*International GAAP 2020* Walter de Gruyter GmbH & Co KG  
International GAAP 2020 is a comprehensive guide to interpreting and implementing International Financial Reporting Standards (IFRS), setting IFRS in a relevant business context, and providing insights into how complex practical issues should be resolved in the real world of global financial reporting. This book is an essential tool for anyone applying, auditing, interpreting, regulating, studying, or teaching IFRS. Written by financial reporting professionals from around the world, this guide to reporting under IFRS provides a global perspective, clearly explaining complex technical accounting issues and setting IFRS in a practical context. Numerous worked examples and hundreds of illustrations from the published financial reports of major listed companies from around the world are included. The 2020 edition has been fully revised and updated with information on the latest IFRS changes and current issues.

*Accountants' Handbook, Financial Accounting and General Topics*  
John Wiley & Sons

This highly regarded reference is relied on by a considerable part of the accounting profession in their day-to-day work. This comprehensive resource is widely recognized and relied on as a single reference source that provides answers to all reasonable questions on accounting and financial reporting asked by accountants, auditors, bankers, lawyers, financial analysts, and other preparers and users of accounting information. The new edition reflects the new FASB Codification, and includes expanded coverage of fair value and guidance on developing fair value estimates, fraud risk and exposure, healthcare, and IFRS.

**Human Resource Management** John Wiley & Sons  
The most authoritative financial reporting text for second and third-year courses, Loftus' *Financial Reporting* is back in a new fourth edition with updates to the Australian Accounting Standards (up to May 2022), making it the most current book on

the market. New to this edition is an entire chapter on ethics, a completely reworked sustainability chapter and an expanded integration of New Zealand standards and examples. The new edition encourages students to not only develop a conceptual understanding of the content, but to also apply it in a variety of practical contexts. Supported by a variety of digital resources like interactive worked problems and questions with immediate feedback, *Financial Reporting* is a textbook designed for an engaging, interactive learning experience.

Due to the emergence of IFRS as the required convention for reporting to stock exchanges in the European Union and other important markets, accountants must gain a strong understanding of these standards. *Intermediate Accounting* integrates this new information throughout the chapters so they'll learn how to apply the new global accounting standards. Global examples are presented to clearly show how the information is utilized in the field. The use of various currencies is also explored, which is critical for accountants to know in today's global businesses environment.

**Organizational Achievement and Failure in Information Technology Management** John Wiley & Sons

The task of structuring information on built environment has presented challenges to the research community, software developers and the industry for the last 20 years. Recent work has taken advantage of Web and industry standards such as XML, OWL, IFC and STEP. Another important technology for the fragmented AEC industry is digital communication. Wired or wireless, it brings together architects, engineers and construction site workers, enabling them to exchange information, communicate and work together. Virtual enterprise organization structures, involving mobile teams over distance, are highly compatible with the needs of the construction industry.

The health of scientific enterprise has become a critical political and social issue as nation states tackle austerity, diversity, global challenges, whilst simultaneously supporting a competitive and innovative national economy. A key asset in achieving such ambitions is for a scholarly information system which enables the

fruits of the research effort to be disseminated efficiently. As the information support system struggles with adapting from a print-based to a digital process, the dysfunctionality current within STEM publishing in particular becomes evident. New ways of supporting research are emerging which require a new approach to publishing, an approach which takes on board the many demographic, social, technical and administrative changes taking place in both science itself and society. A radical strategic assessment is required and this book tracks key aspects required for any new future strategy. This book provides a catalogue of issues to which a future STEM information industry will need to adapt. They range from the effects of technology on the neurological processes of research to the growing use of technology to speed up the exchange of information among groups and laboratories; from considerations about quality control yet maintaining intellectual ownership; from changing from an elitist STEM system favouring academics to a more democratic process with wider appeal. There is the neglected non-academic market and its need to share in the results of the research effort, often through partnership and being part of a 'hive mind'. This is the large world of the unaffiliated knowledge workers, of which academia is numerically but a small part. The many changes taking place in scholarly information dictate that the future is unlikely to be a smooth and gradual evolution from the past. Radical new approaches are required, a revolution which takes on board the perfect storm of changes listed in this book. Just as such changes have changed the face of industries such as music and retail in recent years, so similar dramatic changes are likely to result in a restructuring of STEM into a more technologically-focused industry within the next decade. The implications for the current STEM stakeholders are profound.

*Conference on New Technology* MIT Press

This volume is part of a publication series emerging from an international interdisciplinary study group on "New Technologies and Work (NeTWork)". NeTWork is sponsored by the Werner-Reimers Foundation (Bad Homburg, Germany) and the Maison des Sciences de l'Homme (Paris). The NeTWork study group has set itself the task of intellectually penetrating various problem domains posed by the introduction and spread of new technologies in work settings. This problem focus requires interdisciplinary co-operation. The usual mode of operating is to

identify an important problem within the NeTWork scope, to attempt to prestructure it and then to invite original contributions from European researchers or research teams actively involved in relevant analytic or developmental work. A specific workshop serves to cross-fertilize the different approaches and to help to integrate more fully the individual contributions. The concept of telematics refers to the integration of computer, telecommunication and information technologies. It alludes to the opportunities presented by the technical means to communicate and transfer data over large distances by "intelligent equipment". Teleshopping, teleconferencing, teleworking and telebanking are but a few examples of a development which influences both public and private environments. Both households and workplaces are likely to be thoroughly changed by telematics. This publication emphasises the application of telematics in working environments. The central questions of the book are: How will the present and future development of telematics effect the nature and organization of work, and under which conditions will this development be optimal? From the various contributions it is clear that telematics is not a single direct cause or determinant of particular changes in work and organization. The development and application of telematics depend on decision making of actors at a political scene both outside and inside the work organizations. The effects of the use of these applications appear to be co-determined by many other factors. In fact, the technology interacts with political, economic, and social factors in a complex process that shapes new organizational forms and work relationships.

The tech sectors are the least understood portion of the healthcare system, but the ones that supply most of the innovation in healthcare services and generate most revenue. Fully updated for this third edition, *The Business of Healthcare Innovation* is a wide-ranging analysis of business models and trends in the tech sectors of the healthcare industry. It provides a thorough overview of and introduction to the innovative sectors that fuel improvements in healthcare: pharmaceuticals, biotechnology, life science startups, medical devices and information technology. For each sector, the book examines the trends in scientific innovation, the science behind that innovation, the business and revenue models pursued to commercialize that innovation, the regulatory constraints within which each sector must operate and the growing issues posed by activist payers and consumers. From a combination of academic and industry perspectives, the authors show why healthcare sectors are such an important source of growth in any nation's economy.

Technology has become an integral part of our everyday lives. This trend in ubiquitous technology has also found its way into the

learning process at every level of education. The Handbook of Research on Education and Technology in a Changing Society offers an in-depth description of concepts related to different areas, issues, and trends within education and technological integration in modern society. This handbook includes definitions and terms, as well as explanations of concepts and processes regarding the integration of technology into education. Addressing all pertinent issues and concerns in education and technology in our changing society with a wide breadth of discussion, this handbook is an essential collection for educators, academicians, students, researchers, and librarians. Government and Not-for-Profit Accounting John Wiley & Sons Information technology has served to revolutionise the use, exchange, and protection of information. The growth of the internet, the convergence of technologies as well as the development of user generated and social networking sites has meant that significant amounts of person data as well as copyrighted materials are now readily accessible. Within this changing cultural landscape the legal concepts of privacy, data protection, intellectual property and criminality have necessarily had to develop and adapt. In this volume a number of international scholars consider this process and whether it has merely been a question of the law adapting to technology or whether technology has been forced to adapt to law. Technologies have wrought a culture shift it is therefore apposite to ask whether legal concepts, as reflections of culture, should also change. It is in this volume where papers on privacy date protection, intellectual protection and cyber crime begin address this question. This book was published as a special issue of International review of Law Computers and Technology.
