Intended to equip financial analysts for the practical challenges of contemporary business practice. Intended for readers already conversant with basic accounting principles, it addresses the complications that arise when analysts attempt to apply textbook-derived knowledge to the real world of extending credit and investing in securities. Emphasizing the adversarial nature of financial reporting throughout, it discusses the complex motivations of issuers and encourages skepticism about what might seem straightforward financial reporting. In an effort to reflect current financial developments, it uses a number of highly leveraged companies among its examples.

How to Read a Financial Report McGraw Hill Professional

The financial statements of a company record important financial data on every aspect of a business's activities. As such they can be evaluated on the basis of past, current, and projected performance. In general, financial statements are centered around generally accepted accounting principles

(GAAP) in the U.S. These principles require a company to create and maintain three main financial statements: the balance sheet, the income statement, and the cash flow statement. Public companies have stricter standards for financial statement reporting. Public companies must follow GAAP standards which requires accrual accounting. Private companies have greater flexibility in their financial statement preparation and also have the option to use either accrual or cash accounting. Several techniques are commonly used as part of financial statement analysis. Three of the most important techniques include horizontal analysis, vertical analysis, and ratio analysis. Horizontal analysis compares data horizontally, by analyzing values of line items across two or more years. Vertical analysis looks at the vertical affects line items have on other parts of the business and also the business's proportions. Ratio analysis uses important ratio metrics to calculate statistical relationships.

With an insider's view of the mind of the master, Mary Buffett and David Clark have written a simple guide for reading financial statements from Warren Buffett's successful perspective. Buffett and Clark clearly outline Warren Buffett's strategies in a way that will appeal to newcomers and seasoned Buffettologists alike. Inspired by the seminal work of Buffett's mentor, Benjamin Graham (The Interpretation of Financial Statements, 1937), this book presents Buffett's interpretation of financial statements with anecdotes and quotes from the master investor himself. Potential investors will discover: • Buffett's time-tested dos and don'ts for interpreting an income statement and balance sheet • Why high research and development costs can kill a great business • How much debt Buffett thinks a company can carry before it becomes too dangerous to touch • The financial ratios and calculations that Buffett uses to identify the company with a durable competitive advantage -- which he believes makes for the winning long-term investment • How Buffett uses financial statements to value a company • What kinds of companies Warren stays away from no matter how cheap their selling price Once readers complete and master Buffett's simple financial calculations and methods for interpreting a company's financial statement, they'll be well on their way to identifying which companies are going to be tomorrow's winners -- and which will be the losers they should avoid at all costs. Destined to become a classic in the world of investment books, Warren Buffett and the Interpretation of Financial Statements is the perfect companion volume to The New Buffettology and The Tao of Warren Buffett.

Excerpt from Analysis of Financial Statements: One of a Series of Lectures in a Systematic Course Too much stress cannot be laid upon the importance of a proper analysis of the financial statement. The statement is a photograph of the business and, if not correctly viewed, the whole complexion of the risk is altered and the possibilities of use defeated. The financial statement assumes an important place in modern management. Executives, officers, and directors of corporations should be able to make an actual analysis of the financial statement of their business if they are to plan constructively and wisely. Investors are able to buy securities on a more scientific basis when they are able to view the exact conditions and contingencies of a business as shown in its statements. Credit men make daily use of statements. While it is time in granting credit, whether in the form of loans or merchandise, that the personal equation and the knowledge of the debt-paying record of the subject are important features, the story told by the financial statement is the fundamental basis upon which credit is granted. Accountants, of course, are interested in the accounting science and the technique involved in the preparation of statements, as well as in the use they serve. The exact purpose of the analysis differs somewhat with these classes. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
