The Other End of the Leash Dogwise Publishing

Post-traumatic stress disorder is a psychiatric illness that can occur in anyone who has experienced a life-threatening or violent event. The trauma can be due to war, terrorism, torture, natural disasters, violence, or rape. In PTSD the brain areas that are likely to be affected are the hippocampus (memory), amygdala (fear association), the prefrontal cortex (cognitive processing), and the ascending reticular activating system (arousal). The chemical of interest is norepinephrine, which is released during a stressful event and is part of the fight-or-flight response meant to mobilize the body to action. The objective of this title is to outline the neurobiology of post-traumatic stress disorder and provide treatment strategies for clinicians. The chapter material from this book has evolved from a seminar on PTSD held recently under the auspices of the VA Boston Healthcare System, Boston University Medical Center and Harvard Medical School. We propose a book that will focus on the epidemiology, neurobiology, MRI studies, animal models, arousal and sleep issues, clinical trials, and treatment strategies for clinicians. Treatment will cover such topics as guidelines for treating posttraumatic stress disorder, PTSD and the use of mental health services, cognitive intervention therapy, and large scale clinical trials in PTSD. This collection will be a vital source of information to clinicians and neuroscientists.

Feline Behavioral Health and Welfare John Wiley & Sons

Everything you need to know about adopting, owning, and loving a pit bull All dogs are special, but living with a pit bull really is different. You know how loyal and lovable your dog is, but your life can be affected by the breed's undeserved reputation. The Pit Bull Life celebrates the everyday joys of owning a pit bull—from their boundless energy to their love of life—while providing helpful facts and strategies you need to counter unfair laws and policies you may face. You'll learn the history of how the pit bull got to where it is today and what you can do to help secure its future. You'll also find practical advice about breed characteristics, how to find a good match, and how to communicate with your dog, along with inspiring stories of people who've devoted their lives to this very special dog.

Shelter Medicine for Veterinarians and Staff John Wiley & Sons

Animal Behavior for Shelter Veterinarians and Staff presents and evaluates the available research and programs that address both animal and human behaviors associated with the intake, management and rehoming of dog and cats. Introductions to dog and cat behavior relevant to any animal professional Reviews behavioral reasons for the relinquishment of dogs and cats Describes intake and assessment protocol, shelter design, training and enrichment programs that reduce stress and enhance behavioral well-being Concepts to improve the adoption process and support the human-animal bond post-adoption

Animal Behavior for Shelter Veterinarians and Staff MDPI

How unwanted dogs are rescued and then trained as service dogs to help people with disabilities. WINNER--2016 Midwest Book Award. All proceeds will go to the 501(c)(3) charity, Pawsitivity Service Dogs. "Simply astonishing in its volume, information, approach-ability, readability, transparency,

experienced voice, helpfulness/usefulness and honesty. It's inspirational, as well as competent, realistic, transparent, practical!'. Its tone is forthright but kind."--Dr. Beth Rausch, DVM, University of Wisconsin, River Falls "Our service dog is better than any medication. She has not just helped my daughter but the whole family. Millie is the best, most loving and loyal companion for my daughter. Tom and Julie of Pawsitivity are the kind of people that really care and just keep giving. I can not say thank you enough."--James Artisensi, father of a child with a Pawsitivity service dog

Issues in Animal Science and Research / 2011 Edition is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Animal Science and Research. The editors have built Issues in Animal Science and Research: 2011 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Animal Science and Research in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Animal Science and Research: 2011 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

Behavior Problems of the Dog and Cat *Howell Book House

This stimulating and comprehensive collection brings together multiple perspectives on the topic of personality in nonhuman animals—linking historical perspectives, theoretical approaches, methods, and cutting-edge discoveries. Experts from various fields describe their findings on species ranging from dogs, cats, chimpanzees, and dolphins to sharks, snakes, and other reptiles. Chapters not only discuss the evolution of personality, but also describe potential applications within the areas of animal-human interactions, animal ethics and welfare, conservation science, and other areas. A key focus is the role of genetics and the environment in determining animal behavior and personality, including related traits, such as creativity and boredom. These chapters present the study of personality in nonhumans as a means by which we can better understand medical and psychological issues specific to our own species as well. Chapters include: · Exploring factor space (and other adventures) with the Hominoid Personality Questionnaire · The quantitative and molecular genetics of individual differences in animal personality · Personality, temperament and individuality in reptile behavior · What do we want to know about personality in marine mammals? · Individual differences in nonhuman animals: examining boredom, curiosity, and creativity · The interplay between animal personality and foraging ecology Taking significant steps in advancing the study of animal personality, Personality in Nonhuman Animals will engage personality psychologists, comparative psychologists, and behavior ecologists as well as conservationists, zookeepers, livestock managers, and all those interested in the brain and behavior of animals.

Desperate Dogs Determined Measures Academic Press

Learn how to assess any dog in order to anticipate his behavior and training needs; use the "Honeymoon Period" to teach new behaviors and establish good habits; discover the best way to deal with common problem behaviors such as fear and resource guarding; and learn to use a combination of positive training and commonsense management to bring out the best in your dog.

McGraw-Hill's 10 ACT Practice Tests, Second Edition Springer

Infectious Disease Management in Animal Shelters is a comprehensive guide to preventing, managing, and treating disease outbreaks in shelters.

Emphasizing strategies for the prevention of illness and mitigation of disease, this book provides detailed, practical information regarding fundamental principles of disease control and specific management of important diseases affecting dogs and cats in group living environments.

Taking an in-depth, population health approach, the text presents information to aid in the fight against the most significant and costly health issues in shelter care facilities.

Successful Dog Adoption Academic Press

AAP Prose Award Finalist 2018/19 Management of Animal Care and Use Programs in Research, Education, and Testing, Second Edition is the extensively expanded revision of the popular Management of Laboratory Animal Care and Use Programs book published earlier this century. Following in the footsteps of the first edition, this revision serves as a first line management resource, providing for strong advocacy for advancing quality animal welfare and science worldwide, and continues as a valuable seminal reference for those engaged in all types of programs involving animal care and use. The new edition has more than doubled the number of chapters in the original volume to present a more comprehensive overview of the current breadth and depth of the field with applicability to an international audience. Readers are provided with the latest information and resource and reference material from authors who are noted experts in their field. The book: - Emphasizes the importance of developing a collaborative culture of care within an animal care and use program and provides information about how behavioral management through animal training can play an integral role in a veterinary health program - Provides a new section on Environment and Housing, containing chapters that focus on management considerations of housing and enrichment delineated by species - Expands coverage of regulatory oversight and compliance, assessment, and assurance issues and processes, including a greater discussion of globalization and harmonizing cultural and regulatory issues - Includes more in-depth treatment throughout the book of critical topics in program management, physical plant, animal health, and husbandry. Biomedical research using animals requires administrators and managers who are knowledgeable and highly skilled. They must adapt to the complexity of rapidly-changing technologies, balance research goals with a thorough understanding of regulatory requirements and guidelines, and know how to work with a multi-generational, multi-cultural workforce. This book is the ideal resource for these professionals. It also serves as an indispensable resource text for certification exams and credentialing boards for a multitude of professional societies Co-publishers on the second edition are: ACLAM (American College of Laboratory Animal Medicine); ECLAM (European College of Laboratory Animal Medicine); IACLAM (International Colleges of Laboratory Animal Medicine); JCLAM (Japanese College of Laboratory Animal Medicine); KCLAM (Korean College of Laboratory Animal Medicine); CALAS (Canadian Association of Laboratory Animal Medicine); LAMA (Laboratory Animal Management Association); and IAT (Institute of Animal Technology).

Animal Behavior for Shelter Veterinarians and Staff John Wiley & Sons

Is it possible that what looks like play is something else entirely? German author Mechtild Käufer presents findings from scores of researchers

worldwide who study why dogs play, the benefits they get from play and how to recognize the "rules" of play that dogs follow to keep their play behaviors fun and safe. There are dozens of color photographs included to help illustrate the actions of dogs at play.

Post-Traumatic Stress Disorder McGraw Hill Professional

Laboratory Animal Welfare provides a comprehensive, up-to-date look into the new science of animal welfare within laboratory research. Animals specifically considered include rodents, cats and dogs, nonhuman primates, agricultural animals, avian animals and aquatic animals. The book examines the impact of experiment design and environment on animal welfare, as well as emergency situations and euthanasia practices. Readers will benefit from a review of regulations and policy guidelines concerning lab animal use, as well as information on assessing animal welfare. With discussions of the history and ethics of animals in research, and a debate on contemporary and international issues, this book is a go-to resource for laboratory animal welfare.

Decoding Your Cat Behavior of Shelter Animals

Head held high, I walked out of the shelter with the dog others had deemed hopeless. Minutes later, I was banished from my own car by bared teeth and bristled fur, caught in the rain and dripping wet, foiled by the very creature whose cause I had just championed. Never in my life had I asked so many times, "What was I thinking?" When I rescued Buji, little did I know he would teach me some of life's most valuable lessons—and all he had to do to get my attention was save my life. In Buji and Me, psychological therapist and animal behaviorist Wendy Kelly shares the principles of a dynamic, life-changing force that occurs when we allow our pets to become our teachers. If we are open and aware, they will guide us to being, well, better beings—present, honest, aware, focused, joyful, kind, and loving. Unleash the seven secrets of living the "pawsitive" life . . . starting today.

Reimagining Animal Sheltering: Support Services and Community-Driven Sheltering Methods John Wiley & Sons

Behavior Problems of the Dog & Cat, 4th Edition retains the highly practical approach that has proved so successful in previous editions, offering diagnostic guidelines, preventive advice, treatment guidelines and charts, case examples, client forms and handouts, and product and resource suggestions, along with details on the use of drugs and natural supplements to help optimize the behavior services offered in practice. Step-by-step guidelines describe how to collect a patient history, perform a thorough physical examination, conduct diagnostic testing, formulate differential diagnoses, select treatment, and monitor the patients' responses. Background information describes how dog and cat behavior problems arise and how they can be prevented. Coverage of behavior modification techniques provides you with a clear understanding of suggested treatment as well as the use of drugs, products, pheromones, surgery, diet, and alternative therapies. Content on behavioral genetics explores this rapidly growing and advancing field and includes new therapeutic approaches for cognitive decline. Case studies illustrate real-life clinical situations. Easy-access treatment tables provide at-a-glance solutions to common behavior problems. Useful appendices include treatment protocols as well as the drug information and dosages that make effective prescribing easy. NEW! Many hot new topics are covered, including fear, anxiety, and stress and their effects on health and behavior, as well as pain and behavior, the psychobiological approach to veterinary behavior assessment, and pets and the family dynamic. NEW! Updated chapter content is extensively augmented or completely rewritten by new authors, making this more than just a new edition - it's a new book! NEW! eBook version is included with print purchase which allows access to all of the text, figures, and references, with the ability to search, customize content, make notes and highlights, and have content read aloud. Online access also includes handouts and forms, drug dosing, and a comprehensive directory of resources.

We want to give you the practice you need on the ACT McGraw-Hill's 10 ACT Practice Tests helps you gauge what the test measures, how it's structured, and how to budget your time in each section. Written by the founder and faculty of Advantage Education, one of America's most respected providers of school-based test-prep classes, this book provides you with the intensive ACT practice that will help your scores improve from each test to the next. You'll be able to sharpen your skills, boost your confidence, reduce your stress-and to do your very best on test day. 10 complete sample ACT exams, with full explanations for every answer 10 sample writing prompts for the optional ACT essay portion Scoring Worksheets to help you calculate your total score for every test Expert guidance in prepping students for the ACT More practice and extra help online ACT is a registered trademark of ACT, Inc., which was not involved in the production of, and does not endorse, this product.

Assessing Aggression Thresholds in Dogs Pawsitivity Press

Expert guidance in choosing the right dog -the first time Written by a renowned expert in shelter adoption, Successful Dog Adoption delivers all the information you need to find the perfect dog at a shelter and make him part of your family. In easy-to-understand language, Sue Sternberg helps you decide if you're ready to adopt by evaluating your reasons and translating them into what you should look for in a particular dog. She shows you how to find a reputable shelter, prepare for the adoption process, and work with shelter personnel to make sure they have appropriately screened their dogs. You'll also learn about "rescue" dogs and why one might be right for you. This practical guide covers all the vital issues you need to consider when adopting-choosing a male or female, a puppy or an adult; identifying fearful dogs or dogs who will bite; and seeking out a dog with the ideal temperament. Featured here are detailed tests and observations used by professionals to ascertain the temperament and compatibility of shelter dogs-now made available to the public for the first time. You'll discover how to determine risk factors in an unknown dog, gauge a dog's potential reaction to guests and strangers, and predict the compatibility level when you add another dog to your household. This book also offers invaluable

advice on training your new pet, including guidance in housebreaking, selecting a training class, and helping a dog who gets carsick or doesn't like to be home alone. And, if you still experience difficulties with your dog, Sternberg gently discusses the steps you can take. Authoritative and friendly, *Successful Dog Adoption* is the one-stop guide for finding your own "superdog"-and keeping the dog-owner relationship fresh and rewarding for years to come.

Strategies for Successful Animal Shelters ScholarlyEditions

The qualifications to become a therapy animal do not specify the breed or background of the dog participant, so any dog can become a therapy dog if they possess the right attributes. The question of what exactly those right attributes are is what drives research in this field. Furthermore, finding out which tools are the most valid and reliable in finding out these characteristics is just as important. If a valid and reliable tool can be used to find appropriate dogs for use in therapy from a shelter setting, many dogs can fill an important role in society while awaiting adoption and experience a novel form of enrichment. For this research, a literature review was conducted in order to determine how dogs are chosen for AAT and if these methods are appropriate in terms of validity and reliability. Next, the interest in involving shelter dogs in AAT was identified utilizing a survey. Finally, a test battery was developed in order to select shelter dogs appropriate for a simulated AAT session. In order to assess preferences in terms of the type of dog used in AAT, whether that be a trained therapy animal or a shelter dog, a survey was administered to assess the respondent's trauma background, interest in AAT, and any stigmas associated with shelter dogs. It was hypothesized that individuals with a trauma history would be more likely to express interest in working with shelter dogs in AAT, due to increased empathy and prosocial behavior (Hoffman, 2008). Results from the survey indicated respondents were more likely to agree with certain questions as the number of traumas they had experienced increased. Respondents believed that AAT would benefit shelter dogs due to interaction with a person, and as traumas increased (on a continuous scale), respondents were 1.436 (CI: 1.037 - 1.988) times more likely to choose that they strongly agree with this statement. As traumas increased, respondents were 1.512 (CI: 1.016 - 2.249) times more likely to report that they strongly agree that having time out of the kennel during an AAT session would be beneficial for shelter dogs. Finally, respondents were 1.403 (CI 1.094 - 1.799) times more likely to indicate that AAT with a shelter dog would be beneficial because of possible shared trauma as traumas increased. Most notably, these questions related to the dog's experience during AAT (i.e. respondents agreed most strongly with prompts that indicated the dog would gain enjoyment from the activity). Therefore, it is speculated based on these results that our population of respondents were more inclined to participate in AAT because of the potential benefits to the dog participants, and this may be influenced by their trauma history. The cylinder detour task (Bray & Gruen, 2020), pointing test (Hare & Tomasello; 1999), impossible test (Cavalli et al. 2020), empathy assessment (Meyers-Manor & Botten, 2020), and novel object test (Bray & Gruen, 2020) were all used in order to identify dogs in terms of their impulsivity, social cognition, help seeking behavior, empathy, and resilience, respectively. It was hypothesized that dogs that displayed low levels of impulsivity, high levels of social cognition, frequent help seeking behaviors, high levels of empathy, and high levels of resilience would be best suited for a simulated group animal-assisted therapy scenario. To evaluate this hypothesis, dogs were screened via the aforementioned behavioral assessments 24 hours prior to a simulated AAT experience. Only about half of all dog participants (24/49) performed above chance in the pointing test, that is, they correctly chose the bowl containing the treat based on following the human point indicating where the treat was located. Despite this, the analysis was still significant, with a p-value of 0.0314. Only around one-third of dog participants (17/49) displayed the help seeking behavior during the impossible task; however, analysis for this variable also proved significant, with a p-value being 0.0322. The analysis for all other variables were non-significant. Human participants were asked to evaluate their overall level of enjoyment during simulated AAT, as well as their mood (MFS) and stress level (SFS) before and after sessions. The dogs' experiences were evaluated

using the Human Animal Interaction Scale (HAIS), a validated scale, reported by the human participants. All human participants found simulated AAT enjoyable, and based on HAIS scores, the majority of dog participants had positive experiences. All human participants reported positive experiences with nearly 85% of participants reporting simulated AAT to be a very positive experience and 15% reporting it to be somewhat positive. Approximately half of all participants also experienced an improvement to their MFS and SFS scores (54.84% and 41.94%, respectively). A third of participants had no net change to MFS (32.26%) and SFS (29.03%). A few individuals reported an increase in stress and mood levels post-AAT session (9.68% and 3.23%, respectively). Out of the 47 dog participants with complete HAIS profiles, almost 90% of dogs had a net positive experience (HAIS greater than 0). The main takeaways from this research are that the population surveyed was eager to engage in AAT, regardless of the background of the dog participants. Also, human participants seem particularly motivated to participate in AAT due to the potential benefits to the dog participants, not only to themselves. During the simulated AAT session in the second research study, all human participants reported a positive experience. Dog participants also showed an overwhelming majority in terms of a net positive experience. Therefore, the One Welfare goal of the research was successful.

The Dog Trainer's Resource 2 John Wiley & Sons

A comprehensive resource to understand the behavioral considerations for intake, management, and rehoming of dogs and cats *Animal Behavior for Shelter Veterinarians and Staff* provides readers with comprehensive information addressing the behavior of both animals and humans associated with the intake, management, and rehoming of dogs and cats. To aid in practical application, the book covers specific behavior considerations in both dogs and cats. Topics are separated by animal to allow for easy accessibility by professionals who are actively working in the field. Sample topics covered within the book include: The behavior issues that are a common cause of pet relinquishment Behavioral assessment, behavior modification, the integration of behavioral well-being into sheltering Welfare assessment, psychopharmacology, safety net programs, and caring for animals during long-term legal holds Equine care and caring for small mammals *Animal Behavior for Shelter Veterinarians and Staff* is a must-have reference for evidence-based practical tips, techniques, and protocols for everyday use in animal shelters by shelter volunteers and staff, as well as professional trainers, behaviorists, and veterinarians working with shelters.

Selling Used Dogs Elsevier Health Sciences

Little is known about normal activity patterns of dogs in the shelter setting, how activity patterns influence adoption, or how activity and behavior develop in the new home after adoption. Our first objective was to compare dogs' daily activity levels in the first week at the shelter and determine if activity levels were influenced by dog-related factors or contributed to the length of stay in the shelter. Activity was monitored via an accelerometer (Actigraph). Seventy-six dogs were enrolled at a local shelter and activity was monitored for 24 hours per day during the first week. Results revealed that dogs display consistent patterns in activity levels between the first and last day of enrollment ($t(74) = 6.67, P = 4.04 \cdot 10^{-9}$), and dogs that display higher levels of activity stay longer at the shelter as compared to those with low activity levels ($t(63) = 2.13, P = 0.04$). In addition, male dogs show higher activity levels compared to females ($t(70) = 1.70, P = 0.09$). Our second objective was to quantify the behavioral changes in newly adopted dogs during the first three months after adoption and to identify the factors that correlate with behavior changes. Among 58 adopters, there were 10 adopters who completed C-BARQ behavioral assessment surveys for all seven post-adoption timepoints between day 3 and week 12. Results revealed that five categories of behavior did not change over time, while nine others varied in their expression between three days and three months. Based on these results, it appears that dog's activity levels in the shelter and dog's behavior changes at home were found to be influenced by the dog's age, sex, and the interactions between the new owners and dogs at home.
