Even within the nursing field, there are a wide variety of positions, and this book shows samples of resumes and cover letters that have worked. This title will be a valuable resource to nursing professionals who seek clinical nursing or administrative positions. Newly minted nurses and newcomers to the field will learn how to show off their clinical rotations to best advantage. Nurses often change fields, too, and the book includes resumes of nurses who have successfully transitioned into pharmaceutical sales and other areas. A bonus of this book is that it includes samples of paperwork involved in getting federal government jobs: specialized resumes and the federal resumix as well as the write-ups for the Knowledge, Skills and Abilities (KSAs) which are often required for government positions. This book will show nurses how to maximize their career potential, get federal nursing positions, and change fields if they want to. (This is the 25th title in PREP's Real-Resumes Series.)

The challenges to better health services in Africa are well known: Africa lags behind all regions of the world, including other developing regions, on all indicators of better health. A recent report from the World Health Organisation for instance shows that while Africa has 20% of the world's sick people, it has only 4% of its healthcare workers - many of them vulnerable to the high mortality rate associated with malaria and notably the AIDS epidemic. The state of investment in healthcare infrastructure is also grossly inadequate

as is the efficiency of healthcare delivery. But does this need to be so? What factors are responsible for this unacceptable state of affairs?

Contributors to the volume examine the evolution of healthcare services in Africa, the ongoing national, regional and continental efforts to improve the delivery of healthcare in the continent, and the direct and indirect obstacles militating against the maturation of the services and their efficient delivery. The contributors - all distinguished experts in the field, who hold either challenging responsibilities in health in Africa or have worked in multiple components of the healthcare delivery system in the continent - also provide powerful personal insights and lessons learned in their current or previous work in the health sector in Africa. Some of the themes covered include clinical care and centers of excellence, healthcare finance and resource mobilization, primary health care systems and community health; preventive care and risk reduction in health; the role of reference laboratories; clinical research and partnerships, the role of epidemiology, statistics, monitoring and evaluation in health services; the role of the African Diaspora, and the role of politics in the organization of healthcare and the training of medical and other health professionals. From their analyses and experience the authors articulate proven strategies and solutions based on consensus expert opinions on how to improve the quality of health services and health outcomes in the continent. *Emergency Medical Services Systems Development Act of 1973* Elsevier Health Sciences
