Working at Warp Speed CRC Press
Success can make you slow Today's
managers waste an estimated 40
percent of their time on unnecessary
cooperation, communication and control.

Old-fashioned management skills are too expensive and slow to use in today's complex companies. When great companies grow they become more complex. This complexity starts to undermine what made the company successful: the organization slows down, it is more difficult to get things done and it becomes a less satisfying workplace. In his work with talented people from

hundreds of the world's leading companies. Kevan discovered that they spend over 80 percent of their time on cooperation, communication and control - and that up to 50 percent of that time is wasted. Organized around 4 Cs - Cooperation, Communication, Control and Community - Speed Lead distills the experience of more than 35,000 people in over 200 of the world's leading companies. The resulting radical view has enabled organizations to unravel the spaghetti of complexity, reduce project cycle times, build closer business relationships and curb the costs of unnecessary travel. Contrary to current leadership wisdom, Speed Lead advises to: celebrate the end of teams where you don't need them; abolish meetings of the bored; take control of the "crack-

berry" and don't be a 24-hour control freak; expect more from your people and lead a lot less; make "good-enough" decisions; and, don't let diversity be a diversion - share practices, not values.

Proceedings of the United States Naval Institute Routledge

This collection brings together the most interesting and outstanding papers from the Internet Research Conference held in Toronto in 2003. Taken individually, each paper makes an important contribution to the emerging field of Internet research, but the collection as a whole presents key perspectives on the most significant directions in the field. In particular, the papers discuss how we must now consider the relationship of Internet-based activities to those «offline», rather than concentrating

exclusively on the virtual. Papers advance important ideas and present research findings in relation to information theory, the Internet at home, theorizing time and the Internet, online activism, the digital divide, and more. This annual, the second in the series, demonstrates the vibrant and diverse nature of Internet scholarship fostered by the Association of Internet Researchers.

Field Programmable Logic and Applications Baker Academic
High-Speed Management and Organizational Communication in the 1990s provides a unique, systematic, and practical treatment of the role communication plays in the new organizations. It treats organizational integration, coordination, and control as

central communication processes and explores their transformation of traditional organizational topics such as leadership, corporate culture, teamwork, and continuous improvement programs. The central thesis of this analysis is that increasing the speed with which products get to market helps to make an organization more productive, develop better quality products, become more responsive to customer needs, and generate more profits for investors. Why and how this takes place as well as the central role communication plays in the process is treated here in detail.

How To Speed Up Your Computer ASM

International Computer Architecture: A Quantitative Approach, Fifth Edition, explores the ways that software and technology in the cloud are accessed by digital media, such as cell phones, computers, tablets, and other mobile devices. The book, which became a part of Intel's 2012 recommended reading list for developers, covers the revolution of mobile computing. It also highlights the two most important factors in architecture today: parallelism and memory hierarchy. This fully updated edition is comprised of six chapters that follow a consistent framework: explanation of the ideas in each chapter; a crosscutting issues section, which presents how the concepts covered in one chapter connect with those given in

other chapters; a putting it all together section that links these concepts by discussing how they are applied in real machine; and detailed examples of misunderstandings and architectural traps commonly encountered by developers and architects. Formulas for energy, static and dynamic power, integrated circuit costs, reliability, and availability are included. The book also covers virtual machines, SRAM and DRAM technologies, and new material on Flash memory. Other topics include the exploitation of instruction-level parallelism in high-performance processors, superscalar execution, dynamic scheduling and multithreading, vector architectures, multicore processors, and warehouse-scale computers (WSCs). There are updated

case studies and completely new exercises. Additional reference appendices are available online. This book will be a valuable reference for computer architects, programmers, application developers, compiler and system software developers, computer system designers and application developers. Part of Intel's 2012 Recommended Reading List for Developers Updated to cover the mobile computing revolution Emphasizes the two most important topics in architecture today: memory hierarchy and parallelism in all its forms. Develops common themes throughout each chapter: power, performance, cost, dependability, protection, programming models, and emerging trends ("What's Next") Includes three review appendices

in the printed text. Additional reference appendices are available online. Includes updated Case Studies and completely new exercises.

Tantalisingly Close Berrett-Koehler Publishers

This book covers the Air Traffic Management (ATM) environment and the controller-crew interactions. The International Civil Aviation Organization (ICAO) regulations and organizational procedures are also presented in a succinct manner so that novel and experienced aviation practitioners appreciate how safety organization affects their cognitive performance. The book distills theoretical knowledge about human cognition and presents real examples and case studies to help readers understand how air traffic

controllers make sense of difficult situations, make decisions under time pressure, detect and correct their errors, and adapt their performance to complex situations.

Communicating for Managerial Effectiveness Nicholas Brealey

The Communication Yearbook annuals publish diverse, state-of-the-discipline literature reviews that advance knowledge and understanding of communication systems, processes, and impacts across the discipline. Sponsored by the International Communication Association, each volume provides a forum for the exchange of interdisciplinary and internationally diverse scholarship relating to communication in its many forms. This volume re-issues the yearbook from

1983.

The ARRL Operating Manual for Radio Amateurs Routledge

Churches often realize they need to change. But if they're not careful, the way they change can hurt more than help. In this culmination of his well-received Ministry in a Secular Age trilogy, leading practical theologian Andrew Root offers a new paradigm for understanding the congregation in contemporary ministry. He articulates why congregations feel pressured by the speed of change in modern life and encourages an approach that doesn't fall into the negative traps of our secular age. Living in late modernity means our lives are constantly accelerated, and calls for change in the church often support this call to speed up. Root

asserts that the recent push toward innovation in churches has led to an acceleration of congregational life that strips the sacred out of time. Many congregations are simply unable to keep up, which leads to burnout and depression. When things move too fast, we feel alienated from life and the voice of a living God. The Congregation in a Secular Age calls congregations to reimagine what change is and how to live into this future, helping them move from relevance to resonance.

Communication Yearbook 7 Routledge

This book provides a comprehensive presentation of the most advanced research results and technological developments enabling understanding, qualifying and mitigating the soft errors effect in advanced electronics, including

the fundamental physical mechanisms of radiation induced soft errors, the various steps that lead to a system failure, the modelling and simulation of soft error at various levels (including physical, electrical, netlist, event driven, RTL, and system level modelling and simulation), hardware fault injection, accelerated radiation testing and natural environment testing, soft error oriented test structures, process-level, device-level, cell-level, circuit-level, architectural-level, software level and system level soft error mitigation techniques. The book contains a comprehensive presentation of most recent advances on understanding, qualifying and mitigating the soft error effect in advanced electronic systems, presented by academia and industry

experts in reliability, fault tolerance, EDA, processor, SoC and system design, and in particular, experts from industries that have faced the soft error impact in terms of product reliability and related business issues and were in the forefront of the countermeasures taken by these companies at multiple levels in order to mitigate the soft error effects at a cost acceptable for commercial products. In a fast moving field, where the impact on ground level electronics is very recent and its severity is steadily increasing at each new process node, impacting one after another various industry sectors (as an example, the Automotive Electronics Council comes to publish qualification requirements on soft errors), research and technology developments and industrial practices

have evolve very fast, outdating the most recent books edited at 2004.

A Treatise on Time and Space Frontiers Media SA

The author shows readers how to derail destructive patterns in the workplace by learning how to make and keep commitments, which provides a definitive key to successful project management in business and in life.

Original. 20,000 first printing.

Speeding Up the Drug Review Process, Results Encouraging, But Progress Slow
Springer Science & Business Media

This book constitutes the thoroughly refereed post-proceedings of the 4th International Conference on Parallel Processing and Applied Mathematics, PPAM 2002, held in Naleczow, Poland, in September 2001. The 101 papers

presented were carefully reviewed and improved during two rounds of reviewing and revision. The book offers topical sections on distributed and grid architectures, scheduling and load balancing, performance analysis and prediction, parallel non-numerical algorithms, parallel programming, tools and environments, parallel numerical algorithms, applications, and evolutionary computing and neural networks.

Routledge Library Editions: Philosophy of Time Springer

This book studies how Cricket has evolved in a post liberal India and how technology has affected the way it is viewed and spectated upon thereby altering the cultural and social milieu of the nation.

Theory and Practice of Distance Education Elsevier

This book constitutes the refereed proceedings of the 10th International Conference on Information and Communications Security, ICICS 2008, held in Birmingham, UK, in October 2008. The 27 revised full papers presented together with one invited paper were carefully reviewed and selected from 125 submissions. The papers are organized in topical sections on authentication, side channel analysis, cryptanalysis, access control, software security, system security, applied cryptography, and security protocols. *Mobility, Space, and Culture* Sterling Publishers Pvt. Ltd

Over the past 10 to 15 years there has emerged an increasing concern with

mobility in the social sciences and humanities. Here, Peter Merriman provides a contribution to the mobilities turn in the social sciences, encouraging academics to rethink the relationship between movement, embodied practices, space and place.

Advancing Collaborative Knowledge Environments: New Trends in E-Collaboration SAGE

The Communication Yearbook annuals originally published between 1977 and 2009 publish diverse, state-of-the-discipline literature reviews that advance knowledge and understanding of communication systems, processes, and impacts across the discipline. Topics dealt with include Communication as Process, Research Methodology in Communication, Communication Effects,

Taxonomy of Communication and European Communication Theory, Information Systems Division, Mass Communication Research, Mapping the Domain of Intercultural Communication, Public Relations, Feminist Scholarship, Communication Law and Policy, Visual Communication, Communication and Cross-Sex Friendships Across the Life Cycle, Television Programming and Sex Stereotyping, InterCultural Communication Training, Leadership and Relationships, Media Performance Assessment, Cognitive Approaches to Communication.

Federal Radio Commission... IGI Global Distance education is practised in all parts of the world and in recent years, its scope has developed enormously and rapidly. It has become an intrinsic part of

many national educational systems and an academic discipline in its own right. Research into the area has produced a body of theory which is now being used to improve its practice. This new edition of *Theory and Practice of Distance Education* has been thoroughly updated both by describing how practice has changed, and by examining recent research in the field. Like the first edition, this book provides a comprehensive survey of distance education, looking at it globally and discussing the different lines of thought and models used. It describes the place of distance education in educational thinking, its various theories, principles, and techniques of presentation, its organization and its administration.

Cognitive Engineering and Safety

Organization in Air Traffic Management
Oxford University Press

If you're an active ham radio operator, you probably have a story about your first radio contact. Many hams remember that experience even more than their first license examination.

Speeding Up Fast Capitalism

Routledge

Everywhere, life seems to be speeding up: we talk of “fast food” and “speed dating.” But what does the phenomenon of social acceleration really entail, and how new is it? While much has been written about our high-speed society in the popular media, serious academic analysis has lagged behind, and what literature there is comes more from Europe than from America. This collection of essays is a first step toward

exposing readers on this side of the Atlantic to the importance of this phenomenon and toward developing some preliminary conceptual categories for better understanding it. Among the major questions the volume addresses are these: Is acceleration occurring across all sectors of society and all dimensions of life, or is it affecting some more than others? Where is life not speeding up, and what results from this disparity? What are the fundamental causes of acceleration, as well as its consequences for everyday experience? How does it affect our political and legal institutions? How much speed can we tolerate? The volume tackles these questions in three sections. Part 1 offers a selection of astute early analyses of acceleration as experienced in the late

nineteenth and early twentieth centuries. Part 2 samples recent attempts at analyzing social acceleration, including translations of the work of leading European thinkers. Part 3 explores acceleration's political implications.

Communication Yearbooks Vols 6-33 Set
American Radio Relay League

This book contains the papers presented at the 13th International Workshop on Field Programmable Logic and Applications (FPL) held on September 1-3, 2003. The conference was hosted by the Institute for Systems and Computer Engineering-Research and Development of Lisbon (INESC-ID) and the Department of Electrical and Computer Engineering of the IST-Technical University of Lisbon, Portugal.

The FPL series of conferences was founded in 1991 at Oxford University (UK), and has been held annually since: in Oxford (3 times), Vienna, Prague, Darmstadt, London, Tallinn, Glasgow, Villach, Belfast and Montpellier. It brings together academic researchers, industrial experts, users and newcomers in an informal, welcoming atmosphere that encourages productive exchange of ideas and knowledge between delegates. Exciting advances in field programmable logic show no sign of slowing down. New grounds have been broken in architectures, design techniques, run-time - configuration, and applications of field programmable devices in several different areas. Many of these innovations are reported in this volume. The size of FPL conferences has grown

significantly over the years. FPL in 2002 saw 214 papers submitted, representing an increase of 83% when compared to the year before. The interest and support for FPL in the programmable logic community continued this year with 216 papers submitted. The technical program was assembled from 90 selected regular papers and 56 posters, resulting in this volume of proceedings. The program also included three invited plenary keynote presentations from LSI Logic, Xilinx and Cadence, and three industrial tutorials from Altera, Mentor Graphics and Dafca.

Peter Lang

"This book discusses the latest findings in knowledge-intensive, collaborative environments, focusing on frameworks and solutions for improving collaboration
