The book discusses how to tackle long-term social and ecological problems by using different environmental governance approaches to creating sustainable development. It explores opportunities and requirements for the governance of long-term problems, and examines how to achieve a lasting transformation. When investments are made to mitigate climate change or preserve biodiversity, future generations can reap benefits from the efforts of the present generation. However, long-term social-ecological change towards

sustainable development is disrupted by the fact that the costs and benefits of action are seen by different generations. With a global focus that includes case studies from Europe, Asia, Africa, and North America, this book attempts to address the difficulty of developing and implementing effective long-term governance solutions. The authors examine what distinguishes long-term problems from other policy problems, what governance responses are available and used, and how different governance mechanisms, namely economic incentives, participation, as well as knowledge and learning, help to address them. Combining the perspectives on the different governance approaches and featuring cases studies on national, regional and global issues,

Long-Term Governance for Social-Ecological Change will be of interest to policy-makers, students and scholars of global environmental governance, development, sustainability, politics, economics, law and sociology. *Agricultural Policies in Emerging and Transition Economies 1998 Monitoring and Evaluation* DIANE Publishing

Over the last two decades, many changes have happened to the social welfare policies of various industrial countries. Citizens have seen their pensions, unemployment benefits, and general healthcare policies shrink as “belt tightening” measures are enforced. But in contrast, long-term care has seen a general growth in public financing, an expansion of beneficiaries, and, more generally, an attempt to define larger

social responsibilities and related social rights. The aim of this book is to describe and interpret the changes introduced in long-term care policies in Western Europe. The volume argues that recent reforms have brought about an increasing convergence in LTC policies. Most of the new programs have developed a new general approach to long-term care, based on a better integration of social care and health care. The book explores increasing public support given to family care work (in the past, the family would take care of the elderly or infirm) and increasing growth and recognition of an extended social care market (by which care has shifted from a moral obligation based on family reciprocity to a paid, professional activity). A new social care arrangement

has therefore been developing in Western countries, based on a new mix of family obligations, market provision, and public support. In order to understand such changes, this analysis will take into account the social and economical impact of these reforms.

In a global economy, multinational companies often operate in jurisdictions where governments are either unable or unwilling to uphold even the basic human rights of their citizens. The expectation that companies respect human rights in their own operations

and in their business relationships is now a business reality that corporations need to respond to. *Business and Human Rights: From Principles to Practice* is the first comprehensive and interdisciplinary textbook that addresses these issues. It examines the regulatory framework that grounds the business and human rights debate and highlights the business and legal challenges faced by companies and stakeholders in improving respect for human rights, exploring such topics as: the regulatory framework that grounds the business and human rights debate, challenges faced by companies and stakeholders in improving human rights, industry-specific human rights standards, current mechanisms to hold corporations to account, future challenges for business and human

rights. With supporting case studies throughout, this text provides an overview of current themes in the field and guidance on practical implementation, demonstrating that a thorough understanding of the human rights challenges faced by business is now vital in any business context.

Technological innovation is essential to the future well-being of the United States. The ability of the nation to sustain economic growth, increase its standard of living, and improve human health and the environment depends, in many ways, on its success in developing and commercializing new products, processes, and services. The growing capabilities of competitors in Europe, Asia, and elsewhere around the world increasingly challenge the ability of U.S. firms to convert the nation's science and

technology base into a competitive advantage. Such concerns have prompted much debate about the proper role of government in encouraging innovation and the commercialization of new technologies. To date, however, the debate has been hampered by an incomplete understanding of the ways in which firms develop and market new products, processes, and services and the barriers they must overcome in the process.

Living Standards Measurement Studies Paper 104. The impact of children's health on their schooling success has been the focus of much research. While studies have concluded that there is a correlation between the health of the

children and their performance at school, there is an increasing argument surrounding the limitations of the research. Many such studies measure schooling achievement through school attendance rates. This paper analyzes the failure of research to control for the fact that schooling and health are determined simultaneously. Such failure would lead to biased estimates. The study explores the possible biases and provides new evidence on the interrelationship between child health and schooling.

The book gives an overview of important research topics recently addressed in evolutionary Neo-Schumpeterian Economics. The list of research

questions and applications of Neo-Schumpeterian reasoning impressively demonstrates the rich possibilities ranging from theoretical issues addressing human behaviour to applied areas like the emergence of biotechnology in developing countries, the role of innovation on financial markets and the R&D strategies of multinational enterprises. The chapters in this book bring together a rich set of new analytical and empirical methodologies which allow for new relevant and rigorous insights in innovation processes which are responsible for economic development and structural change.

Deepening Reform for China's Long-term Growth and Development Cambridge University Press

The Chinese economy has entered a new phase of development in which sources of growth are not so much dependent upon pure increases in labour, investment and credit expansion, but from productivity improvement, structural changes, technological progress and the benefits from improvement of the social security and welfare improvement. When market functions are fully established to become

a main channel for allocating resources, the entrepreneurship will flourish engaging in more innovative activities, workers will move more freely and have more incentives to improve their skills, firms will become more productive through market entry and exit, the economic structure will become more balanced because of the improved resource allocation, and in the end, growth will become more spontaneous and sustainable. In this sense, reforms could deliver 'dividend' by raising China's potential economic growth rates. For China to confront all the challenges it faces at present, the reforms undertaken now have to be deep, comprehensive and far-reaching in order to succeed in paving the way for China to complete the task of transformation in the long-

term. There is no better alternative than deepening the market-oriented reform in advancing the course of China's modernisation for future development and prosperity and lifting China to the status of a developed economy in the next two decades. The recent China update books have covered the topic of reform from different angles and this new book is another attempt to address this important issue.

The rapidly changing market environment in China requires more research to understand fully the empirical processes of management practice and the business landscape in which they operate. Based on longitudinal case study research between 2005 and 2010, this book

explores the distinctive characteristics of emerging forms of economic enterprise under market socialism in China.

Adopting a holistic view, it explores how rapid environmental and institutional changes in economic reforms are impacting upon their practice, and assesses the role of government policy in shaping their ownership and management processes. Through the changing patterns in the development of business ventures, it outlines the dynamics of industrial and organizational change under the transitional phases of a market socialist economy, and explores the tensions which emerge. This comparative perspective will be of interest to academics, researchers and advanced students of business growth and enterprise management, particularly

those wishing to explore China, Chinese business and emerging economies.

When Genius Failed John Wiley & Sons
First published in 1989, *Combating Long-Term Unemployment* follows on from, and is a companion to, *Local Authorities and New Technologies*. The book seeks to inform debate by analysing policy responses to the problem of long-term unemployment and by focusing on the role of local initiatives in a European context. Long-term unemployment in Europe is a complicated and multifaceted problem, the policy responses to which need to be studied against various contexts. It is designed to appeal to all those interested in policies to combat long-term unemployment: local and central government officials, private sector

organizations whose work is relevant to locally based initiatives, and interested academics.

Studies in Business Policy John Wiley & Sons

The last two decades have witnessed the growth of new forms of entrepreneurial cooperation such as dynamic networks like virtual enterprises and enterprise pools. These business forms are often hybrid, having elements of both contract-based organizations and corporate forms, in particular partnership. This book examines the relative utility of contract and partnership law in fostering and maintaining these emerging business models, focusing on dynamic networks. The book analyses how dynamic networks are organized and set up

through, very often, collaborative contracts and how the behaviour of their member firms is regulated. Good faith and fair dealing as a behavioural criterion in contractual and partnership relations, is an important theme of this work. The background and preconditions for the emergence and growth of such business forms is also investigated. The book contains case studies of such networks from different countries in particular Germany, Austria, Switzerland, England and Norway. It examines relevant legal rules in a number of jurisdictions such as England, Norway, Germany, Italy, France and the US. This detailed book will appeal to postgraduate students and academics in the fields of contract law, comparative law, partnership law and

business/commercial law. Academics in other disciplines such as economics, sociology and business management will also find much to interest them in this study.

Investment Incentives and Capital Costs Taylor & Francis

Sovereign wealth funds (SWFs) are state-owned investment funds with combined asset holdings that are fast approaching four trillion dollars. Recently emerging as a major force in global financial markets, SWFs have other distinctive features besides their state-owned status: they are mainly located in developing countries and are intimately tied to energy and commodities exports, and they carry virtually no liabilities and have little redemption risk, which allows them to take a longer-term investment

outlook than most other institutional investors. Edited by a Nobel laureate, a respected academic at the Columbia Business School, and a longtime international banker and asset manager, this volume examines the specificities of SWFs in greater detail and discusses the implications of their growing presence for the world economy. Based on essays delivered in 2011 at a major conference on SWFs held at Columbia University, this volume discusses the objectives and performance of SWFs, as well as their benchmarks and governance. What are the opportunities for SWFs as long-term investments? How do they fulfill their socially responsible mission? And what role can SWFs play in fostering sustainable development and greater global financial stability? These are some

of the crucial questions addressed in this one-of-a-kind volume.

Reforms in Long-Term Care Policies in Europe Routledge

Countries are facing increasing life expectancy and a shrinking family size and in effect, this may escalate demands for medical and supportive services. The role of families in providing informal care will remain important. However, the simultaneous decline in the supply of informal caregiving caused by changes in family structure and higher female labour-market participation necessitate the expansion of the public role in care provision. This book analyses the challenges of long-term care (LTC) policy development and implications from

advanced LTC systems and a current trajectory in emerging economies in Asia. The book approaches the subject through comparative analysis on what works and what does not to provide insight into public policy options for sustainable LTC provision and financing mechanisms. How the countries adopt different approaches to health and social systems towards LTC development could provide important insight and perspectives into policy options in the region. This book aims at academics, policymakers and practitioners in health, social, and aged care services and could also be used as a teaching resource for undergraduate students in health and social sciences and postgraduate programs in public health, epidemiology, social demography, gerontology, and

nursing. The book will be of interest to a wider audience not only on social and

health consequences of population ageing but also health and social policy relating to older persons.
