Improving Functional Outcomes in Physical Rehabilitation Human Kinetics Futureproof your body and relieve chronic pain resulting from sitting, slouching, and other bad lifestyle habits with this easy-to-perform set of daily stretching and movement routines—from an innovative physical therapist and social media star who coaches dozens of celebrity clients.

What if we could easily acquire long-lasting protection for our bodies and escape the chronic pain caused by our sit-all-the-time, slouch-too-much lifestyles? Vinh Pham is a world-class physical therapist who has worked with a broad range of clients—from Olympians to NBA stars to MMA fighters to Golden Globe and Grammy Award-winning artists. Early in his career, he discovered a disappointing truth: most of his patients came to him already in pain. They had lifestyle habits that misaligned their joints and tightened their muscles. And the recent epidemic of prolonged sitting—which represents an all-day assault on the body—has only made things worse. If you're sitting for more than thirty minutes at a time without getting up, you may be heading toward a world of hurt. Vinh's answer to the host of muscle maladies that ails us has been a revolutionary concept: why not

futureproof? Instead of reacting to chronic pain after it flares up, what if we focused on a “movement discipline” that not only prevents injuries but leads to longer lives, healthier bodies, and a clearer mind? A precise and simple toolkit for tweaking the way we move (or refuse to move), *Sit Up Straight* outlines a process that starts with a daily posture regimen. Performed correctly, Vinh’s twelve simple movements, which can be done in twenty minutes, will lock in protection for the rest of the day. But Vinh goes further. He provides stretching and exercise routines for many of the specific ailments that affect us—from hamstring pulls to sciatica to rotator cuff problems—and, best of all, he offers a series of customized movements based on age, gender, and the kind of work we perform. “No fancy equipment required...full of good and clear tips and wisdom” (Booklist), *Sit Up Straight* shows that the solution to becoming pain-free is easier than we think.

Developing the Core

Seated Strength & Flexibility Penguin
Tom Danielson's Core Advantage offers a simple, highly effective core strength program for cyclists. This comprehensive approach shows the 50 essential core workout exercises that will build strength and endurance in the key core muscles for cycling—no gym membership required. Professional cyclist Tom Danielson used to have a bad back. He shifted in the saddle, never comfortable, often riding in pain. Hearing that core strength could help his back, he started doing crunches, which made matters worse. He turned to personal trainer Allison Westfahl for a new

approach. Danielson and Westfahl developed all-new core exercises to build core strength specifically for cycling, curing Danielson's back problems. Better yet, Danielson found that stronger core muscles boosted his pedaling efficiency and climbing power. Using Danielson's core exercises, cyclists of all abilities will enjoy faster, pain-free riding. Cyclists will perform simple exercises using their own body weight to build strength in the low back, hips, abs, chest, and shoulders without adding unwanted bulk and without weights, machines, or a gym membership. Each Core Advantage exercise complements the motions of riding a bike so cyclists strengthen the right muscles that stabilize and support the body, improving efficiency and reducing the fatigue that can lead to overuse injuries and pain in the back, neck, and shoulders. Beginner, intermediate, and advanced training plans will help bike racers, century riders, and weekend warriors to build core strength throughout the season. Each plan features warm-up stretches and 15 core exercises grouped into workouts for injury resistance, better posture, improved stability and bike handling, endurance, and power. Westfahl explains the goal for each exercise, which Danielson models in clear photographs. Riding a bike takes more than leg strength. Now Tom Danielson's Core Advantage lays out the core strengthening routines that enable longer, faster rides.

Total Knee Arthroplasty Human Kinetics
Radical in its simplicity, Dr. Eric Goodman's visionary approach to mindful movement corrects the complacent adaptations that lead to back and joint pain, and teaches us to harness the body's natural movement patterns into daily activities to make us fit, healthy, and pain free. Our sedentary lifestyle has led to an epidemic of chronic pain. By adapting to posture and movement that have us out of balance—including sitting all day at a keyboard, tilting our heads forward to look at our phones—we consistently compromise our joints, give our organs less room to function, and weaken our muscles. How we hold and live in our bodies is fundamental to our overall health, and the good news is that we all hold the key to a healthier body. Dr. Goodman has spent years studying human physiology and movement. He has trained world-class athletes for better performance, and has healed people of all ages and occupations of lifelong debilitating pain. His theory of self-healing is now available to everyone. His practical program trains the posterior muscle chain—shoulders, back, butt, and

legs—shifting the burden of support away from joints and putting it back where it belongs: into large muscle groups. Filled with helpful diagrams and sixty color photographs, True to Form shows readers how to successfully integrate these powerful movements into everyday life—from playing with the kids to washing dishes to long hours in the office—transforming ordinary physical actions into active and mindful movements that help to eliminate pain, up your game, or simply feel more energetic. True to Form shows you how to move better, breathe better, and get back to using your body the way nature intended.
