Social Traps and the Problem of Trust Macmillan

The "tragedy of the commons" is a central concept in human
 ecology and the study of the environment. It has had tremendous
 value for stimulating research, but it only describes the reality of
 human-environment interactions in special situations. Research
 over the past thirty years has helped clarify how human
 motivations, rules governing access to resources, the structure of
 social organizations, and the resource systems themselves
 interact to determine whether or not the many dramas of the
 commons end happily. In this book, leaders in the field review the
 evidence from several disciplines and many lines of research and
 present a state-of-the-art assessment. They summarize lessons
 learned and identify the major challenges facing any system of
 governance for resource management. They also highlight the
 major challenges for the next decade: making knowledge

development more systematic; understanding institutions dynamically; considering a broader range of resources (such as global and technological commons); and taking into account the effects of social and historical context. This book will be a valuable and accessible introduction to the field for students and a resource for advanced researchers.

Industrial ecology is a concept that has emerged in response to growing public concern about the impact of industry on the environment. In this framework the natural flow (or circulation) of materials and energy that takes place in biological ecosystems becomes a model for more efficient industrial "metabolism." What industrial ecology is and how it may be applied to corporate environmentalism are the subject of *The Industrial Green Game*. This volume examines industrial circulation of materials, energy efficiency strategies, "green" accounting, life-cycle analysis, and other approaches for preventing pollution and improving performance. Corporate leaders report firsthand on "green" efforts at Ciba-Geigy, Volvo, Kennecott, and Norsk Hydro. And an update is provided on the award-winning industrial symbiosis project in Kalundborg, Denmark. *The Industrial Green Game* looks at issues of special concern to business, such as measuring and shaping public perceptions and marketing "green" products to

The second part focuses on individual level processes and reviews the conceptualization, measurement, and lifespan development of time orientation; the outcomes associated with various time orientations; and how temporal factors influence attitudes and persuasion. Part three explores the role of time within interpersonal and group level processes as applied to such areas as close relationships, group cooperation, aggression, organizational behavior, pro-environmental behavior, and cultural issues.
