Widespread shortages in key inputs are common in mixed economies of developing countries. These shortages appear to occur at the same time that relatively high rates of capacity underutilization in manufacturing industries are observed. This paper develops a simple model

which explains the existence of excess capacity when there are quantitative restrictions on key inputs. This model is tested using data for manufacturing industries in India, and the results indicate that shortages in domestic rather than imported inputs imposed binding constraints on capacity utilization rates.

Persistent unemployment and rising wage differences at the expense of low-skilled workers has characterized the labor market in most developed countries. Since the last economic crisis, unemployment rates and pay inequalities have increased among workers under 25 years of age, thus creating an ever-widening financial gap

for an entire generation. Those who do not have a qualification or post-secondary diploma often find themselves in precarious jobs at minimum wage. Countries are now working to adopt reforms to improve the situation of young people in the labor market. International Perspectives on the Youth Labor Market: Emerging Research and Opportunities provides emerging

research exploring the theoretical and practical aspects of financial inequality and applications within global economics. Unlike literature that focuses only on developed countries, this book also addresses emerging economies whose labor market is often characterized by a dualism that makes the situation of young workers worse. Featuring coverage on a broad range of

topics such as unemployment rate, labor reform, and job insecurity, this book is ideally designed for economists, government officials, policymakers, executives, managers, business professionals, researchers, academicians, and students. International Perspectives on the Youth Labor Market: Emerging Research and Opportunities Roma TrE-Press  
It is becoming increasingly clear that a new

economics is required for investigating modern dynamic economies and the coming social world. Important features of those economies, such as innovation, uncertainty and entrepreneurship, are usually considered capitalist features. This may have been true historically, but this book argues that the contrary will be true for the future: the full and

efficient operation of those supposed capitalist features will increasingly require the overcoming of capitalist civilization. In this book, Angelo Fusari constructs a theoretical framework for the interpretation and management of modern dynamic economies which demonstrates that institutional transformations are essential if we are to move beyond the current

consumer-capitalist age and the age of the domination of financial capital. A New Economics for Modern Dynamic Economies opens with a consideration of the basic aspects of modern dynamic economies and proceeds to develop a representation of the whole economic system centred on the interrelationships between entrepreneurship, innovation and radical uncertainty in

a 'dynamic competition' process. This model provides an explanation of business cycles that largely differs from current explanations as it derives from the notion of dynamic competition. The book is then extended from the sectoral to the micro level and then to the level of the firm. The second half of the book is concerned with operational problems and in particular with the

integration of this analysis of cycles with the notion of historical phases of development. The final chapter explores the route of the transition from capitalism to a new economic and social order - a transition of vital importance, both for the contemporary world and for the coming world. This volume is of great interest to those who study political economy, macroeconomics and economic

theory and philosophy. The book shows the possibility of a scientific explanation of important ethical principles as indispensable to the organizational efficiency of the social system: for instance, the necessity and the way to conciliate productive efficiency, social justice and individual freedom. Profiles-- economics Basic Books Il volume raccoglie alcuni contributi

presentati durante le Giornate della Ricerca, tenute presso il Dipartimento di Economia dell'Università Roma Tre, il 16 e 17 maggio 2019. Oltre a due sessioni plenarie - di apertura e di chiusura - si sono svolte otto sessioni parallele, durante le quali sono stati presentati ben 30 contributi. I temi trattati hanno rispecchiato i principali interessi di ricerca del Dipartimento:

la teoria economica micro e macro; le politiche di bilancio, ambientali e di integrazione; la distribuzione personale e funzionale del reddito; il commercio internazionale ; la finanza e il sistema bancario; i metodi quantitativi. Economics Taylor & Francis The 2007-09 financial crisis and economic downturn inflicted considerable hardship on the U.S.

population. This book argues that the financial crisis and ensuing recession reflected not just a malfunctioning of the financial system - but also inequalities and insecurities in access to livelihoods that favor well-off groups and leave ordinary people shouldering undue burdens of downside risk. This book, a collection of original papers by

leading social economists and scholars in related fields, examines social, distributional, and ethical dimensions of the downturn. It should be of broad interest to the social-science and economic-policy communities. The Dynamics of Opportunity in America ScholarlyEditions Unemployment levels have received a great deal of attention and discussion in recent years. However, another labor

category—and underemployment—has virtually been ignored. Underutilized or underemployed workers are those who are experiencing inadequate hours of work, insufficient levels of income, and mismatch of occupation and skills. Marginal Workers, Marginal Jobs addresses two principal issues: how can we measure underemployment, and how can we explain its prevalence? To answer the

first question, Teresa Sullivan examines yardsticks in use, demonstrates their inadequacy, and develops a different measure that is easy to interpret and is usable by both demographers and economists. In answering the second, she analyzes 1960 and 1970 census data to determine the relative effects of population composition and job structure on levels of

employment. One of the important contributions of Sullivan's study is to distinguish between marginal workers and marginal jobs in explaining underutilization. Previous explanations, including the widely used dual market theory, have not stressed this analytic distinction. In addition, her work accounts separately for the various types of marginality and seeks to show the condition of workers who

are marginal on more than one count—for example, those who are both young and black, or old and female. A provocative study based on large samples of the U.S. population, this book raises important questions about a critical subject and makes a significant contribution to the theory of underutilization.

making short-term decisions, planning deficiencies will likely result. Likewise, if managers use short-term forecasts to inform their long-term strategic vision, failure could easily ensue. Graf provides the tools necessary to sidestep the common pitfall of using the wrong forecasting technique for the wrong purpose. This is not a detailed examination of the

mathematical and statistical tools of empirical economic research. Instead, forecasting methods are explained so that they can be understood by the managers who employ them in their decision making. Graf demonstrates that understanding and—in special cases—cooperation between forecast developers and users is crucial to creating an effective forecast that

results in informed management decisions. He discusses traditional, long-term, macroeconomic, and global economic forecasting; the scenario technique as a central instrument of long-term forecasting; and short-term economic and market forecasting.

economics, Economic Pedagogy, grade: A, University of Nairobi, language: English, abstract: Epistemology encompasses various processes of knowledge acquisition, development, and retention. Every culture has distinct methods of acquiring, sharing, and storing knowledge. However, many African societies have lost their conventional epistemology in favor of western

epistemology in education and knowledge development within the continent. As such, the proposed study seeks to explore the underutilization of African epistemology in research in African contexts to draw possible implications for the development of African psychology in South Africa. It aims at narrowing the existing knowledge gap on the underutilization of African epistemology.

To achieve the objective of the study, the researcher will follow the interpretivism research philosophy, explaining that reality is a social construction. In this regard, qualitative methods of data collection and analysis will be used to answer the research questions. Twenty-five new runways would

eliminate most air travel delays in America; fifty patent owners are blocking a major drug company from creating a cancer cure; 90 percent of our broadcast spectrum sits idle while American cell phone service suffers. These problems have solutions that can jump-start innovation and help save our troubled economy. So, what's holding us back? Michael Heller, a leading authority on property, reveals that

while private ownership creates wealth, too much ownership means that everyone loses. Startling and accessible, *The Gridlock Economy* offers insights on how we can overcome this preventable paradox.

The field of economics has always had an unstable reputation in the academic world, and in the public eye as well: some consider economists to be scientists, while others see them as disguised ideologues. The resulting insecurities have driven economists to continually redefine their discipline, from its scope and its methods to its content.  
Economics:

The Culture of a Controversial Science incisively describes the profession of economics as it has developed in response to these peculiar challenges.

This volume presents the findings and recommendations of the American Educational Research Association's (AERA) Commission on Research in Black Education (CORIBE) and offers new directions for research and practice. By commissioning an independent group of scholars of diverse perspectives and voices to investigate major issues hindering the education of Black people in the U.S., other Diaspora contexts, and Africa, the AERA sought to place issues of Black education and research practice in the forefront of the agenda of the scholarly community. An unprecedented critical challenge to orthodox thinking, this book makes an epistemological break with mainstream scholarship. Contributors present research on proven solutions--best practices--that prepare Black students and others to achieve at high levels of academic excellence and to be agents of their own socioeconomic and cultural transformation. These analyses and empirical findings also link the crisis in Black education to embedded
