws on the entire Emerson corpus—the poetry and sermons included. The aim here is expository. The overall though not exclusive emphasis is on identity, as the first term of Emerson's metaphysics of identity and flowing or metamorphosis. This metaphysics, or general conception of the nature of reality, is what grounds his epistemology and ethics, as well as his esthetic, religious, and political thought. Acknowledging its primacy enables a general account like this to avoid the anti-realist overemphasis on epistemology and language that has often characterized rehabilitation readings of his philosophy. After an initial chapter on Emerson's metaphysics, the subsequent

chapters devoted to the other branches of his thought also begin with their "necessary foundation" in identity, which is the law of things and the law of mind alike. Perception of identity in metamorphosis is what characterizes the philosopher, the poet, the scientist, the reformer, and the man of faith and virtue. Identity of mind and world is felt in what Emerson calls the moral sentiment. Identity is Emerson's answer to the Sphinx-riddle of life experienced as a puzzling succession of facts and events.
