Comprehensive Preparedness Guide (CPG) 101 provides guidelines on developing emergency operations plans (EOP). It promotes a common understanding of the fundamentals of risk-informed planning and decision making to help planners examine a hazard or threat and produce integrated, coordinated, and synchronized plans. The goal of CPG 101 is to make the planning process routine across all phases of emergency management and for all homeland security mission areas. This Guide helps planners at all levels of government in their efforts to develop and maintain viable all-hazards, all-threats EOPs. Accomplished properly, planning provides a methodical way to engage the whole community in thinking through the life cycle of a potential crisis,

determining required capabilities, and establishing a framework for roles and responsibilities. It shapes how a community envisions and shares a desired outcome, selects effective ways to achieve it, and communicates expected results. Each jurisdiction's plans must reflect what that community will do to address its specific risks with the unique resources it has or can obtain.

Emergency Management Compliance Manual: A Guide to the Joint Commission Standards Thomas J. Huser, MS, CHSP Over the last decade, catastrophic events such as 9/11 and Hurricane Katrina have turned the spotlight on how healthcare organizations prepare for disasters. Today, from tornados and power outages to pandemic flu, the pressure is on safety officers and emergency management coordinators to protect their facility, staff, and patients from emergencies, no matter what the size. The Joint Commission's emergency management standards require hospitals not only to be prepared to protect their facility, staff, and patients, but also to demonstrate compliance. The *Emergency Management Compliance Manual: A Guide to the Joint Commission Standards* helps you cut through the confusion and provides best practices to help you meet these provisions. The *Emergency Management Compliance Manual* helps you to: Develop emergency management and operations plans that work (e.g., EM.01.01.01 and EM.02.01.01) Define an emergency and complete a hazard vulnerability analysis (e.g., EM.01.01.01)

Address The Joint Commission's six critical areas (e.g., EM.02.01.01 through EM.02.02.15) Understand disaster privileging and assigning responsibilities during an emergency (e.g., EM.02.02.13 and EM.02.02.15) Evaluate the effectiveness of your planning (e.g., EM.03.01.01 and EM.03.01.03) Recognize hotspots and take action before they happen This manual and CD-ROM set has the answers you need to be prepared for the challenges that lie ahead. Trusted safety professional and author Thomas J. Huser, MS, CHSP, strategically provides compliance tips and advice for emergency management compliance success. Safety officers and emergency management coordinators alike use this reference on a daily basis to create policies and procedures to comply with Joint Commission requirements. Bonus CD-ROM included with your binder The accompanying CD-ROM contains electronic versions of all the forms and tools, making it easy to download and customize them to meet your facility's unique needs. A customizable tool that you'll refer to daily This manual is packaged in a portable 10 x 11 binder, making it easy to snap it open and add your own documents and policies.

Although many books have been published on the application of GIS in emergency management and disaster response, this is the first one to bring together a comprehensive discussion of the critical role GIS plays in hospital and healthcare emergency management and disaster response. Illustrating a wide range of practical applications, *GIS in Hospital and Healthcare Security* Joint Commission Resources *Hospital and Healthcare Security*, Fifth Edition, examines the issues inherent to healthcare and hospital security, including licensing, regulatory requirements, litigation, and accreditation standards. Building on the solid foundation laid down in the first four editions, the book looks at the changes that have occurred in healthcare security since the last edition was published in 2001. It consists of 25 chapters and presents examples from Canada, the UK, and the United States. It first provides an overview of the healthcare environment, including categories of healthcare, types of hospitals, the nonhospital side of healthcare, and the different stakeholders. It then describes basic healthcare security risks/vulnerabilities and offers tips on security management

planning. The book also discusses security department organization and staffing, management and supervision of the security force, training of security personnel, security force deployment and patrol activities, employee involvement and awareness of security issues, implementation of physical security safeguards, parking control and security, and emergency preparedness. Healthcare security practitioners and hospital administrators will find this book invaluable. FEATURES AND BENEFITS: * Practical support for healthcare security professionals, including operationally proven policies, and procedures * Specific assistance in preparing plans and materials tailored to healthcare security programs * Summary tables and sample forms bring together key data, facilitating ROI discussions with administrators and other departments * General principles clearly laid out so readers can apply the industry standards most appropriate to their own environment NEW TO THIS EDITION: * Quick-start section for hospital administrators who need an overview of security issues and best practices

The First 72 Hours is the seminal anthology of the perspectives of public and private sector leaders who came together after September 11, 2001 to design more disaster-resilient communities. Under the umbrella of the Suburban Emergency Management Project, these leaders learned from national experts and one another that all disasters are intensely local at first and that most communities are "on their own" immediately following disaster impact--often for as long as 72 hours. This new awareness mandated updating strategies to improve disaster preparedness, particularly in light of the threat of terrorism. A wide gamut of perspectives are laid out in the book, including those of doctors and hospitals, city managers, police officers, firefighters, paramedics, American Red Cross volunteers, hospital accreditors, the media, business managers, utility companies, emergency managers, public health officials, academics, and elected public officials. In their own words, these individuals convey the importance of learning how to map the myriad organizations involved in local disaster preparedness and response; analyzing, refining and rehearsing local disaster roles; and getting to know individual personalities when in specific roles. The First 72 Hours is an essential resource for professionals and

private citizens alike who want to know what kinds of questions must be asked and answered to better prepare their communities to survive future disaster. "There's a special providence in the fall of a sparrow. If it be now, 'tis not to come; if it be not to come, it will be now; if it be not now, yet it will come: the readiness is all." -Hamlet V, II, William Shakespeare

"Emergency Management in Health Care: An All-Hazards Approach, 4th Edition, is a critical resource for organizations to identify emergency planning needs and to develop an effective level of preparedness to address a range of emergencies. This book targets new emergency managers and others involved in planning and implementing an organization's emergency operations plan (EOP) or emergency management plan (EMP) and offers guidance and best practices shaped by Joint Commission's Emergency Management (EM) standards. This new edition contains a comprehensive description of enhanced emergency preparedness requirements under the US Centers for Medicare & Medicaid Services (CMS) final rule for Emergency Preparedness Requirements for Medicare and Medicaid Participating Providers and Suppliers. The new CMS requirements apply to all 17 provider and supplier types, and compliance is required for participation in Medicare. Readers will also benefit from nearly a dozen newly developed case highlights featuring actual health care organizations. Each one shares lessons learned from emergency management planning activities or actual emergency responses to incidents such as mass shootings to active shooters to natural disasters. Also new in the fourth edition are downloadable, adaptable tools for emergency management planning, response, and recovery"--Publisher's description.

Hospital Emergency Response Teams aims to provide authoritative training for hospital personnel in the emergency department, as well community-level medical service personnel, assisting them in times of disaster and emergency. Comprised of six chapters, the book covers various aspects of emergency response. Some of the aspects are the National Incident Management System (NIMS) implementation activities for hospitals and health care systems and the Hospital Incident Command System (HICS) IV missions. The book also explains the implementation issues, requirements, and timelines in establishing an internal HICS IV program. It presents the assessment of likely mass casualty events and potential hospital impact. The book also features appendices for emergency response team checklists, PPE donning and doffing guide, ambulatory and non-ambulatory decontamination setup, ETA exercises, and ETA drills. The book is intended to provide understanding of emergency response to first emergency medicine professionals, first responders, security staff, community-level disaster planners, and public health and disaster management researchers. Common sense approach shows what

really works, not what is theoretically achievable. Forms, checklists, and guidelines can be used to develop concrete response plans, validate existing operations, or simply expand knowledge base. The latest from OSHA, Joint Commission and NIMS (National Incident Management System) Cross-disciplinary author team ensures material is appropriate for all member of this important collaboration.

Emergency Preparedness in Healthcare Organizations HC Pro, Inc. With the increased concern about bioterrorism -- whether chemical, biological or radiological -- there is an emphasis on hospital preparedness for serious mass-casualty incidents (MCIs). And even though The Joint Commission on Accreditation of Healthcare Organizations (JCAHO) began requiring hazard vulnerability analysis (HVA) as part of its environment of care program when it revised the emergency management standards in January 2001, most hospitals have not yet developed adequate emergency plans either because of monetary concerns or confusion about the best way to get started.

The Emergency Management Handbook Joint Commission on Compliance made easy. This fully revised compliance guide now contains more than 35 sample policies and procedures to help you develop or refine your own EC plan. For each of the JCAHO's seven current EC plans: Safety, Security, Hazardous Materials and Wastes, Emergency Management (formerly Emergency Preparedness), Fire Prevention, Medical Equipment, and Utilities Management you get step-by-step compliance plans, tips, and warnings of potential pitfalls in capsule descriptions of step-by-step breakdown of what you need to know: What the requirement says, What the requirement means, What you need to do to comply. Easy-to-understand breakdowns of code requirements, explanations in plain English, Easy-to-implement strategies, tools, and compliance forms. Published together in a loose-leaf binder and on a companion CD-ROM, these materials including a new feature of customizable management plans for each function of the EC are ready for you to customize and distribute to your staff. Instead of pondering the JCAHO's complicated regulatory language, you have instant access to the precise details of what the surveyors are looking for during their inspections. You also get the reasons behind the rules to help you go beyond what to do and how to do it to understanding why these standards are in place.

Currently Army hospitals receive guidance and standards for the establishment and maintenance of an emergency management plan (EMP) from multiple entities, including the United States Army Medical Command (MEDCOM), the Joint Commission on Accreditation of Healthcare Organizations (JCAHO), and the National Fire Protection Agency (NFPA). These organizations require the establishment of an EMP, yet mechanisms to measure its effectiveness are not provided. JCAHO accreditation is often cited as an indicator of effectiveness, yet it is merely an indicator of compliance with performance measures. Compliance does not tell the hospital or its stakeholders whether or not the staff is adequately trained on the emergency management plans and if they can effectively execute the plan as written. Survey results show that approximately 90 percent of the staff indicated they were in need of additional training and almost 50 percent indicated the most beneficial training would be section level training/drills/exercises that focused on individual section specific responsibilities.
