 The COVID-19 pandemic has undoubtedly pushed organizations into rethinking ways and means to continue to operate their businesses, especially with the restrictions on safe distancing. The world over is adjusting to COVID-19, with social distancing orders having compelled people to find alternatives to face-to-face meetings. As a result, video conferencing solutions have never been more popular. In order to conduct business without disruption, professionals have now turned to video conferencing to stay connected with their team members and customers. With the need to social distancing and working remotely, video conferencing has provided a more personalized approach. It

serves as the closest alternative to a face-to-face meeting by providing a forum for managers and leadership to stay in touch with their team members just as if they are face-to-face, by addressing queries, concerns and other issues on the spot. The video conferencing services have seen such a huge surge in popularity and usage recently as the deadly corona virus is pushing more people into remote work environments. People are also using it for everything, not just business, from family-time-to-gathers to lunchtime hangouts with friends and so forth. So love them or hate them, meetings are a part of almost every job, whether you're working remotely or working in an office. Since meetings are here to stay, despite the restrictions on safe distancing, effective communication will all the more be the key during this trying time and outside of it to keep businesses running smoothly.

Proper communication plays a critical role in keeping global employees connected, as well as staying in contact with customers who reside in different locations. This is where the subject of the right etiquette required during video-conferencing will play a key role- enabling you and your team to stand out from the rest. Just as how there are norms and etiquette required for any face-to face meeting, video- conferencing too has a set of guidelines that if followed, will ensure the meeting is productive and effective. Good video conferencing etiquette is really just common courtesy and respect for the people in your meeting while creating an environment with the least amount of disruption. And as with all virtual communication tools, we need to ensure that meetings are professional, efficient and productive. The usual principles of polite behavior required with any meeting

apply for video-conferencing too, but the key is to understand how the use (or misuse) of technology can effect these meetings. The ideal video conference should get as close as possible to the dynamics of a real face-to-face meeting from the participants' point of view, and for that the role of everyone in the meeting (not just the chairperson or host) is to ensure that the system is not filtering out critical interactions, allowing discourtesy to sneak in. There's just no substitute for good manners in all of our daily interactions, and good manners are appreciated more than ever in workplace meetings. This is especially true during online video conferences and meetings. Whether you a Head in a Corporate, a Professor or Lecturer in a College, or Teacher in a School, or an Interviewer recruiting candidates or just someone demonstrating and selling a product or service- with so much of a shift happening today to online platforms, I am confident that this little book: 'The Professional Business Video-Conferencing Etiquette-Handbook & Guide' will address most of the above stated issues and challenges, enabling you and your team to project the right positive impression, and build on your organization or institutions credibility and thus be able to have that competitive advantage over others.

Video Based Machine Learning for Traffic Intersections describes the development of computer vision and machine learning-based applications for Intelligent Transportation Systems (ITS) and the challenges encountered during their deployment. This book presents several novel approaches, including a two-stream convolutional network architecture for vehicle detection, tracking, and near-miss detection; an unsupervised approach to detect near-misses in fisheye intersection videos using a deep learning model combined with a camera calibration and spline-based mapping method; and algorithms that utilize video analysis and signal timing data to accurately detect and categorize events based on the phase and type of conflict in pedestrian-vehicle and vehicle-vehicle interactions. The book makes use of a real-time trajectory prediction approach, combined with aligned Google Maps information, to estimate vehicle travel time across multiple intersections. Novel visualization software, designed by the authors to serve traffic practitioners, is used to analyze the efficiency and safety of intersections. The software offers two modes: a streaming mode and a historical mode, both of which

are useful to traffic engineers who need to quickly analyze trajectories to better understand traffic behavior at an intersection. Overall, this book presents a comprehensive overview of the application of computer vision and machine learning to solve transportation-related problems. Video Based Machine Learning for Traffic Intersections demonstrates how these techniques can be used to improve safety, efficiency, and traffic flow, as well as identify potential conflicts and issues before they occur. The range of novel approaches and techniques presented offers a glimpse of the exciting possibilities that lie ahead for ITS research and development. Key Features: Describes the development and challenges associated with Intelligent Transportation Systems (ITS) Provides novel visualization software designed to serve traffic practitioners in analyzing the efficiency and safety of an intersection Has the potential to proactively identify potential conflict situations and develop an early warning system for real-time vehicle-vehicle and pedestrian-vehicle conflicts [Black Belt](#) Penguin

Offering a mix of both theory and practice, it was developed from experience in training for thousands of organizations and from analyzing extensive academic and industry research to determine what works in the digital age. The goal is to show how to use training to create performance improvement in the most time-efficient and cost-effective way possible. To accomplish that, Taming the Terrible Too's of Training does the following: 1. Identifies dysfunctional training processes that are common in organizations today. 2. The methodology for accomplishing this is called Right learning--workforce development that addresses the right need at the right time in the right amount and with the right design. Forget the 10,000 hour rule— what if it's possible to learn the basics of any new skill in 20 hours or less? Take a moment to consider how many things you want to

learn to do. What's on your list? What's holding you back from getting started? Are you worried about the time and effort it takes to acquire new skills—time you don't have and effort you can't spare? Research suggests it takes 10,000 hours to develop a new skill. In this nonstop world when will you ever find that much time and energy? To make matters worse, the early hours of practicing something new are always the most frustrating. That's why it's difficult to learn how to speak a new language, play an instrument, hit a golf ball, or shoot great photos. It's so much easier to watch TV or surf the web . . . In *The First 20 Hours*, Josh Kaufman offers a systematic approach to rapid skill acquisition— how to learn any new skill as quickly as possible. His method shows you how to deconstruct complex skills, maximize productive practice, and remove common learning barriers. By completing just 20 hours of focused, deliberate practice you'll go from knowing absolutely nothing to performing noticeably well. Kaufman personally field-tested the methods in this book. You'll have a front row seat as he develops a personal yoga practice, writes his own web-based computer programs, teaches himself to touch type on a nonstandard keyboard, explores the oldest and most complex board game in history, picks up the ukulele, and learns how to windsurf. Here are a few of the simple techniques he teaches: Define your target performance level: Figure out what your desired level of skill looks like, what you're trying to achieve, and what you'll be able to do when you're done. The more specific, the better. Deconstruct the skill: Most of the things we think of as skills are actually bundles of smaller subskills. If you break down the subcomponents, it's easier to figure out which ones are most important and practice those first. Eliminate barriers to practice: Removing common distractions and unnecessary effort makes it much easier to sit down and focus on deliberate practice. Create fast feedback loops: Getting accurate, real-time information about how well you're

performing during practice makes it much easier to improve. Whether you want to paint a portrait, launch a start-up, fly an airplane, or juggle flaming chainsaws, *The First 20 Hours* will help you pick up the basics of any skill in record time . . . and have more fun along the way.

When you'd rather learn away from your PC, or you just want to quickly look something up, search the eBook or flip through the paperback book to find the information you need. Similar video training costs well over \$120 or more, or worse, requires you to pay a monthly membership fee that might cost you thousands. Similar books cost over twice this amount. You also get over 150 *Lightroom* presets, which usually cost more than \$100, and access to our private *Lightroom* group on Facebook so you can ask questions and get feedback. Tony covers every aspect of *Lightroom* in-depth, but structures his teaching so that both beginner and advanced photographers can learn as efficiently as possible.
