Learn how to transform your dog's cellular health with the power of nutrigenomics in this ground-breaking new book. Nutrigenomics (a combination of the words nutrition and genome) is the study of how the foods we and our pets eat speak to our cells to regulate gene expression, which in turn plays a huge role in determining whether a person or animal will live a life of vibrant health, or one plagued by illness. Scientists now know that while we can't change the genes we are born with, we can change how those genes behave, which is exactly what authors W. Jean Dodds, DVM and Diana Laverdure show us how to do in their newest book, Canine Nutrigenomics:

Human nutrition expert and author of the critically acclaimed What to Eat, Marion Nestle, Ph.D., M.P.H., has joined forces with Malden C. Nesheim,

Ph.D., a Cornell animal nutrition expert, to write *Feed Your Pet Right*, the first complete, research-based guide to selecting the best, most healthful foods for your cat or dog. Human nutrition expert and author of the critically acclaimed *What to Eat*, Marion Nestle, Ph.D., M.P.H., has joined forces with Malden C. Nesheim, Ph.D., a Cornell animal nutrition expert, to write *Feed Your Pet Right*, the first complete, research-based guide to selecting the best, most healthful foods for your cat or dog. A comprehensive and objective look at the science behind pet food, it tells a fascinating story while evaluating the range of products available and examining the booming pet food industry and its marketing practices. Drs. Nestle and Nesheim also present the results of their unique research into this sometimes secretive industry. Through conversations with pet food manufacturers and firsthand observations, they reveal how some companies have refused to answer questions or permit visits. The authors also analyze food products, basic ingredients, sources of ingredients, and the optimal ways to feed companion animals. In this engaging narrative, they explain how ethical considerations affect pet food research and product development, how pet foods are regulated, and how companies influence veterinary training and advice. They conclude with specific recommendations for pet owners, the pet food industry, and regulators. A road map to the most nutritious diets for cats and dogs, *Feed Your Pet Right* is sure to be a reference classic to which all pet owners will turn for years to come.

How well can you answer pet owners' questions about proper diet and feeding? Canine and Feline Nutrition, 3rd Edition describes the role of nutrition and its effects upon health and wellness and the dietary management of various disorders of dogs and cats. By using the book's cutting-edge research and clinical nutrition information, you'll be able to make recommendations of appropriate pet food and proper feeding guidelines. Pet nutrition experts Linda P. Case, MS, Leighann Daristotle, DVM, PhD, Michael G. Hayek, PhD, and Melody Foess Raasch, DVM, provide complete, head-to-tail coverage and a broad scope of knowledge, so you can help dog and cat owners make sound nutrition and feeding choices to promote their pets' health to prolong their lives. Tables and boxes provide quick reference to the most important clinical information. Key points summarize essential information at a glance. A useful Nutritional Myths and Feeding Practices chapter dispels and corrects common food myths. New clinical information covers a wide range of emerging nutrition topics including the role of the omega-3 and omega-6 fatty acid families in pet health and disease management. Coverage of pet food safety and pet food ingredients includes both commercially and home-prepared foods and provides answers to pet owners' questions on these topics. Completely updated content reflects the latest findings in clinical nutrition research. Information regarding functional ingredients and dietary supplementation provides a scientifically based rationale for recommending or advising against dietary supplements. Guidelines for understanding pet food formulations and health claims differentiate between "market-speak" and actual clinical benefits for patients, with practice advice for evaluating and selecting appropriate foods.

Choosing the right dog food in a world with too many choices

Walking down the dog food aisle in a pet supply superstore can present you with an overwhelming number of choices. Reading about dog food on the internet can make your head spin with so many opinions and stories. And judging the content that you find on dog food packaging can be confusing and misleading. How can the average dog owner make an informed choice in accordance with her dog's age, size and condition? In her latest book,

author Linda Case describes how to make logical, evidence-based decisions for what to feed your dog amid all the options available.

You will learn

- How pet food marketers appeal to your emotions to persuade you to buy a particular type of dog food.
- To distinguish between scientific, evidence-based information and the anecdotal evidence which is so pervasive—and often misleading—in the dog food arena.
- Is there a scientific basis for dog foods designed specifically for puppies, senior dogs, canine athletes—even various breeds of dogs?
- How to read and evaluate all of the material included on a typical package of dog food from the ingredients and label claims (“Natural,” “Anti-Oxidant,” “Low Fat”), to the Nutrient Analysis and Nutritional Adequacy statements.
- How to avoid choice paralysis and the cognitive traps that can interfere with clear decision making.

What experts are saying about *Dog Food Logic*

Pet food is like a religion for many—but now those strong emotional ties can be backed up with fact. Linda Case separates fact from fiction, explains the complex terms and offers a guide to pet nutrition in simple to comprehend language. Unlike other books on this topic, there is no agenda here—except to present facts and then allow pet owners to make their own logical conclusions, letting the kibble drop where it may.

Steve Dale, CABC, columnist Tribune Content Agency; radio host Black Dog Radio Productions and WGN Radio (Chicago); contributing editor USA Weekend; special correspondent Cat Fancy; author Good Cat!

Dog Food Logic is the indispensable guide to the science behind canine nutrition that will help us to make wise, well-informed choices about how and what we feed our dogs. It takes the fear out of trying to understand proper nutrition and will empower us to determine what is best for the health of our dogs.

Claudia Kawczynska, Founder and Editor-in-chief of The Bark

Don't read this book if you want someone to tell you what to feed your dog. This is a book for people who want to learn, in a reasoned and thoughtful way, how to figure it out for themselves. *Dog Food Logic* goes way beyond the usual textbook list of nutritional requirements to cover the pet food industry in all its glory: the history, the business, the marketing, and best of all, the science. Case deftly navigates the most controversial topics in pet food and presents the big picture without interjecting judgment about what approach is best. There's something here for everyone: pet care professionals and dog lovers alike will learn something new from this informative, easy to read, and well researched book.

Natural Health Bible for Dogs & Cats John Wiley & Sons

Anyone who lives with and loves dogs knows that they are smart. Really smart. They understand our body language and emotions, can be trained to perform important services, are devoted companions, and enjoy walks, tricks, dog sports or just hangin' out on the couch. So, how "Dog Smart" are you? What do you know or wish to know about the dog's history, perceptions, understanding of humans, and responses to different training methods? These topics and more come under the scrutiny of the Science Dog in Linda Case's latest myth-busting book. Learn to separate fact from fiction about the relationship between dogs and wolves, whether dominance should be a factor in dog training, what forms of reinforcement work best, and how to apply evidence-based training methods. "Dog Smart" will not only help you to be a better trainer, but will give you the tools for communicating the most current information about dogs to others - including the popular Science Dog character, neighbor Joe (who happens to know a lot about dogs).

Ancestors and canine cousins of our dogs didn't eat "krunchy kibble" or "meat 'n gravy in a can." They ate what they found or caught... and it wasn't

cooked or "enriched" either! It was high in protein, with balanced fats, and usually included a few fruits, vegetables and grasses. Steve Brown, an expert on canine nutrition, shows how you can bring the benefits of the canine ancestral diet to your dog by feeding him differently as little as just one day a week. And no, you won't need to lead a pack of dogs on a hunting expedition! Just follow Steve's well-researched and easy to follow ABCs to make improvements to whatever your dog currently eats. BONUS! Raw food or home prepared feeders will learn how to balance nutrients more precisely, especially fats, for optimum health. A dog diet to get wild about! • Learn about the latest research on the importance of protein and healthy fats in your dog's diet. • Find out why commercial foods can't include these fragile-but-crucial nutrients, and how you can make sure your dog gets them. • Just one day a week, or more frequently if you choose, follow the simple recipes that balance the nutrition in the commercial food you are feeding—wet or dry!
