Most transitional economies have adopted a gradual approach to reform of their financial systems, maintaining the banking system's passive role. But the financial restructuring of banks and enterprises should be undertaken simultaneously -- early in the transition.

Financial markets are complex. Regulators strive to predict ways in which they can malfunction and create rules to prevent this from happening, yet behavioural impacts are often overlooked. This book explores how behavioural finance can go hand-in-hand with traditional methods to help banks and regulators create better policies. It also demonstrates how the behavioural finance revolution has opened the way to a more integrated approach to the analysis of economic phenomena. This book adopts a forward-looking agenda that takes account of existing practices based on behavioural science. It focuses on how to make financial markets an arena for fair play as a central criterion for securing and enhancing societal well being. It examines how bounded rationality, heuristic decision making, aversion to losses, endowment effects and social preferences may impact financial

decisions, thus exposing the flaws in traditional forecasting methods that rely on an over-simplified representation of the individual. With contributions from both academics and practitioners, this book will be fundamental reading for researchers in the finance and behavioural economics. Regulators who wish to utilise behavioural policymaking will also find this a beneficial read.

The 2008 global financial crisis, together with the experience of de-industrialization across Western Europe over the last three decades, has focussed attention on financial regulation and industrial policy. Industry and finance policies have largely been discussed separately, and this book argues that the two should be considered together, in both analysis and policy formulation that deals with critical questions of how finance has intervened in industrial restructuring and how it might better serve the real economy. Moreover, policy debates have paid relatively little attention to the heterogeneous economic structures and growth trajectories of European economies, and the interconnectedness and interdependencies of growth paths that present specific challenges to policy and highlight the need for cooperation across the region. This book brings together leading scholars and policy makers to contribute to policy debates in three ways. First, it includes current discussions of banking policy, regulation, and reform to reassert the need for financial institutions that will back up and finance an industrial policy to revive the European economy. Second, it reviews the role of industrial and investment policy in supporting innovation, creating jobs, and generating sustainable economic growth. Third, it advances alternative policy proposals aimed at generating sustainable economic growth and employment in Europe. Part I analyses the nature of growth, industrial, and economic restructuring in relation to finance in the lead up to the crisis, at regional, national, and sector levels. Part II presents alternative and progressive policy proposals for growth and employment in Europe in light of the analysis presented in Part I.

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, *The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution* includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalindex.

The primary purpose of this study is to develop a framework that will explain the behavior of financial intermediaries and, more precisely, their pricing policies. As financial intermediation is the business of financial assets and liabilities, use is made of concepts and models developed tradition ally in Finance and Economics to end up with recommendations not only for optimal choices of interest rates but also for proper regulation and more sensible accounting methods. Also, the econometric implications of deposit rates stickiness are examined and empirically tested on Belgian data. My debt to many people has been growing during these years and it is a great pleasure to print a text and have the opportunity to thank those who have been so helpful. First of all, let me thank Professor Jacques Dreze, my thesis director. I am grateful to Jacques for encouragements, guidance and so many stimulating discussions. I also thank the members of the Jury, Professors A. Jacquemin, A. Kervyn de Lettenhove, A. Lamfalussy, P. Reding and A. Siaens for comments on earlier drafts of the manuscript. Discussions with Professor P. Howitt while he was visiting the Center for Operations Research and Econometrics (C.O.R.E., Universite Catholique de Louvain) in 1979 have greatly contributed to my understanding of the economics of risk sharing between lenders and borrowers. Philippe Gille has been extremely helpful in carrying out the joint econometric estimation in Chapter Five and in suggesting a fine way to present the results.

Financial Policies in Socialist Countries in Transition PHI Learning Pvt. Ltd.

This book was prompted by the current, lingering financial crisis, which has its basis in the disorderly financial practices of the United States. These practices have resulted in an accumulated debt which now requires the United States to run financial policies at artificially low interest rates. In principle, these low interest rates should flood the markets with ready money. Since the spread for banks is very thin, however, and they must carefully discriminate between available risks and finance only those propositions with no risk, credit is not abundantly available. With staggering foreign debt and a myriad of other perils looming, this great nation is at peril for sure. In the tradition of the Heilbronn Symposium, the authors look at historical cases as a means of understanding the current situation and informing possible solutions to a problem that continues to affect the global economy. The volume analyzes cases such as Prussia, Greece, Italy, Estonia, and the European Union. This book will be of interest to scholars and students of economic history as well as policy makers who may benefit from an historical understanding of the economic challenges their countries currently face.

The right turn in U. S. politics has increased conflict over both ends and means in government budgeting and financial management. Overlapping and competing views of the way the world works drive finance officials' practice. Taking a new look at public financial management that acknowledges the multiple, competing realities, *Government Budgeting and Financial Management in Practice: Logics to Make Sense of Ambiguity* examines transaction cost economics and other small government, managed-by-the-market techniques as the latest

reincarnation of public budgeting and financial management orthodoxy. Gerald J. Miller reviews new research on the continuing validity of the political dimension of government finance decisions and the multiple, intensely argued constructions of reality the finance official must make sense of. Miller discusses major advances in interpretive approaches to budgeting and finance and how they dominate writing in the broader field of public administration. He also examines the effects of the explosion of information systems, new budget techniques, nonconventional ways of spending, and new technologies. The book uses a question as the motivating force to understand some facets of today's government budgeting, finance, and financial management: where do the critical assumptions come from to drive financial management? Miller takes the history of reform, developments in the field and the logics finance officials say they use as sources for these assumptions and examines what they reveal about constructions of the government finance world. Exploring new avenues of financial management thinking, the book discusses ambiguity and interpretations that move the unclear preferences, ends, and goals toward consensus. The author identifies an alternative approach to research that explains important facets of financial management. This approach is drawn directly from practice, events and problems in public organizations and from the creedal bent of many political actors in competition.

Recognizing the important impact that a member's domestic economic and financial policies can have on systemic stability, Article IV of the IMF's Articles of Agreement establishes obligations for members respecting the conduct of these policies, including their financial sector policies. An examination of members' financial sector policies is important in all cases of bilateral surveillance, and three quarters of the Fund's membership has already undergone a financial stability assessment. With this Decision, the Fund decides that, taking into account the framework described above and the overall purpose of surveillance, heightened scrutiny should be given in bilateral surveillance to the financial sector policies of those members whose financial sectors are systemically important, given the risk that domestic and external instability in such countries will lead to particularly disruptive exchange rate movements and undermine systemic financial and economic stability. The mandatory financial stability assessments undertaken under this Decision will consist of the following elements: a) an evaluation of the source, probability, and potential impact of the main risks to macro-financial stability in the near-term for the relevant financial sector; b) an assessment of the authorities' financial stability policy framework; and c) an assessment of the authorities' capacity to manage and resolve a financial crisis should the risks materialize.
