A model is presented which describes the support necessary within the health care system to sustain this level of communication and to help caregivers cope with these emotional demands.

Health and Therapeutic Communication Oxford University Press, USA Originally published in 1952 by a towering figure in nursing history, this book stresses the then novel theory of interpersonal relations as it was relevant to the work of nurses. Her framework suggested that interaction phenomena that occur during patient-nurse relationships have qualitative impact on patient outcomes. While the past four decades have seen a substantial expansion in the use and understanding of interpersonal theory, such as cognitive development and general systems theory, this classic book remains a useful foundation for all nurses as so much subsequent work used this work as its starting point. Springer Publishing Company is delighted to make this book available again.

Delmar Thomson Learning Awarded first place in the 2017 AJN Book of the Year Awards in Psychiatric and Mental Health Nursing. This book introduces an innovative technique for therapeutic communication in mental health nursing, expanding the toolkit for nurses seeking to engage challenging patients who have not responded to more conventional therapeutic methods. Linking nursing communication to current research on metaphor and figuration, it is illustrated with accessible clinical examples. Metaphor is a key component of talk-based psychotherapies. But many of the patients whom nurses encounter in the inpatient setting are not good candidates for talk-based approaches, at least initially, because they are violent, withdrawn, highly regressed, or otherwise lacking a vocabulary to convey thoughts and feelings. This book offers specific clinical examples of an approach called the "gestural bridge." This is a method for structuring games and physical activities which connect metaphorically to a patient's personal themes, activating narrative and observational agency and enabling an exchange of meaning to begin at a time when conventional language is not available. Rooted in what nursing theorists have called the "embodied" or "aesthetic" way of knowing, this approach is both specific and easily grasped. Drawing from contemporary work in

literary theory, semiotics, metaphor theory, cognitive science, philosophy, linguistics, psychoanalysis, and the arts, *Therapeutic Communication in Mental Health Nursing* is important reading for advanced-level practitioners, students, and researchers interested in communication and relationship-building in nursing.
