health, law, monuments,

organizations, related professions and professionals, shows and showing, sports, training and behavior, types, working dogs. Dogs in popular culture, famous dogs, fictional dogs, films. The dog is a canine mammal of the Order Carnivora. Dogs were first domesticated from wolves at least 12,000 years ago but perhaps as long as 150,000 years ago based on recent genetic fossil evidence and DNA evidence. In this time, the dog has developed into hundreds of breeds with a great degree of variation. This guide details the dog anatomy, breeding, breeds, equipment, health, law, monuments, organizations, related professions and professionals, shows and showing, dog sports, training and behavior, dog types, working dogs, as well as dogs in popular culture, famous dogs, fictional dogs, films about dogs, dogs as pets, and many other related aspects.

In the wake of the considerable cultural changes and social shifts that the United States and all advanced industrial democracies have experienced since the late

1960s and early 1970s, social discourse around the disempowered has changed in demonstrable ways. In *From Property to Family: American Dog Rescue and the Discourse of Compassion*, Andrei Markovits and Katherine Crosby describe a "discourse of compassion" that actually alters the way we treat persons and ideas once scorned by the social mainstream. This "culture turn" has also affected our treatment of animals inaugurating an accompanying "animal turn". In the case of dogs, this shift has increasingly transformed the discursive category of the animal from human companion to human family member. One of the new institutions created by this attitudinal and behavioral change towards dogs has been the breed specific canine rescue organization, examples of which have arisen all over the United States beginning in the early 1980s and massively proliferating in the 1990s and subsequent years. While the growing scholarship on the changed dimension of the human-animal relationship attests to its social, political, moral and intellectual salience to our contemporary world, the

work presented in Markovits and Crosby's book constitutes the first academic research on the particularly important institution of breed specific dog rescue.

A big, inside look at the shocking lack of regulation within the pet food industry, and how readers can dramatically improve the quality of their dogs' lives through diet. What's really going into commercial dog food? The answer is horrifying. Big Kibble is big business: \$75 billion globally. A handful of multi-national corporations dominate the industry and together own as many as 80% of all

brands. This comes as a surprise to most people, but what's even more shocking is how lax the regulations and guidelines are around these products. The guidelines—or lack thereof—for pet food allow producers to include ever-cheaper ingredients, and create ever-larger earnings. For example, “legal” ingredients in kibble include poultry feces, saw dust, expired food, and diseased meat, among other horrors. Many vets still don't know that kibble is not the best food for dogs because Big Kibble funds the nutrition research. So far, these corporations have been able to cut corners and still market and promote feed-grade food as if it were healthful and beneficial—until now. Just as you are what you eat, so is your dog. Once you stop feeding your dog the junk that's in kibble or cans, you have taken the first steps to improving your dog's health, behavior and happiness. You know the unsavory side of Big Tobacco and Big Pharma. Now Shawn Buckley, Dr. Oscar Chavez, and Wendy Paris explain all you need to know about unsavory Big Kibble—and offer a brighter path forward for

you and your pet.

Updating recommendations last made by the National Research Council in the mid-1980s, this report provides nutrient recommendations based on physical activity and stage in life, major factors that influence nutrient needs. It looks at how

nutrients are metabolized in the bodies of dogs and cats, indications of nutrient deficiency, and diseases related to poor nutrition. The report provides a valuable resource for industry professionals formulating diets, scientists setting research agendas, government officials developing regulations for pet food labeling, and as a university textbook for dog and cat nutrition. It can also guide pet owners feeding decisions for their pets with information on specific nutrient needs, characteristics of different types of pet foods, and factors to consider when feeding cats and dogs.

The Plant-Based Dog Food Revolution: With 50 Recipes Simon and Schuster

### **Choosing the right dog food in a world with too many choices**

Walking down the dog food aisle in a pet supply superstore can present you with an overwhelming number of choices.

Reading about dog food on the internet can make your head spin with so many opinions and stories. And judging the content that you find on dog food packaging can be confusing and misleading. How can the average dog owner make an informed choice in accordance with her dog's age, size and condition? In her latest book, author Linda Case describes how to make logical, evidence-based decisions for what to feed your dog amid all the options available.

### **You will learn**

- How pet food marketers appeal to your emotions to persuade you to buy a particular type of dog food.
- To distinguish between scientific, evidence-based information and the anecdotal evidence which is so pervasive—and often misleading—in the dog food arena.
- Is there a scientific basis

for dog foods designed specifically for puppies, senior dogs, canine athletes—even various breeds of dogs?

- How to read and evaluate all of the material included on a typical package of dog food from the ingredients and label claims (“Natural,” “Anti-Oxidant,” “Low Fat”), to the Nutrient Analysis and Nutritional Adequacy statements.
- How to avoid choice paralysis and the cognitive traps that can interfere with clear decision making.

### **What experts are saying about *Dog Food Logic***

Pet food is like a religion for many—but now those strong emotional ties can be backed up with fact. Linda Case separates fact from fiction, explains the complex terms and offers a guide to pet nutrition in simple to comprehend language. Unlike other books on this topic, there is no agenda here—except to present facts and then allow pet owners to make their own logical conclusions, letting the kibble drop where it may.

*Dog Food Logic* is the indispensable guide to the science behind canine nutrition that will help us to make wise, well-informed choices about how and what we feed our dogs. It takes the fear out of trying to understand proper nutrition and will empower us to determine what is best for the health of our dogs.

**Claudia Kawczynska**, Founder and Editor-in-chief of The Bark

Don't read this book if you want someone to tell you what to feed your dog. This is a book for people who want to learn, in a reasoned and thoughtful way, how to figure it out for themselves. *Dog Food Logic* goes way beyond the usual textbook list of nutritional requirements to cover the pet food industry in all its glory: the history, the business, the marketing, and best of all, the science. Case deftly navigates the most controversial topics in pet food and presents the big picture without interjecting judgment about what approach is

best. There's something here for everyone: pet care professionals and dog lovers alike will learn something new from this informative, easy to read, and well researched book.
