Early childhood is considered a critical but often vulnerable period in a child's development where early identification and intervention can be crucial for improving children's developmental outcomes. Systems and family-centred perspectives are vital to support families and build their capacities to lead normalized lives with improved family quality of life. This book explores the family-centred practices and systems factors which influence families' experiences raising children with complex needs. It also considers the ways in which professionals can work with families to build and support parent and child competence. Conceptual and practical work from Australia, Canada, Europe and the United States present descriptions of and implications for different family system frameworks and early-childhood programs. Contributors in this

edited volume bring together contemporary information that bridges the research to practice gap in supporting families of young children with disabilities or delays. Chapters include: Early Intervention for Young Children with Developmental Delays: Contributions of the Developmental Systems Approach Family Composition and Family Needs in Australia: What Makes a Family? Working with Families in Early Childhood Intervention: Family-Centred Practices in an Individualised Funding Landscape Family Systems and Family-Centred Intervention Practices in Portugal and Spain: Iberian Reflections on Early Childhood Intervention This book will attract the attention scholars of Parenting and Families; Child Development and Childcare. The branch of clinical psychology known as behavior modification or, synonymously, applied behavior analysis, has grown substantially from humble beginnings in the 1960s. Many colleges and universities now offer courses in applied behavior analysis, and more than a few grant degrees in the area. Although they remain controversial, behavior modification procedures have been used to good advantage in dealing with a range of problem behaviors and are now rather widely employed in schools, residential institutions, and other therapeutic facilities. The two hallmarks of applied behavior analysis are utilization of the principles of operant conditioning to improve human behavior and utilization of scientific research methodology to assess the effectiveness of treatments. The present text provides an overview of several issues peculiar to applied behavior analysis research methodology. Six general areas of concern are (a) trends in applied behavior analysis research, (b) assessment and measurement issues, (c) experimental designs and strategies, (d) interpretation of findings, (e) ethical issues in applied behavior analysis, and (f) the societal impact of studies in the area. As evidenced by a sizable number of recently published articles, these topics are of considerable interest to behavior analysts. They also are relevant for students of scientific epistemology and general psychological research methods.
