A new era of opportunity is emerging for advanced practice registered nurses (APRNs) to increasingly address gaps in access to quality healthcare. APRNs must be prepared to practice to the full scope of their education and abilities. As more and more states pass legislation enhancing prescriptive authority and fully autonomous practice for APRNs, a comprehensive resource on prescribing practices is needed. The increasing demands of today's fast-paced healthcare environment require a new level of prescriber expertise. Knowledge about medication characteristics and effectiveness must be accompanied by an understanding of the context and process of prescribing. The Advanced Practice Registered Nurse as a Prescriber provides practicing APRNs and students with the information necessary to make fully informed, rational and ethical decisions as prescribers. This book opens with an overview of the role of the APRN prescriber and moves on to discussing practical issues such as managing difficult patient situations, special considerations when prescribing controlled

substances, the influence of pharmaceutical marketing, state regulation, and legal aspects of prescribing. The book also examines barriers to prescribing, and the concluding chapter underscores key information to build cultural competence when prescribing. An evidence-based resource for all APRNs and APRN students, *The Advanced Practice Registered Nurse as a Prescriber* provides a comprehensive and practical resource essential for APRNs in all advanced practice roles.

Covering the skills needed for pharmaceutical care in a patient-centered pharmacy setting, *Clinical Skills for Pharmacists: A Patient-Focused Approach, 3rd Edition* describes fundamental skills such as communication, physical assessment, and laboratory and diagnostic information, as well as patient case presentation, therapeutic planning, and monitoring of drug intake. Numerous case examples show how skills are applied in clinical situations. Now in full color, this edition adds more illustrations and new coverage on taking a medication history, physical assessment, biomarkers, and drug information. Expert author Karen J. Tietze provides unique, pharmacy-specific coverage that helps you prepare for the NAPLEX and feel confident during patient encounters. Coverage of clinical skills prepares you to be more involved with patients and for greater physical assessment and counselling responsibilities, with discussions of communication, taking a medical history, physical assessment, reviewing lab and diagnostic tests, and monitoring drug therapies. A logical organization promotes skill building, with the development of each new skill building upon prior skills. Learning objectives at the beginning of each chapter highlight important topics. Self-assessment questions at the end of each chapter help in measuring your comprehension of learning objectives. Professional codes of ethics are described in the *Ethics in Pharmacy and Health Care* chapter, including confidentiality, HIPAA, research ethics, ethics and the promotion of drugs, and the use of advance directives in end-of-life decisions. Numerous tables summarize key and routinely needed information. Downloadable, customizable forms on the companion Evolve website make it easier to perform tasks such as monitoring drug intake and for power of attorney.

For patients and their loved ones, no care decisions are more profound than those made near the end of life. Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of distressing symptoms, frequent transitions among care settings, and enormous care responsibilities for families. According to this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. *Dying in America* is a study of the current state of health care for persons of all ages who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care, consistent with their wishes. *Dying in America* evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians and their educational and credentialing bodies, leaders of health care delivery and financing organizations, researchers, public and private funders, religious and community leaders, advocates of better care, journalists, and the public to provide the best care possible for people nearing the end of life.

Dying in America Jones & Bartlett Publishers

Pain is both a symptom and a disease. It manifests in multiple forms and its treatment is complex. Physical, social, economic, and emotional consequences of pain can impair an individual's overall health, well-being, productivity, and relationships in myriad ways. The impact of pain at a population level is vast and, while estimates differ, the Centers for Disease Control and Prevention reported that 50 million U.S. adults are living in pain. In terms of pain's global impact, estimates suggest the problem affects approximately 1 in 5 adults across the world, with nearly 1 in 10 adults newly diagnosed with chronic pain each year. In recent years, the issues surrounding the complexity of pain management have contributed to increased demand for alternative strategies for treating pain. One such strategy is to expand use of topical pain medications—medications applied to intact skin. This nonoral route of administration for pain medication has the potential benefit, in theory, of local activity and fewer systemic side effects. Compounding is an age-old pharmaceutical practice of combining, mixing, or adjusting ingredients to create a tailored medication to meet the needs of a patient. The aim of compounding, historically, has been to provide patients with access to therapeutic alternatives that are safe and effective, especially for people with clinical needs that cannot otherwise be met by commercially available FDA-approved drugs. *Compounded Topical Pain Creams* explores issues regarding the safety and effectiveness of the ingredients in these pain creams. This report analyzes the available scientific data relating to the ingredients used in compounded topical pain creams and offers recommendations regarding the treatment of patients.

In this issue of *Neurosurgery Clinics*, guest editors Drs. Joshua M. Rosenow and Julie G. Pilitsis bring their considerable expertise to the topic of Pain Management. Because pain management often benefits from a multidisciplinary approach, this issue addresses how pain can be assessed and managed with and without medication (e.g., acupuncture, chiropractic medicine, mindfulness meditation) and procedures. Contains 15 relevant,

practice-oriented topics including the multidisciplinary team in pain management; healthcare disparity in pain; nonopioid postoperative pain management; holistic therapy: what works and what does not; machine learning and pain outcomes; and more. Provides in-depth clinical reviews on pain management, offering actionable insights for clinical practice. Presents the latest information on this timely, focused topic under the leadership of experienced editors in the field. Authors synthesize and distill the latest research and practice guidelines to create clinically significant, topic-based reviews.
