Robert Baker Aitken's correspondence with Buddhist sympathizers and solo practitioners reveals a significant, little-understood aspect of American Buddhism. Love, Roshi explores the relationship between Robert Baker Aitken (1917–2010), American Zen teacher and author, and his distant correspondents, individuals drawn to Zen teachings and practice through books. Aitken, founder of the Honolulu Diamond Sangha, promoted Zen to a wide audience in works such as *Taking the Path of Zen* and *The Mind of Clover*. Aitken's twentieth-century American Zen valued social justice and was compatible with work and family life. Helen J. Baroni makes use of Aitken's extensive correspondence preserved in an archive at the University of Hawaii to provide a window to view the beliefs and practices of the least-studied—and a difficult to study—segment of the Western Buddhist community, Buddhist sympathizers and solo practitioners. The book looks at the concerns of these correspondents, which included questions on meditation, dealing with isolation as a Buddhist, finding teachers and disillusion with teachers, and being a Buddhist in prison, among a myriad of other matters. The writers' letters reveal much about their notion of Zen and their image of a "Zen master." Coverage of Aitken's responses provides insight into the accommodation of solo practitioners and into the development of a particular strain of American Buddhism. Helen J. Baroni is Associate Professor of Religion at the University of Hawai'i at Manoa. She is the author of *Iron Eyes: The Life and Teachings of Ōbaku Zen Master Tetsugen Dōkō*, also published by SUNY Press.

This book provides an overview of Animal-Assisted Activities (AAA) and Animal-Assisted Therapy (AAT) and demonstrates how they can be incorporated into solution-focused treatment programs. Pichot, focusing on the use of therapy dogs, starts with a discussion of the basics of AAA/T and solution-focused therapy, as well as what every practitioner should know about dogs before partnering with them. Successfully combining all of this into an effective treatment program is considered next. Pichot draws upon her own experience developing an AAA/T program in the substance abuse counseling program at a county public health agency to illustrate the effective implementation of such a program and the struggles and lessons learned in doing so. Using AAA/T with special populations, cultural considerations, and the impact a therapy dog can have on the handler. New in this edition are client scenarios that demonstrate the therapist's thought process when making clinical decisions about when and how to use a therapy dog. Sample forms and treatment plans are also provided that professionals can use to modify or structure in their work with clients. The concepts and information provided in this valuable guide will be helpful for any therapist regardless of whether he or she is in private practice or working in an agency setting.

Qualitative Research for Occupational and Physical Therapists is a practical guide for students and professionals in rehabilitation intended to encourage their active engagement with this major approach to research design and implementation. Carpenter and Suto address the specific needs of the therapy professions by examining the unique challenges of conducting qualitative research in community and institutional rehabilitation settings. Whilst grounded in contemporary literature, the book puts theory into action with examples of research and a demonstration of how such studies have directly influenced rehabilitation practice. The book covers the entire research process from the initial preparation through to implementing, interpreting, disseminating, and ensuring the quality of qualitative research.

In the era of COVID-19, many people have suffered high levels of stress and mental health problems. To cope with the widespread of suffering (physical, psychological, social, and economical) the positive psychology of personal happiness is no longer the sole approach to examine personal wellbeing. Other approaches such as Viktor Frankl's theory of self-transcendence provide a promising framework for research and intervention on how to achieve resilience, wellbeing, and happiness through overcoming suffering and self-transcendence. The existential positive psychology of suffering complements the positive psychology of happiness, which is championed by Martin Seligman, as two equal halves of the circle of wellbeing and optimal mental health. This Research Topic aims to examine the different approaches to Positive Psychology and their influence on individual

wellbeing during the COVID-19 era. One of the exciting development in the positive psychology of wellbeing is the mounting research on the adaptive benefits of negative emotions, such as shame, guilt, and anger, as well as the dialectical process of balancing negative and positive emotions. As an example, based on all the empirical research and Frankl's self-transcendence model, Wong has developed the existential positive psychology of suffering (PP2.0) as the foundation for flourishing. Here are a few main tenets of PP2.0: (1) Life is suffering and a constant struggle throughout every stage of development, (2) The search for self-transcendence is a primary motive guided by the meaning mindset and mindful mindset. (3) Wellbeing cannot be sustainable without overcoming and transforming suffering. In this Research Topic we welcome diverse approaches discussing the following points: • The dialectic process of overcoming the challenges of every stage of development as necessary for personal growth and self-transcendence; • The role of self-transcendence in resilience, virtue, meaning, and happiness; • The upside of negative emotions; • The new science of resilience based on cultivating the resilient mindset and character; • How to make the best use of suffering to achieve out potentials & mental health.

As occupational therapy celebrates its centennial in 2017, attention returns to the profession's founding belief in the value of therapeutic occupations as a way to remediate illness and maintain health. The founders emphasized the importance of establishing a therapeutic relationship with each client and designing an intervention plan based on the knowledge about a client's context and environment, values, goals, and needs. Using today's lexicon, the profession's founders proposed a vision for the profession that was occupation based, client centered, and evidence based--the vision articulated in the third edition of the Occupational Therapy Practice Framework: Domain and Process. The Framework is a must-have official document from the American Occupational Therapy Association. Intended for occupational therapy practitioners and students, other health care professionals, educators, researchers, payers, and consumers, the Framework summarizes the interrelated constructs that describe occupational therapy practice. In addition to the creation of a new preface to set the tone for the work, this new edition includes the following highlights: a redefinition of the overarching statement describing occupational therapy's domain; a new definition of clients that includes persons, groups, and populations; further delineation of the profession's relationship to organizations; inclusion of activity demands as part of the process; and even more up-to-date analysis and guidance for today's occupational therapy practitioners. Achieving health, well-being, and participation in life through engagement in occupation is the overarching statement that describes the domain and process of occupational therapy in the fullest sense. The Framework can provide the structure and guidance that practitioners can use to meet this important goal.
