This volume summarizes recent advances in environmental microbiology by providing fascinating insights into the diversity of microbial life that exists on our planet. The first two chapters present theoretical perspectives that help to consolidate our understanding of evolution as an adaptive process by which the niche and habitat of each species develop in a manner that interconnects individual components of an ecosystem. This results in communities that function by simultaneously coordinating their

metabolic and physiologic actions. The third contribution addresses the fossil record of microorganisms, and the subsequent chapters then introduce the microbial life that currently exists in various terrestrial and aquatic ecosystems. Coverage of the geosphere addresses endolithic organisms, life in caves and the deep continental biosphere, including how subsurface microbial life may impact spent nuclear fuel repositories. The discussion of the hydrosphere includes hypersaline environments and arctic food chains. By better understanding examples from the micro biosphere, we can elucidate the many ways in which the niches of different species, both large and small, interconnect within the overlapping habitats of this world, which is governed by its microorganisms.

The *Extremophiles Handbook* brings together the rapidly growing and often scattered information on microbial life in the whole range of extreme environments.

This book will be a useful reference for finding clues to the origin of life and for exploring the biotechnology potential of these fascinating organisms.

Given the recent inertia in EU-Turkey relations in the midst of regional economic and political upheavals, Europeanization of Turkey takes a step back from the latest headlines to provide a comprehensive stocktaking of EU-inspired reform efforts in Turkey with an eye to understanding how effective or ineffective EU conditionality has been in making Turkey's key political institutions, actors and culture more compatible with European norms. In addition to contributing to the theoretical literature on the differential effects of Europeanization on the domestic realm, this volume also expands the existing scope of research to include questions of how socialization through the accession process operates under high levels of uncertainty about the attainability of European Union membership. Applying a uniform analytical framework and the methodology of process tracing, the authors in this volume assess the nature

and degree of change that has occurred in various dimensions of Turkish domestic polity and politics in the context of Turkey's post-1999 EU accession.

Engaging with important practical issues such as whether potential membership in the EU has brought about positive change, in which areas this change is manifest, and how significant this change has been, this book is an essential resource for students, scholars and researchers seeking to understand contemporary relations between the EU and Turkey.

provides a major step forward in

highlighting patterns and variability in the

normative development of the everyday

lives of children, expanding beyond the

usual research populations that have extensive Western schooling in common. The book documents the organization of children's learning and social lives, especially among children whose families have historical roots in the Americas (North, Central, and South), where children traditionally are included and contribute to the activities of their families and communities, and where Western schooling is a recent foreign influence. The findings and theoretical arguments highlight a coherent picture of the importance of the development of children's participation in ongoing activity as presented by authors with extensive experience living and working in such communities.
