GOODMAN GRAHAM

Municipal Solid Waste Management in Asia and the Pacific Islands DIANE Publishing

This Guide has been developed particularly for solid waste management practitioners, such as local government officials, facility owners and operators, consultants, and regulatory agency specialists. Contains technical and economic information to help these practitioners meet the daily challenges of planning, managing, and operating municipal solid waste (MSW) programs and facilities. The Guide's primary goals are to encourage reduction of waste at the source and to foster implementation of integrated solid waste management systems that are cost-effective and protect human health and the environment. Illustrated.

Scientific Basis for Nuclear Waste Management Springer Nature

The book's aim is to integrate the topics of fluid and structural dynamics, a developing field in research and academia. The purpose of this integration is to identify the causes of structural vibration problems which can be experienced on large engineering structures such as buildings, bridges or oil installations, and to prevent them at the design stage. There are currently no books of this type offered to the primary target group, structural engineers. There are textbooks on wind loading, structural dynamics, ocean engineering, presented as separate topics, but very little material in the literature which attempts to integrate fluid-structural dynamics. Integration of accurate description of fluid loading and the structural response can provide important knowledge to structural engineers in their analysis and design of structures. The book will, therefore, be of interest to engineers in all areas who have an interest in fluids, structures and general vibration problems. The book will contribute to the next generation of tools for improving the performance of large structures in coastal areas, in the ocean, and other areas where large structures will be built. It will prepare the new generation of engineers for thorough plans of mitigation strategies in early phases of the analysis and design of structures, thus potentially saving human lives during natural hazard events. · Integrates the study of fluid and structural dynamics · Explains and assesses damping techniques · Many worked examples and solutions

Household Hazardous Waste Management Routledge

This book provides a comprehensive, up-to-date overview of the different environmental strategies adopted in the football world to foster sustainability. The authors lay out useful insights, both for scholars and practitioners, to improve good governance in football organisations by empowering environmental organisational and operational actions. As well as examining practical methods of implementing green initiatives, the book discusses their added value from different perspectives including football fans, football managers and policymakers. By identifying the most important green actions for the dissemination of environmentally friendly behaviours at both individual and organisational levels, the book demonstrates how football organisations can use operational and organisational methods to develop an environmental sustainability strategy. The book contributes to developing the role of the football world by covering different facets of sustainability such as the circular economy, climate change, green marketing, fans engagement and more. It will be a valuable resource for scholars and students of environmental management, sustainable business and corporate social responsibility, as well as professionals working in the football industry.

Waste Management and the Environment IX DIANE Publishing

Risk Management for Events is a comprehensive and practical guide that supports academic and professional development programs to prepare individuals for entering or advancement in the international events industry. Events of all types are produced every day for all manner of purposes, attracting all sorts of people. Creating and managing the environment in which these people will gather carries with it awesome responsibilities — legal, ethical, and financial. To provide a safe and secure setting and to operate in a manner that ensures that the hosting organizations or individuals

achieve their objectives in a proper and profitable way, event risk management must be fully integrated into all event plans and throughout the event management process. This new edition has been revised and updated to include: New case studies and examples from a wide range of international destinations and different types of events. Updated statistics and data throughout. New content on emergent risk, on-site decision-making, terrorism, and public health, including the COVID-19 pandemic, and corruption within events. Updated online material, including a case study archive and weblinks to useful resources. This will be an invaluable resource for all those studying events management.

Waste Management and the Environment VIII Taylor & Francis

Managing Sport Events presents the principles and practices of effective event management, taking readers through the entire process from event conception through postevent evaluation.

Sustainable Event Management Butterworth-Heinemann

Across the world each year events of every shape and size are held: from community events, school fairs and local business functions through to the world's largest festivals, music events, conferences and sporting events. As well as causing celebration and giving voice to issues, these public parties use up resources, send out emissions and generate mountains of waste. Events also have the power to show sustainability in action and every sustainably produced event can inspire and motivate others to action. Written by a leader in event sustainability management, this book is a practical, step-by-step guide taking readers through the key aspects of how to identify, evaluate and manage event sustainability issues and impacts and to use the event for good – it's for events of any style and scale, anywhere in the world. Now in its third edition, this is the indispensable one-stop guide for event professionals and event management students who want to adjust their thinking and planning decisions towards sustainability, and who need a powerful, easy-to-use collection of tools to deliver events sustainably.

Sustainable Event Management Human Kinetics

This collection of proceedings from the 6th International Symposium provide a forum for the presentation, discussion and debate of state-of-the-art and emerging technology in the field of environmental management.

Waste Management: Concepts, Methodologies, Tools, and Applications Routledge

Festivals and events vary from small, neighbourhood celebrations through to mega gatherings, and both can be attractive to tourists. They come with their own unique challenges and opportunities however, which means destinations must carefully consider their responsibility to local people, and host them in a sustainable manner. Covering important issues such as the marketing, branding and promotion of events, this book also unravels the opportunities and challenges associated with sustainable festivals and events. It uses an array of case studies and a global author team to provide an important resource for tourism and event researchers and professionals.

Proceedings of the California Household Hazardous Waste Management Conference

Contents: keynote speaker: Dana Duxbury, The Waste Watch Center; how to's: starting a program; money in, money out: costs & funding Household Hazardous Waste (HHW) programs; panel: perspectives on product stewardship: roles & credibility; oil wrestling: managing used oil grants; disaster planning & HHW collection programs; managing a temporary collection program; recycling & reuse; permanent facilities; health & safety: what is adequate? latex paint recycling; managing conditionally exempt small quantity generator wastes; poison control center & pesticide exposure.

Decision-Maker's Guide to Solid-Waste Management Routledge

Events of all types are produced every day for all manner of purposes, attracting all sorts of people. Creating and managing the environment in which these people will gather carries with it awesome responsibilities — legal, ethical, and financial. To provide a safe and secure setting and to operate in a manner that ensures the hosting organizations or individuals achieve their objectives in a proper and profitable way, event risk management must be fully integrated into all event plans and

throughout the event management process. Risk Management for Meetings and Events examines the practices, procedures, and safeguards associated with the identification, analysis, response planning, and control of the risks surrounding events of all types. Written by an experienced author it: * Provides a solid, easy-to-read conceptual foundation based on proven risk management techniques * Includes ready-to-use templates designed specifically as learning exercises for students and professionals * Comprehensively discusses effective strategies for managing the risks associated with design, planning and production of public and private events Risk Management for Meetings and Events is a comprehensive and practical guide which supports academic and professional development programs that prepare individuals for entering or advancement in the meeting and event management industry.

Third International Conference on New Frontiers for Hazardous Waste Management Taylor & Francis

This monograph contains the proceedings of the 9th Annual Symposium on Geo-aspects of Waste Management, February 1-6, 1987 held at Colorado State University, Fort Collins, Colorado.

Sustainable Waste Management Springer

Contemporary events management is a diverse and challenging field. This introductory textbook fully explores the multidisciplinary nature of events management and provides the student with all the practical skills and professional knowledge they need to succeed in the events industry. It introduces every core functional area of events management, such as marketing, finance, project management, strategy, operations, event design and human resources, in a vast array of different event settings from sport to political events. This new edition has been updated to include: New and updated content on technological developments in events such as virtual/hybrid events, artificial intelligence, virtual/augmented reality, holograms in music events, software for event planning and projection mapping. New content on eSports, the sustainability sector, employability skills, policy changes, diversity and inclusion, ethics and responsibility in events, and contemporary event safety and security issues including the threat of terrorism. New and updated case studies that cover a wider range of regions. A fully updated and extended companion website that includes web and video links, quizzes and a case study archive for students, as well as PowerPoint slides for instructors and a brand-new instructor manual full of teaching strategy ideas. Every topic is brought to life through vivid case studies, personal biographies and examples of best practice from the real world of events management. Written by a team of authors with many years' experience of working in the events industry, *Events Management: An Introduction* is the essential course text for any events management programme.

Tank Closure and Waste Management for the Hanford Site John Wiley & Sons

Waste Management is one of the key problems of modern society due to the ever-expanding volume and complexity of discarded domestic and industrial waste. Society is increasingly aware of the need to establish better practices and safer solutions for waste disposal. This requires further investigation into disposal methods and recycling as well as new technologies to monitor landfills, industrial mining wastes and chemical and nuclear repositories. This creates a need for more research on current disposal methods such as landfills, incineration, chemical and effluent treatment, as well as recycling, clean technologies, waste monitoring, public and corporate awareness and general education. Unfortunately, many of the policies adopted in the past were aimed at short term solutions without due regard to the long term implications on health and the environment, leading in many cases to the need to take difficult and expensive remedial action. The desired direction of Waste Management is towards sustainable strategies. The approach which has emerged as the most promising has been called 4Rs, where reduction, reuse, recycling and recovery are seen as the best actions. This largely decreases the volume of waste that needs final disposal. Recovery refers to the establishment of two new classifications, those of Secondary Raw Materials (SRM) and of Refuse Derived Fuel (RDF). They both relate to useful products obtained from waste and make a shift from the mere recycle or reuse - mostly seen as a way to reduce dumping - to the valuable employment of such matter within the production cycle. Another aspect of this revolution is happening subtly and gradually by people buying waste; particularly eWaste and some types of plastic, the so-called technical waste. This is happening due to the strong demand and high price of certain new materials and the possibility of sorting out waste in developing regions of the world. As a result, a market in Secondary Raw Materials (SRM) has developed. Covering various areas under the topic of Waste management, this volume contains a selection of papers presented at the 10th International Conference on Waste Management and the Environment.

Proceedings of the 1987 International Waste Management Conference Routledge

Human Resource Management for Events is the first text to cover management of human resources in the event environment. Linking theory, research and application it covers the differing and various types of event in which human resource management is key, such as: * Business Events - a vast sector including events people who manage conferences, exhibitions, incentive trips and individual business travel. * Sporting Events - this sector includes sporting events ranging from the Olympic Games, Rugby World Cup, Soccer World Cup, Tour de France, Grand Prix to many smaller, local sporting events. * Arts and Entertainment - the logistics, risk and financial issues facing entertainment events are leading to the development of more sophisticated operational skills for this sector. Music festivals are increasingly popular. * Public Events - civic ceremonies, parades, celebrations, festivals and protests all fall within the scope of public events. Planning, approval and

risk management are increasingly on the agenda for all levels of government. The particular challenges provided by such events are varied. The size of the workforce explodes at the time of the event to include the event management team, many paid staff, hundreds of volunteers and multiple contractors, such as food vendors and cleaning teams. Everyone working on the site comes into the scope of the event workforce. Little time is available for training and motivation plays a key role in retention and customer service. Decision making occurs on the run and the event is over before anyone can think about performance appraisal. The environment is further characterised by a fast pace, high stress levels and many workers are fatigued by the bump in period before the event audience pours through the gates to add yet another level of pressure. These features of the human resources environment are quite different to those of the traditional workforce. Human Resource Management for Events is vital reading for both students and practitioners involved in this crucially important aspect of event management.

Human Resource Management for Events WIT Press

Waste Management and the Environment VIII contains papers present at the 8th International Conference on Waste Management and the Environment, organised every two years by the Wessex Institute. The contents were contributed by professionals, researchers, government departments and local authorities and cover the current situation of waste management. Waste Management is one of the key problems of modern society due to the ever-expanding volume and complexity of discarded domestic and industrial waste. There is a need to establish better practices and safer solutions for waste disposal. This requires further investigation into disposal methods and recycling, as well as new technologies to monitor waste disposal sites, clean technologies, waste monitoring, public and corporate awareness and general education. Unfortunately many of the policies adopted in the past were aimed at short-term solutions without regard to the long-term implications on health and the environment, leading in many cases to the need to take difficult and expensive remedial action. The development of sustainable strategies is the preferred trend for Waste Management. The approach which has emerged as the most promising has been called 4Rs, where reduction, reuse, recycling and recovery (including the sale of waste as Secondary Raw Materials (SRM) and of Refuse Derived Fuel (RDF)) are seen as the best actions. This largely decreases the volume of waste that needs final disposal. Contents cover such topics as: Environmental impact; Reduce, reuse, recycle and recovery (4Rs); Waste incineration and gasification; Energy from waste; Industrial waste management; Hazardous waste; Agricultural waste; Wastewater; eWaste; Landfill optimisation and mining; Remote sensing; Thermal treatment; Emergent pollutants; Environmental remediation; Direct and indirect pre-treatment of MSW; Disposal of high-level radioactive waste; Legislation; Behavioural issues.

Sustainable Solid Waste Management CRC Press

Containing the proceedings from the 9th International Conference on Waste Management and the Environment, this book is a collection of research on current waste disposal methods, as well as highlighting better practices and safer solutions for the future. Waste Management is one of the key problems of modern society due to the ever-expanding volume and complexity of discarded domestic and industrial waste. Society is increasingly aware of the need to establish better practices and safer solutions for waste disposal. This requires further investigation into disposal methods and recycling as well as new technologies to monitor landfills, industrial mining wastes and chemical and nuclear repositories. This creates a need for more research on current disposal methods such as landfills, incineration, chemical and effluent treatment, as well as recycling, clean technologies, waste monitoring, public and corporate awareness and general education. The papers contained in this title form a collective record of scientific information and work on the current situation of waste management amongst professionals, researchers, government departments and local authorities.

Waste Management and the Environment X Springer Science & Business Media

This volume presents part of the proceedings of two symposia held under the umbrella of Advances in Waste Management, an international meeting organised by the University of Dundee's Concrete Technology Unit.

Dynamics of Fluid and Structural Interactions WIT Press

This book presents the application of system analysis techniques with case studies to help readers learn how the techniques can be applied, how the problems are solved, and which sustainable management strategies can be reached.

Savannah River Site Waste Management Facilities, Aiken County, Allendale County, Barnwell County Thomas Telford

Solid waste management issues, technologies and challenges are dynamic. More so, in developing and transitory nations in Asia. This book, written by Asian experts in solid waste management, explores the current situation in Asian countries including Pacific Islands. There are not many technical books of this kind, especially dedicated to this region of the world. The chapters form a comprehensive, coherent investigation in municipal solid waste (MSW) management, including, definitions used, generation, sustainable waste management system, legal framework and impacts on global warming. Several case studies from Asian nations are included to exemplify the real situation experienced. Discussions on MSW policy in these countries and their impacts on waste management and minimization (if any) are indeed an eye-opener. Undoubtedly, this book would be a pioneer in revealing the latest situation in the Asian region, which includes two of the world's most dynamic nations in the economic growth. It is greatly envisaged to form an excellent source of reference in MSW management in Asia and Pacific Islands. This book will bridge the wide gap in available information between the developed and transitory/developing nations.
