Sex, Diet and Tanning: The Curious Story of the Drug to Induce a Natural Tan Including All You Ever Wanted to Know About Tanning By: Terence Winters, PhD and Robert Dorr, PhD Sex, Diet and Tanning tells the true story of the development of the tanning drug known sequentially as Melanotan, Epitan and then Scenesse (afamelanotide), from its discovery in the laboratories of University of Arizona (UA) to the start of the clinical trials. It also includes everything you need to know about the biology of tanning written in a way that can be easily understood. It is now approved by the FDA and EMA and is marketed in the USA and the EU to treat an orphan disease by causing the patient to develop a natural tan without exposure to sunlight. The story covers the incredible properties of this class of drugs which include sexual arousal, weight loss and tanning in humans, which led to the nickname of the "Barbie Drug". It describes the risks and uncertainties of the company start-up process and how decisions have to be made based on limited information and implemented with scarce amounts of capital. The story takes several surprising turns including the accidental discovery of the sexual arousal properties and relocation from Tucson, Arizona to Melbourne, Australia due to the availability of funding. It also includes a tragic murder and some really interesting personalities. It is a guide to structuring a start-up company and making it successful.

For health-conscious pet owners, a natural, holistic guide to getting every canine back to his best, most primal state From the tiniest teacup poodle to the most massive Great Dane, dogs' digestive systems are pure wolf. Fido's ancestors enjoyed a diet that was 45-50 percent protein, 40-50 percent fat, and less than 10 percent carbohydrates. Walk down the pet food aisle, however, and you'll find that typical commercial kibble is made mainly of starchy ingredients like peas, potatoes, corn, wheat, rice, and oats—nothing a prehistoric pup would dream of eating. This "healthy" mix is proving anything but: About 85 percent of dogs eat commercial dog food, and at least half of them are overweight or obese, with cancer killing 42 percent of all dogs and half of dogs over the age of 10. So how do you feed a wolf disguised as a pug? Paleo Dog guides readers through an assessment of their dogs' diet and helps

them find the right balance of healthy ingredients. In addition to recipes and nutrition info, the book offers advice on what treats are safe, training tips, minimizing veterinary care, the benefits of exercise and massage, and how to ensure dogs are receiving the love and attention they need. Paleo Dog is the ultimate manual for any pet owner who wants to give her pet the longest and best quality of life.

Choosing the right dog food in a world with too many choices

Walking down the dog food aisle in a pet supply superstore can present you with an overwhelming number of choices. Reading about dog food on the internet can make your head spin with so many opinions and stories. And judging the content that you find on dog food packaging can be confusing and misleading. How can the

average dog owner make an informed choice in accordance with her dog's age, size and condition? In her latest book, author Linda Case describes how to make logical, evidence-based decisions for what to feed your dog amid all the options available.

You will learn

- How pet food marketers appeal to your emotions to persuade you to buy a particular type of dog food.
- To distinguish between scientific, evidence-based information and the anecdotal evidence which is so pervasive—and often misleading—in the dog food arena.
- Is there a scientific basis for dog foods designed specifically for puppies, senior dogs, canine athletes—even various breeds of dogs?
- How to read and evaluate all of the material included on a typical package of dog food from the ingredients and label claims (“Natural,” “Anti-Oxidant,” “Low Fat”), to the Nutrient Analysis and Nutritional Adequacy statements.
- How to avoid choice paralysis and the cognitive traps that can interfere with clear decision making.

What experts are saying about *Dog Food Logic*

Pet food is like a religion for many—but now those strong emotional ties can be backed up with fact. Linda Case separates fact from fiction, explains the complex terms and offers a guide to pet nutrition in simple to comprehend language. Unlike other books on this topic, there is no agenda here—except to present facts and then allow pet owners to make their own logical conclusions, letting the kibble drop where it may.

Nutrition, An Issue of Veterinary Clinics of North America: Exotic Animal Practice, Dogwise Publishing

What do dogs mean in America? How do Americans make meaning through their dogs? The United States has long expressed its cultural unconscious through canine iconography. Through our dogs, we figure out what we're thinking and who we are, representing by proxy the things that we don't quite want to recognize in ourselves. Often, it's a specific breed or type of dog that serves as an informal cultural mascot, embodying an era's needs, fears, desires, longings, aspirations, repressions, and hopeless contradictions. Combining cultural studies with personal narrative, this book creates a playful, speculative reading of American culture through its canine self-representations. Looking at seven different breeds or types over the last seven decades, readers will go on an intellectual dog walk through some of the mazes of American cultural mythology.

#1 New York Times Bestseller In this pathbreaking guide, two of the world's most popular and trusted pet care advocates reveal new science to teach us how to delay aging and provide a long, happy, healthy life for our canine companions. Like their human counterparts, dogs have been getting sicker and dying prematurely over the past few decades. Why? Scientists are beginning to understand that the chronic diseases afflicting humans—cancer, obesity, diabetes, organ degeneration, and autoimmune disorders—also beset canines. As a result, our beloved companions are vexed with preventable health problems throughout much of their lives and suffer shorter life spans. Because our pets can't make health and lifestyle

decisions for themselves, it's up to pet parents to make smart, science-backed choices for lasting vitality and health. The Forever Dog gives us the practical, proven tools to protect our loyal four-legged companions. Rodney Habib and Karen Becker, DVM, globetrotted (pre-pandemic) to galvanize the best wisdom from top geneticists, microbiologists, and longevity researchers; they also interviewed people whose dogs have lived into their 20s and even 30s. The result is this unprecedented and comprehensive guide, filled with surprising information, invaluable advice, and inspiring stories about dogs and the people who love them. The Forever Dog prescriptive plan focuses on diet and nutrition, movement, environmental exposures, and stress reduction, and can be tailored to the genetic predisposition of particular breeds or mixes. The authors discuss various types of food—including what the commercial manufacturers don't want us to know—and offer recipes, easy solutions, and tips for making sure our dogs obtain the nutrients they need. Habib and Dr. Becker also explore how external factors we often don't think about can greatly affect a dog's overall health and wellbeing, from everyday insults to the body and its physiology, to the role our own lifestyles and our vets' choices play. Indeed, the health equation works both ways and can travel "up the leash." Medical breakthroughs have expanded our choices for canine health—if you know what they are. This definitive dog-care guide empowers us with the knowledge we need to make wise choices, and to keep our dogs healthy and happy for years to come.

Updating recommendations last made by the National Research Council in the mid-1980s, this report provides nutrient recommendations based on physical activity and stage in life, major factors that influence nutrient needs. It looks at how nutrients are metabolized in the bodies of dogs and cats, indications of nutrient deficiency, and diseases related to poor nutrition. The report provides a valuable resource for industry professionals formulating diets, scientists setting research agendas, government officials developing regulations for pet food labeling, and as a university textbook for dog and cat nutrition. It can also guide pet owners feeding decisions for their pets with information on specific nutrient needs, characteristics of different types of pet foods, and factors to consider when feeding cats and dogs.
