Autism Spectrum Disorder in the Ontario Context is the first book to offer a thorough introduction to Autism Spectrum Disorder (ASD) in Ontario. Highlighting examples, research, and interventions specific to Ontario, this manual provides an abundance of information in one central location, making it an indispensable tool for any Ontario professional working with individuals with ASD. This comprehensive text begins with a brief history of ASD and an overview of its contemporary understandings, including current diagnostic criteria. Covering a range of evidence-based interventions that have been shown to be effective for individuals with ASD—and supplemented with graphics, checklists, and hands-on strategies for application—this book provides essential information to inform practitioners. The concluding section on ASD across the lifespan explores how these interventions are delivered within agencies throughout Ontario, from preschool through to adulthood, and addresses relevant issues and topics for each age group. Featuring chapter summaries, definitions of key terms, lists of further resources, and reflective questions, this highly accessible and pedagogically rich text is vital reading not only for current and future practitioners, but also for parents of children with ASD.

This eagerly awaited textbook covers everything the graduate student in probability wants to know about Brownian motion, as well as the latest research in the area. Starting with the construction of Brownian motion, the book then proceeds to sample path properties like continuity and nowhere differentiability. Notions of fractal dimension are introduced early and are used throughout the book to describe fine properties of Brownian paths. The relation of Brownian motion and random walk is explored from several viewpoints, including a development of the theory of Brownian local times from random walk embeddings. Stochastic integration is introduced as a tool and an accessible treatment of the potential theory of Brownian motion clears the path for an extensive treatment of intersections of Brownian paths. An investigation of exceptional points on the Brownian path and an appendix on SLE processes, by Oded Schramm and Wendelin Werner, lead directly to recent research themes.
