A Linux smart home is about controlling and monitoring devices and information around your home using a standard personal computer, Linux, and its vast array of open source tools. You don't have to be a master programmer to create one. If you like to tinker with Linux, *Linux Smart Homes For Dummies* will guide you through cool home automation projects that are as much fun to work on as they are to use. Home automation used to be limited to turning on lights and appliances, and maybe controlling your thermostat and lawn sprinkler, from your computer. While you still might not be able to create all the Jetsons' toys, today you can also Build a wireless network Create and set up a weather station Automate your TV and sound system Spy on your pets when you're not home Set up an answering system that knows what to do with calls Increase your home's security If you know how to use Linux and a few basic development tools — Perl, the BASH shell, development libraries, and the GNU C compiler—*Linux Smart Homes For Dummies* will help you do all these tricks and more. For example, you can Discover the best sources for Linux-based home automation devices Set up a wireless network, create a wireless access point, build a bridge between wired and wireless networks, and route your own network traffic Build a personal video recorder with MythTV that will record to DVD, or set up a wireless streaming music system Create a smart phone system that takes messages and forwards them to your fax, modem, or answering machine Build a weather station that notifies you of severe weather alerts Control and secure your home automation network, and even check on your house when you're away The bonus CD-ROM includes all kinds of cool open source software for your home automation projects. *Linux Smart Homes For Dummies* even includes lists of cool gadgets to check out and great ways to automate those boring household chores. A smart home's a happy home!

Knots and Surfaces John Wiley & Sons

An argument for retaining the notion of personal property in the products we “buy” in the digital marketplace. If you buy a book at the bookstore, you own it. You can take it home, scribble in the margins, put in on the shelf, lend it to a friend, sell it at a garage sale. But is the same thing true for the ebooks or other digital goods you buy? Retailers and copyright holders argue that you don't own those purchases, you merely license them. That means your ebook vendor can delete the book from your device without warning or explanation—as Amazon deleted Orwell's 1984 from the Kindles of surprised readers several years ago. These readers thought they owned their copies of 1984. Until, it turned out, they didn't. In *The End of Ownership*, Aaron Perzanowski and Jason Schultz explore how

notions of ownership have shifted in the digital marketplace, and make an argument for the benefits of personal property. Of course, ebooks, cloud storage, streaming, and other digital goods offer users convenience and flexibility. But, Perzanowski and Schultz warn, consumers should be aware of the tradeoffs involving user constraints, permanence, and privacy. The rights of private property are clear, but few people manage to read their end user agreements. Perzanowski and Schultz argue that introducing aspects of private property and ownership into the digital marketplace would offer both legal and economic benefits. But, most important, it would affirm our sense of self-direction and autonomy. If we own our purchases, we are free to make whatever lawful use of them we please. Technology need not constrain our freedom; it can also empower us.

In most mathematics textbooks, the most exciting part of mathematics - the process of invention and discovery - is completely hidden from the student. The aim of *Knots and Surfaces* is to change all that. *Knots and Surfaces* guides the reader through Euler's formula, one and two-sided surfaces, and knot theory using games and examples. By means of a series of carefully selected tasks, this book leads the reader on to discover some real mathematics. There are no formulas to memorize; no procedures to follow. This book is a guide to the mathematics - it starts you in the right direction and brings you back if you stray too far. Discovery is left to you. This book is aimed at undergraduates and those with little background knowledge of mathematics.

Materials on Left Dislocation consists of two parts. Part I contains a selection of the main texts on which our present understanding of the Left Dislocation construction is based. For various reasons most of these texts had never been published, or are published in obsolete places. These articles, by Van Riemsdijk & Zwarts, Rodman, Hirschbuehler, Vat, Cinque and Zaenen, contain the first arguments that pertain to the major questions about Left Dislocation (for example whether movement or base-generation is involved), and they present the rationale for the now standard distinctions between Hanging Topic LD, Contrastive LD, and Clitic LD. In Part II a number of recent contributions to the grammar of Left Dislocation are brought together. In these articles, by Anagnostopoulou, Demirdache, Escobar, Van Hoof and Wiltschko, new aspects are being explored such as the relationship between LD and the grammar of focus and the role of clitic doubling and its semantic effects in Clitic LD. Furthermore, the empirical basis is broadened to encompass more languages. Finally, these articles explore the relationship between LD and a number of apparently unrelated constructions such as split topicalization. The book constitutes an indispensable tool for any linguist who seriously works on dislocation phenomena.

The C++ Standard Library provides a set of common classes and interfaces that greatly extend the core C++ language. Josuttis' book not only provides comprehensive documentation of each library component, it also offers clearly written explanations of complex concepts, describes the practical programming details needed for effective use, and gives example after example of working code. This thoroughly up-to-date book reflects the newest elements of the C++ standard library incorporated into the full ANSI/ISO C++ language standard. In particular, the text focuses on the Standard Template Library (STL), examining containers, iterators, function objects, and STL algorithms.

Keep Delete is about turning digital messages on the verge of being forgotten, deleted, outdated or even lost into something tangible; into artifacts. Perhaps the last message from a friend who passed away, the first message from a grandparent still trying to figure out how to use predictive text, a cryptic love note or simply a well-timed message that was so appreciated at the time; these are the

messages of Keep Delete. Including more than a hundred designed artifacts from designers, students and artists from around the world and essays from designers reflecting on the relationship between design and digital communication, Keep Delete is both an archive and a nudge of encouragement for readers to keep the messages that are wanting to be kept. For more information visit: www.keepdelete.com Featuring the following contributors: Tomislava Sekulic, Jane Bernstein, Susan Agre-Kippenhan, Paul Wright, Selina Schepers, Natalie Erceg, Kathleen Kennedy, Darrell Hanley, Kurt Novack, Latiyfa Whitehead, Kelsey Norz, Rebecca Tegtmeyer, Nita Udhvani, Kristin Liu, Gina Meyers, Bob Janssens, Samantha Jane Holmes, Marc Stevens, Alena Harrold, Peter Gilderdal, Chris Holt, Nazli Eda Noyan, Crystal Sim, Rebecca Marshall, Holly Leonardson, Ryan Kotar, Sarah Hefetz, Frank Curkovic, Carrie Lee Schwartz, Vince Maida, Michiel Kragten, Mervi Pakaste, Jamie Porciello, Stephanie Cunningham, Terri McManus, Mel Rye, Helena Barbosa, May Tsai, Mike Kippenhan, Jenny Brady, David Lewis, Jennifer M McKnight, John Meng, Christina Sharp, Am I Collective, Karen Grenfell, Nadá Khalil, JT Yean, Joanna Wiseman, Ludivine Lechat, Thomas Bannon, Fiona McLaughlin, David Gardener, Miet Claes, Jennifer M McKnight, Hyla Willis, Ilse Stouten, Ida Kumoji -Ankrah, Charline Jansen, Darrell Hanley, Tyler Donovan, Foreign Policy Design Group, Gary Gowans, Thomas Billen, Gabrielle Reith, Amy Potter, Brittany Shaw, C.J.
