A sweeping assessment of the state of higher education today from former Harvard president Derek Bok Higher Education in America is a landmark work--a comprehensive and authoritative analysis of the current condition of our colleges and universities from former Harvard president Derek Bok, one of the nation's most respected education experts. Sweepingly ambitious in scope, this is a deeply informed and balanced assessment of the many strengths as well as the weaknesses of American higher education today. At a time when

colleges and universities have never been more important to the lives and opportunities of students or to the progress and prosperity of the nation, Bok provides a thorough examination of the entire system, public and private, from community colleges and small liberal arts colleges to great universities with their research programs and their medical, law, and business schools. Drawing on the most reliable studies and data, he determines which criticisms of higher education are unfounded or exaggerated, which are issues of genuine concern, and what can be done to improve matters. Some of the subjects considered are long-standing, such as debates over the undergraduate curriculum and concerns over rising college costs. Others are more recent, such as the rise of for-profit institutions and massive open online courses (MOOCs). Additional topics include the quality of undergraduate education, the stagnating levels of college graduation, the problems of university governance, the strengths and weaknesses of graduate and professional education, the environment for research, and the benefits and drawbacks of the pervasive competition among American colleges and universities. Offering a rare survey and evaluation of American higher education as a whole, this book provides a solid basis for a fresh public discussion about what the system is doing right, what it needs to do better, and how the next quarter century could be made a period of progress rather than decline.

Throughout the text, the authors provide case studies, examples, policies, and resources from actual institutions, which further enhance the value of this text. *An Administrator's Guide to Online Education*, encompasses the issues and provides information on how to accomplish one specific task: successful online education administration.

How does the university really pay for itself? Why

do tuition and fees rise so fast? Why do universities lose money on research? Do most donations go to athletics? The volume proposed will examine the past and present landscape of issues and challenges associated with distance education from regional, state, and institutional perspectives. It will look at the current challenges and successes of faculty, student service professionals, presidents, and other administrative leaders as they endeavor to create a quality learning environment through distance education. Corruption and poor governance are acknowledged as major impediments to realizing the right to education and to reaching the Millennium Development Goal of universal primary education by 2015. Corruption not only distorts access to education, but affects the quality of education and the reliability of research findings. From corruption in the procurement of school resources and nepotism in the hiring of teachers, to the buying and selling of academic titles and the skewing of research results, major corruption risks can be identified at every level of the education and research systems. Conversely, education serves as a means to strengthen personal integrity and is a critical tool to address corruption effectively. The Global Corruption Report (GCR) is Transparency International's flagship publication, bringing the expertise of the anti-corruption movement to bear on a specific corruption issue or sector. The Global Corruption Report on education consists of more than 70 articles commissioned from experts in the fields of corruption and education, from universities, think-tanks, business, civil society and international organisations. The Global Corruption Report on education and academic research will provide essential analysis for understanding the corruption risks in the sector and highlight the significant work that has already been done in the field to improve governance and educational

outcomes. This will be an opportunity to pull together cutting edge knowledge on lessons learnt, innovative tools and solutions that exist in order to fight corruption in the education sector.

Public Policy Challenges Facing Higher Education in the American West is the first regional public policy study of American higher education. Presidents of the Western State Commission for Higher Education and the National Center for Higher Education Management Systems, alongside nationally recognized policy analysts and current western campus presidents, provosts, and administrators, tackle seven key public policy issues facing postsecondary education in the American West: student access, federal research funding, state governance, state financing, state appropriations and their relationship to institutional tuition, distance education and technology, and the role of community colleges. These analysts, researchers, and administrators offer a clear and complete analysis of the facts of each

policy situation, the public policy options, and their connections to state and university relationships. Fifteen western states, including Alaska, California, and Hawaii, comprise the expansive region under discussion. With its companion volume, Higher Education

in the American West: Regional History and State Contexts, this book is essential reading for higher education policymakers, scholars, and anyone who wants to know what the relationship between states and universities in the West has been and where it is going.
