Implementing Change Through Learning

Kluwer Law International B.V.
Each year, the New York University Annual Conference on Labor calls on outstanding scholars and practitioners in the field to come together to survey and analyze new developments and trends in U.S. labor law and practice. This volume reproduces the texts (updated and reworked by the authors) presented at the 2007 Conference, the 60th in this venerable and highly influential series, at which the theme was and "Retaliation and Whistleblowers". There could not be a more timely exploration of this complex workplace issue. The United States

Supreme Court, in several pending cases and in the recent landmark cases of *Burlington Northern v. White* and *Garcetti v. Ceballos*, has turned its full attention to workplace retaliation claims. States and municipalities also continue to struggle in laying out the scope of permissible claims under state constitutional and statutory whistleblower provisions and under the common law of wrongful discharge. Among the new and significant issues considered in this volume are the following: new limits on the scope of the cause of action in the wake of *Burlington Northern*; implied protection of employee

activity under ADEA and the FLSA; the scope of and protected activity and under and § 806 of the Sarbanes-Oxley Act; issues of privilege when investigation counsel are used to inform corporate decision-making; state whistleblower laws and the expansion or preemption of common law protections under the common law tort of wrongful discharge; NLRA protection of collective protests by non-union workers; and potential expansion of the formal definition of and jobs and under Garcetti v. Ceballos to foreclose the first amendment avenue. Besides papers by panelists at the Conference, ten other leading practitioners and academics also provide commentary in this volume. As always, this important annual publication offers definitive current scholarship in its theme area of labor and employment law. As such, it will be of inestimable value to practitioners, government officials, academics and others interested in developments in U.S. employment and labor relations law and practice.

This book gathers revised and selected contributions to the 5th Dementia Lab Conference, D-Lab 2021, organized online on January 18-28, 2021, from the Emily Carr University of Art + Design, Vancouver, Canada. It describes original strategies in which design or creative methods have been shown to uncover, support and enhance the abilities of people living with dementia. Papers report on new ideas and findings relating to three main themes: engagement, empowerment and identity. They cover: ethics of inclusion and solutions for shifting the culture of care to be focused on both personal independence and reconnecting with the community; new ways of designing with people living with dementia; strategies for breaking negative stereotypes and preconceived opinions; and approaches to retaining personhood

and dignity. Offering a timely source of information on new design and creative methods to a broad community of industrial, communication, interactive and inclusive designers, this book is also meant to address and inspire various stakeholders and organizations in dementia care.

Survey of Market Absorption Hack the Cybersecurity Interview

This book presents and deconstructs the existing explanations for the differential career development of qualified men and women. It reframes the problem of discrimination in the workplace as a matter of organizational ethics, social responsibility and compliance with existing equal opportunity laws. Sensitive points are identified where social biases, decision-makers' individual economic interests and shortcomings of organizational incentive policies may lead to discrimination against qualified women. The ideas put forward are empirically tested in an original laboratory experiment that examines personnel selection in the male-dominated field of science and technology. It contrasts the selection of applicants with gendered and gender-blind

applications available to subjects under controlled conditions. 30% of participants were high-level decision-makers, which is unprecedented in this field of research. The results, highly relevant for organizational practice, are explained and discussed in detail.

One central and enduring image of the social science researcher is of an individual who commits a great deal of time to collecting original, primary data from a field of enquiry. This approach is often underpinned by a sincerely held belief that key research questions can only be explored by the collection of ever new, and ever greater amounts of data, or that already existing data are insufficient for researchers to test their ideas. Yet such an approach to social science research can be problematic not least because the collection of primary data can be an expensive, time-consuming, and even wasteful approach to social enquiry. Secondary analysis can serve many purposes, as well as being a valid approach in its own right. However, despite its widespread application, secondary analysis is often undervalued or perceived to be the preserve of only those interested in the re-use of large-scale survey data. Highlighting both the theory and practice of secondary analysis and the use of secondary sources, this collection considers the nature of secondary analysis as a research tool; reflects on the definitional debates surrounding terms

such as secondary analysis, data re-use and restudies; illustrates how secondary analysis is used in social science research; and finally reviews the practical, methodological and ethical aspects of secondary analysis. With time at a premium, today's clinicians must rapidly engage their patients while gathering an imposingly large amount of critical information. These clinicians appropriately worry that the "person" beneath the diagnoses will be lost in the shuffle of time constraints, data gathering, and the creation of the electronic health

record. *Psychiatric Interviewing: The Art of Understanding: A Practical Guide for Psychiatrists, Psychologists, Counselors, Social Workers, Nurses, and other Mental Health Professionals*, 3rd Edition tackles these problems head-on, providing flexible and practical solutions for gathering critical information while always attending to the concerns and unique needs of the patient. Within the text, Dr. Shea deftly integrates interviewing techniques from a variety of professional disciplines from psychiatry to clinical psychology, social work, and counseling providing a broad scope of theoretical foundation. Written in the same refreshing, informal writing style that made the first two editions best sellers, the text provides a compelling introduction to all of the core interviewing skills from conveying empathy, effectively utilizing open-ended questions, and forging a powerful therapeutic alliance to sensitively structuring the interview while understanding nonverbal communication at a sophisticated level. Updated to the DSM-5, the text also illustrates how to arrive at a differential diagnosis in a humanistic, caring fashion with the patient treated as a person, not just another case.

Whether the reader is a psychiatric resident or a graduate student in clinical psychology, social work, counseling or psychiatric nursing, the updated third edition is designed to prepare the trainee to function effectively in the hectic worlds of community mental health centers, inpatient units, emergency rooms, and university counseling centers. To do so, the pages are filled with sample questions and examples of interviewing dialogue that bring to life methods for sensitively exploring difficult topics such as domestic violence, drug abuse, incest, antisocial behavior, and taking a sexual history as well as performing complex processes such as the mental status. The expanded chapter on suicide assessment includes an introduction to the internationally acclaimed interviewing strategy for uncovering suicidal ideation, the Chronological Assessment of Suicide Events (CASE Approach). Dr. Shea, the creator of the CASE Approach, then illustrates its techniques in a compelling video demonstrating its effective use in an interview involving a complex presentation of suicidal planning and intent. A key aspect of this text is its unique appeal to

both novice and experienced clinicians. It is designed to grow with the reader as they progress through their graduate training, while providing a reference that the reader will pull off the shelf many times in their subsequent career as a mental health professional. Perhaps the most unique aspect in this regard is the addition of five complete chapters on Advanced and Specialized Interviewing (which comprise Part IV of the book) which appear as bonus chapters in the accompanying e-book without any additional cost to the reader. With over 310 pages, this web-based bonus section provides the reader with essentially two books for the price of one, acquiring not only the expanded core textbook but a set of independent monographs on specialized skill sets that the reader and/or faculty can add to their curriculum as they deem fit.
