The energy industry is boiling over with changes. Deregulation, new opportunities in foreign fields and markets and environmental challenges are rushing together head-on to shape the energy and utilities business of the future. Extremely deep offshore wells in the Gulf of Mexico and offshore of West Africa are being drilled at immense cost. Meanwhile China has become a major energy importer and Russia has become a major exporter. In the U.S., Europe and Japan, renewable and alternative energy sources are developing quickly, including big breakthroughs in wind power and fuel cells. This exciting new

reference book covers everything from major oil companies to electric and gas utilities, plus pipelines, refiners, retailers, oil field services and engineering. Petroleum topics include upstream and downstream. Additional topics include coal, natural gas and LNG. More than a dozen statistical tables cover everything from energy consumption, production and reserves to imports, exports and prices. Next, our unique profiles of the Energy 500 Firms are also included, with such vital details as executive contacts by title, revenues, profits, types of business, web sites, competitive advantage, growth plans and more. Purchasers of either the book or PDF version can receive a free copy of the company profiles database on CD-ROM, enabling key word search and export of key information, addresses, phone numbers and executive names with titles for every company profiled.

A scientifically sound approach is needed to ensure that flushable consumer products are compatible with household plumbing fixtures, as well as wastewater collection and treatment systems. In addition to assessing disposal system compatibility, an assessment approach should also ensure that flushable consumer products do not become an aesthetic nuisance in surface waters and soil environments. This document presents an overall approach for assessing the fate and compatibility of consumer products in wastewater disposal systems. While the focus of this document is on the United States, it is believed that the conceptual approach and many of the test methods could be used to assess the compatibility of flushable consumer products in wastewater disposal systems throughout the world.

**Plunkett's Energy Industry Almanac 2007** Plunkett Research, Ltd.

Covers things from major oil companies to electric and gas utilities, plus pipelines, refiners, retailers, oil field services and engineering. This title includes topics such as coal, natural gas and LNG. It includes statistical tables that cover topics ranging from energy consumption, production and reserves to imports, exports and prices.

*Selected Water Resources Abstracts* Plunkett Research, Ltd. Vols. for 2012- contain only executive summaries of articles.

Job hunters aiming for employment in the safety and quality assurance field will welcome this resource for resume and cover letter preparation! The 192-page book gives valuable tips on interviewing, but the the "meat" of the book is the section containing samples of resumes and cover letters used by real people to gain employment related to safety and quality assurance.

Utility Corporations

This survey provides data on 338 water and wastewater utilities. Populations served range from 900 to 9 million, providing comparison for every size utility. Survey data is shown in a series of easy-to-read spreadsheets, ideal for your analysis and comparisons. Because data is organized by system size, it's fast and easy to isolate and compare utilities that are similar to your own.
