more than 12,000 caves, which developed in limestone (including thermal water caves), salt, gypsum, and occasionally in sandstone. It examines these caves and related topics in a format suitable for cavers, while also addressing a broad range of aspects useful for students and researchers. Since the Institute of Speleology was first established by Emil Racovita in 1920, a

great deal of research has been conducted on all cave and karst types. As such, the book examines a variety of scientific fields, including karst geology, hydrogeology, biospeleology, paleoclimatology, mineralogy and archaeology. BoD - Books on Demand This textbook introduces the industrial production and processing of natural resources. It is divided into six major

topics (fats and oils, carbohydrates, lignin, terpenoids, other natural products, biorefinery), which are divided into a total of 20 chapters. Each chapter is self-contained and therefore a compact learning unit, which can be worked on by students in self-study or presented by lecturers. Clear illustrations, flow diagrams, apparatus drawings and photos facilitate the understanding of the subject

matter. All chapters end with a succinct summary, the "Take Home Messages". Each chapter is supplemented by ten short test questions, which can be solved quickly after working through the chapter; the answers are at the end of the book. All chapters contain bibliographical references that focus on essential textbooks and reference works. As a prior knowledge, only basic

knowledge of chemistry is required. Cave and Karst Systems of Romania Springer Science & Business Media  
This book illustrates the diversity of hypogene speleogenetic processes and void-conduit patterns depending on variations of the geological environments by presenting regional and cave-specific case studies. The cases include both well-known and newly recognized hypogene

karst regions and caves of the world. They all focus on geological, hydrogeological, geodynamical and evolutionary contexts of hypogene speleogenesis. The last decade has witnessed the boost in recognition of the possibility, global occurrence, and practical importance of hypogene karstification (speleogenesis), i.e. the development of solutional porosity and permeability by upwelling

flow, independent of recharge from the overlying or immediately adjacent surface. Hypogene karst has been identified and documented in many regions where it was previously overlooked or misinterpreted. The book enriches the basis for generalization and categorization of hypogene karst and thus improves our ability to adequately model hypogene karstification

and predict related porosity and permeability. It is a book which benefits every researcher, student, and practitioner dealing with karst. **Matter and Mind** Springer This book discusses the theoretical and practical issues of glaciokarsts. After a research history, a general description of glaciokarsts is provided. Thereafter, the glacial erosion on karst, the karstic

features of glaciokarsts, the development of these features, the karstic zones of glaciokarsts, surface development of glaciokarsts, case studies on glaciokarsts and an overview of the glaciokarsts of the Earth are presented. *The Scariest Stories You've Ever Heard* University Press of Kentucky This book offers readers a thorough introduction to

the Dinaric Karst System in Croatia. As the first comprehensive book on the country's caves and karst, it presents a wealth of fascinating photographs from its karst underground. To date, ca. 12,000 caves and pits have been confirmed in Croatia, approximately 35% of which contain constant groundwater. Knowing the amount, direction and quality of groundwater that has been

discovered in caves of the Croatian karst allows us to predict with greater certainty the hydrogeological situation of some karst areas where no special drilling or borehole measurements were performed. In the process of building highways in the country's karst regions over the last thirty years, thousands of caverns (speleological features without natural entrances) were

discovered and thoroughly explored. All of them were geologically mapped, surveyed, and photographed in detail. Extensive research was systematically carried out in Croatian karst regions on sections of roads, highways, cuttings, slides, tunnels, bridge foundations, viaducts, etc., while creating ca. 800 kilometers of highways (such as the Zagreb-Rijeka highway,

Zagreb-Split-Dubrovnik highway, Y-Ipsilon of Istria semi-highway, Rijeka-Rupa highway, Zagreb-Zadar semi-highway, and the Rijeka bypass). Some of these caverns contain major chambers like in the "Sveti Rok" tunnel and in some of them, like in the "Vrata" tunnel, it was even necessary to build a bridge. This bridge is the longest one in the world built in a tunnel over a cavern. The book describes this

and many more features of the cave exploration of the Dinaric Karst System of Croatia, making it a valuable resource for researchers, engineers, cavers, and all other readers interested in karst.

Carbonate rock coasts

are found world-wide, from continental shorelines of the Adriatic Sea of Europe to the Yucatan Peninsula of North America, and on tropical islands from Rodrigues Island in the Indian Ocean, to the Mariana Islands in the Pacific Ocean, to the Bahama Islands in the Atlantic Ocean. Such coasts are well known for their unusual and distinctive karst landforms. Karst processes, particularly

those associated with coastal landforms, are proving to be surprisingly unique and complex. This volume presents a comprehensive overview of the processes associated with coastal karst development comparing examples from a broad geographical and geomorphological range of island and continental shoreline/paleoshoreline settings, including a review of pseudokarst

processes that can compete with and overprint dynamic coastal karst landscapes. As effective management of hydrologic resources grows more complex, coastal caves and karst represent fundamental components in associated coastal aquifers, which in the rock record can also form significant petroleum reservoirs. Audience By providing a clearer understanding of the

geological, biological, archaeological and cultural value of coastal caves and karst resources, this volume offers a critical tool to coastal researchers and geoscientists in related fields and to coastal land managers as it illustrates the diversity of coastal karst landforms, the unique processes which formed them, the diversity of resources they harbor and their relationship to

coastal zone preservation strategies and the development of sustainable management approaches. **Imagining Imaging** Springer Most of the "wonders" of our ancient past have come down to us unencumbered by written information. In particular, this is the case of the Great Pyramid of Giza and of many other ancient Egyptian monuments. However, there is no doubt as to

the interest of their builders in the celestial cycles: the "cosmic order" was indeed the true basis of the pharaoh's power. This book takes the reader on a chronological journey through ancient Egypt to explore the relationship between astronomy, landscape, and power during the most flourishing periods of ancient Egyptian civilization. Using the lens of archaeoastron

omy, Giulio Magli reexamines the key monuments and turning points of Egyptian architecture and history, such as the solar deification of King Khufu, builder of the Great Pyramid, the Hatshepsut reign, and the Amarna revolution.

A number of

books have been written on the death camp of Treblinka, but *The Treblinka Death Camp: History, Biographies, Remembrance* is unique. Webb and Chocolaty present the definitive account of one of history's most infamous factories of death where approximately 800,000 people lost their lives. The Nazis who ran it, the Ukrainian guards and maids, the Jewish survivors and the Poles

living in the camp's shadow—every angle is covered in this astonishingly comprehensive work. The book attempts to provide a Roll of Remembrance with biographies of the Jews who perished in the death camp as well as of those who escaped from Treblinka in individual efforts or as part of the mass prisoner uprising on August 2nd, 1943. It also includes unique and previously unpublished

sketches of the camp's ramp area and gas chamber, drawn by the survivors. For this second, revised edition, the authors incorporated new information and provided sources for the Jewish Roll of Remembrance. A significant number of new entries have been added. The Roll of Remembrance has also been greatly expanded to include the names of Jews deported from Germany to

Treblinka. In addition, more names have been added to the Perpetrators' biographies, and other entries have also been enhanced with additional information.

 "What I Didn't Post on Instagram is a collection of essays that explores the fertile territory between womens' lives and social

media. We're smart enough to know nothing is what it seems online, but a healthy dose of context makes a viewing of even the most aspirational, jealousy-inducing Instagram photo an exercise in empathy. What I Didn't Post on Instagram shows us in painstaking detail that we are all the same behind the filters, we are all just trying to be a person. We are just trying to figure out

what to do when we discover that our happily ever afters coexist with things like anxiety, imperfection, and the persistent feeling that we aren't doing it right."--

The book

describes the Ankarana plateau and its cave network in Madagascar, depicting the natural environment of the Plateau as well as the natural processes which created the cave network of more than 100km with many galleries, some are very large and draped with different cave formations and underground rivers are inhabited with crocodiles and giant eels. This place is

famous for its surface landscape formed with tsingy, natural needles formed by the weathering of limestone. The Ankarana is surrounded by native Madagascan rain forest inhabited with lemurs and it was a natural shelter for the Ankarana people whose kings were buried in caves. The cave system has been partially explored since the sixties and exploration is still in progress. The book includes

several maps (geology, topography, hydrology), the survey of the caves and a brief description of the Ankarana Kingdom. Glaciokarsts Checkmark Books

The Jesus Family Tomb LP Rosetta Books "When Floyd Collins became trapped in a cave in southern Kentucky in early 1925, the sensationalism and hysteria of the rescue attempt generated America's first true media spectacle, making Collins's story one of the seminal events of the century. The crowds that gathered outside Sand Cave turned the rescue site into a carnival. Collins's situation was front-page news throughout the country, hourly bulletins interrupted radio programs, and Congress recessed to hear the latest word. Trapped! is both a tense adventure and a brilliant historical recreation of the past. This new edition includes a new epilogue revealing information about the Floyd Collins story that has come to light since the book was first published. *Coastal Karst Landforms* Springer Ice Caves synthesizes the latest research on ice caves from around the world, bringing to light important information that was heretofore buried in various reports, journals, and archives largely outside the public view. Ice caves have become an increasingly

important target for the scientific community in the past decade, as the paleoclimatic information they host offers invaluable information about both present-day and past climate conditions. Ice caves are caves that host perennial ice accumulations and are the least studied members of the cryosphere. They occur in places where peculiar cave morphology and climatic conditions combine to allow for ice to form and persist in otherwise adverse parts of the planet. The book is an informative reference for scientists interested in ice cave studies, climate scientists, geographers, glaciologists, microbiologists, and permafrost and karst scientists. Covers various aspects of ice occurrence in caves, including cave climate, ice genesis and dynamics, and cave fauna. Features an overview of the paleoclimatic significance of ice caves. Includes over 100 color images of ice caves around the world.
