Interviewing the Patient St. Martin's Griffin

Doctors are taught how to cure people. But they don't always know how to care for them. Hardly anyone is happy with American healthcare these days. Patients are getting sicker and going

bankrupt from medical bills. Doctors are burning out and making dangerous mistakes. Both parties blame our nation's outdated and dysfunctional healthcare system. But that's only part of the problem. In this important and timely book, Dr. Robert Pearl shines a light on the unseen and often toxic culture of medicine. Today's physicians have a surprising disdain for technology, an unhealthy obsession with status, and an increasingly complicated relationship with their patients. All of this can be traced back to their earliest experiences in medical school, where doctors inherit a set of norms, beliefs, and expectations that shape almost every decision they make, with profound consequences for the rest of us. *Uncaring* draws an original and revealing portrait of what it's

actually like to be a doctor. It illuminates the complex and intimidating world of medicine for readers, and in the end offers a clear plan to save American healthcare.

Do YOU want to be a doctor? Accelerated medical (BA/MD) programs allow you to apply to medical school directly from high school. They are the Fastest! Cheapest! Easiest! way to get into medical school and guarantee your future! More people are applying to accelerated programs every year. Don't let this opportunity pass you by. From High School To Med. School is designed to be a complete step-by-step "tool-kit" for the entire process. Along with www.acceleratedmed.com, this book

helps you "Get with the Program!" Here are just a few of the questions answered within: · If I go to an Ivy League school, won't I be able to get into medical school anyway? · What do I need to do in high school to be accepted into a medical program? · What kinds of questions will they ask me during the interview? · How will I deal with only being in college for two or three years? · Do younger medical students perform well compared to older medical students? Here's what people are saying about From High School to Med. School: "A BA/MD program gives students who are interested in a career in medicine a 'path of least resistance,'..." -Academic Medicine (full text inside) "Fills an important need for individuals considering this option--very

informative." -Assoc VP, AAMC "This book should be required reading for all high school counselors and students interested in medicine." -Pre-medical Advisor "The authors are to be congratulated... They have chosen a topic that is relevant to a great number of high school students, and treated it with detail and brevity, candor and tact, and above all, clarity." -Dr. Balamurali Ambati, the "World's Youngest Doctor" *The Peace Corps in Belize* Kogan Page Publishers
What does it take to match into the specialty of your choice? This question is hotly debated and surveys of applicants and program directors find sharp divisions on the topic. In a recent survey, the authors concluded that "there are significant differences between program

directors' and medical students' perceptions of which factors are important in the residency selection process" (Brandenburg 2005). In advising students over the years, we have come to realize that misperceptions abound, with applicants frequently overestimating or underestimating certain residency selection criteria. These misperceptions may result in a failure to match. From our own experiences as students, and in the process of counseling applicants, we know how difficult, anxiety-provoking, and mysterious the residency selection process is. In this book, we answer the question of what it takes to match successfully. We provide specific evidence-based advice to maximize your chances of a successful match. Who

actually chooses the residents? We review the data on the decision makers. What do these decision makers care about? We review the data on the criteria that matter to them. How can you convince them that you would be the right resident for their program? We provide concrete, practical recommendations based on this data. At every step of the process, our recommendations are meant to maximize the impact of your application. Utilizing a unique combination of evidence-based advice and an insiders' perspective, this book will help you achieve your ultimate goal: The Successful Match.

Robert H. Coombs's *Surviving Medical School* offers both an orientation to the

hectic, anxious realm of medical education and a resource for coping with and succeeding in that environment. Coombs begins with questions regarding expectations and intellectual and emotional capacities. The author then examines matters related to career doubt and alienation often experienced by medical students. Following an orientation to the clinical experience, the book concludes with discussions about physician fallibility, residency, and professional practice. *Surviving Medical School* is for medical students at all levels and provides excellent preparation for baccalaureate students anticipating medical school. It also serves as a shelf reference for medical school instructors, advisors, and counselors.

The authors of *Make Just One Change* argue that formulating one's own questions is "the single most essential skill for learning"—and one that should be taught to all students. They also argue that it should be taught in the simplest way possible. Drawing on twenty years of experience, the authors present the Question Formulation Technique, a concise and powerful protocol that enables learners to produce their own questions, improve their questions, and strategize how to use them. *Make Just One Change* features the voices and experiences of teachers in classrooms across the country to illustrate the use of the Question Formulation Technique across grade levels and subject areas and with different kinds of learners.

The vivid, often gruesome portrait of the 18th-century pioneering surgeon and father of modern medicine, John Hunter. When Robert Louis Stevenson wrote his gothic horror story of Dr. Jekyll and Mr. Hyde, he based the house of the genial doctor-turned-fiend on the home of John Hunter. The choice was understandable, for Hunter was both widely acclaimed and greatly feared. From humble origins, John Hunter rose to become the most famous anatomist and surgeon of the eighteenth century. In an age when operations were crude, extremely painful, and often fatal, he rejected medieval traditions to forge a revolution in surgery founded on pioneering scientific experiments. Using the

knowledge he gained from countless human dissections, Hunter worked to improve medical care for both the poorest and the best-known figures of the era—including Sir Joshua Reynolds and the young Lord Byron. An insatiable student of all life-forms, Hunter was also an expert naturalist. He kept exotic creatures in his country menagerie and dissected the first animals brought back by Captain Cook from Australia. Ultimately his research led him to expound highly controversial views on the age of the earth, as well as equally heretical beliefs on the origins of life more than sixty years before Darwin published his famous theory. Although a central figure of the Enlightenment,

Hunter's tireless quest for human corpses immersed him deep in the sinister world of body snatching. He paid exorbitant sums for stolen cadavers and even plotted successfully to steal the body of Charles Byrne, famous in his day as the "Irish giant." In *The Knife Man*, Wendy Moore unveils John Hunter's murky and macabre world—a world characterized by public hangings, secret expeditions to dank churchyards, and gruesome human dissections in pungent attic rooms. This is a fascinating portrait of a remarkable pioneer and his determined struggle to haul surgery out of the realms of meaningless superstitious ritual and into the dawn of modern medicine.
