The development of science literacy has the potential to have an enormous impact on real world outcomes. Specifically, developing science literacy may persuade individuals to act. We hope that this book will influence scientists, science journalists, sociologists, anthropologists, communication specialists, political leaders, media outlets, educational institutions, and individual science content consumers. The chapters in this book describe a definition of science literacy that draws on the emotional, cognitive, and social. The authors strive to help prepare individuals to read, write, and speak science in a continuously evolving information landscape. In order to meet these objectives, the chapters examine both qualitative and quantitative research. It is within these frameworks that we can begin to address science literacy in the 21st century.

This book discusses current issues in literacy teacher education and illuminates the complexity of supporting self-efficacious educators to teach language and literacy in the twenty-first century classroom. In three sections, chapter authors first detail how teacher education programs can be revamped to include content and methods to inspire self-efficacy in pre-service teachers, then reimagine how teacher candidates can be set up for success toward obtaining this. The final section encourages readers to ruminate on the interplay among teacher candidates as they transition into practice and work to have both self- and collective- efficacy.

Literacy for the 21st Century Springer Nature

The Literary Agenda is a series of short polemical monographs about the importance of literature and of reading in the wider world and about the state of literary education inside schools and universities. The category of 'the literary' has always been contentious. What is clear, however, is how increasingly it is dismissed or is unrecognised as a way of thinking or an arena for thought. It is sceptically challenged from within, for example, by the sometimes rival claims of cultural history, contextualized explanation, or media studies. It is shaken from without by even greater pressures: by economic exigency and the severe social attitudes that can follow from it; by technological change that may leave the traditional forms of serious human communication looking merely antiquated. For just these reasons this is the right time for renewal, to start reinvigorated work into the meaning and value of literary reading. Being Literate in the 21st Century wrestles with critical, timely questions for 21st-century society. How does literacy change the human brain? What does it mean to be a literate or a non-literate person in the present digital culture: for example, what will be lost in the present reading brain, and what will be gained with different mediums than print? What are the consequences of a digital reading brain for the literary mind and for writing itself? Can knowledge about the reading brain and advances in technology offer new forms of literacy and new forms of knowledge to the peoples in remote regions of the world who would never otherwise become literate? By using both research from cognitive neuroscience, psycholinguistics, child development, and education, and considering literary examples from world literature, Maryanne Wolf plots a course that seeks to preserve the deepest forms of reading from the past, while developing the cognitive skills necessary for this century's next generation.

Part critique of existing policy and practice, part call-to-action, *Technology and Literacy in the Twenty-First Century* explores the complex linkage between technology and literacy that has come to characterize American culture and its public educational system at the end of the twentieth century. To provide a specific case study of this complex cultural formation, award-winning educator Cynthia L. Selfe discusses the Technology Literacy Challenge, an official, federally sponsored literacy project begun in 1996 that has changed—at fundamentally important levels—the definition of literacy and the practices recognized as constituting literate behavior in America. Selfe tries to identify the effects of this new literacy agenda, focusing specifically on what she calls "serious and shameful" inequities it fosters in our culture and in the public education system: among them, the continuing presence of racism, poverty, and illiteracy. She describes how the national project to expand technological literacy came about, what effects it has yielded, why the American public has supported this project, and how teachers of English, language arts, and composition have contributed to this project, despite their best intentions. A primary goal of this study is to make teachers of English and composition increasingly aware of the new literacy agenda and to suggest how they might positively influence its shape and future direction, both in the classroom and in the community. This awareness is an integral part of educators' larger professional responsibility to understand the way in which our culture thinks about and values literacy. Perhaps even more important, argues Selfe, this awareness is part of teachers' ethical responsibility to understand how literacy and literacy instruction directly and continually affect the lived experiences of the individuals and families with whom teachers interact.

Help students meet today's literacy demands with this new book from Terry Roberts and Laura Billings. The authors show how a seminar approach can lead students deeper into a text and improve their speaking, listening, and writing skills, as recommended by the Common Core State

Standards. Roberts and Billings provide easy-to-follow information on implementing Paideia Seminars, in which students discuss a text and ask open-ended questions about it. When teachers use this lesson format, students are exposed to a wide range of increasingly complex texts. They also learn how to collaborate, talk about, and reflect on what they're reading, to make meaning independently and together. Seminars can be done in English class and across the curriculum, using social studies documents or math problems as the texts under discussion. Teaching Critical Thinking also offers an array of practical resources: teacher lesson plans student samples a list of possible ideas and values for discussion a guide to asking good questions during a seminar six full seminar plans (including the texts), covering literature, social studies, and science topics
