Forget the 10,000 hour rule— what if it's possible to learn the basics of any new skill in 20 hours or less? Take a moment to consider how many things you want to learn to do. What's on your list? What's holding you back from getting started? Are you worried about the time and effort it takes to acquire new skills—time you don't have and effort you can't spare? Research suggests it takes 10,000 hours to develop a new skill. In this nonstop world when will you ever find that much time and energy? To make matters worse, the early hours of practicing something new are always the most frustrating. That's why it's difficult to learn how to speak a new language, play an instrument, hit a golf ball, or shoot great photos. It's so much easier to watch TV or surf the web . . . In The First

20 Hours, Josh Kaufman offers a systematic approach to rapid skill acquisition— how to learn any new skill as quickly as possible. His method shows you how to deconstruct complex skills, maximize productive practice, and remove common learning barriers. By completing just 20 hours of focused, deliberate practice you'll go from knowing absolutely nothing to performing noticeably well. Kaufman personally field-tested the methods in this book. You'll have a front row seat as he develops a personal yoga practice, writes his own web-based computer programs, teaches himself to touch type on a nonstandard keyboard, explores the oldest and most complex board game in history, picks up the ukulele, and learns how to windsurf. Here are a few of the simple techniques he teaches: Define your target performance level: Figure out what your desired level of skill looks like, what you're trying to achieve, and what you'll be able to do when you're done. The more specific, the better. Deconstruct the skill: Most of the things we think of as skills are actually bundles of smaller subskills. If you break down the subcomponents, it's easier to figure out which ones are most important and practice those first. Eliminate barriers to practice: Removing common distractions and unnecessary effort makes it much easier to sit down and focus on deliberate practice. Create fast feedback loops: Getting accurate, real-time information about how well you're performing during practice makes it much easier to improve. Whether you want to paint a portrait, launch a start-up, fly an airplane, or juggle flaming chainsaws, *The First 20 Hours* will help you pick up the basics of any skill in record time . . . and have more fun along the way.

How I've Really Learned Programming? Here are the things you should keep in mind while learning to program: 1. You'll fail more often than not, don't take it too seriously. Everybody fails when they try something new. It's not something that one should have to tell you, but I'll say it anyway. 2. Practice is more important than reading books and taking courses. There are several great courses for starters on [coursera.org](#) about programming for beginners that, I believe, you should begin with. What is more important than study material is practice material and assignments. Trust me, you will never become a good programmer by reading more. You need to start writing code. 3. Solving problems is more than just hitting keys on your keyboard. Often we see in movies how programmers are given a problem and they immediately start typing things down. In real world, it doesn't work this way. It's almost always a good idea to try to solve a problem first on paper and then start writing code. 4. Getting the basics of programming and aptitude to make logic is more important than choice of language. Although I'm one of those people who are a bit choosy about a programming language, but that's a trait you should defer acquiring. Now to answer another question that you asked -- whether you should learn to code first or understand algorithms and data structures. I suggest that you get in the habit of writing basic code in any language, then start studying algorithms and data structures. Once you know a bit of programming you can study algorithms and keep improving on your programming skills. A program is a set of instructions written in a language (such as BASIC) understandable by the computer to perform a particular function on the computer. A well written program could be parceled well to form an application package customized for solving specific type of problem on the computer system. A computer programmer is computer scientist (a professional) skilled in using constructs of programming languages to develop executable and acceptable computer programs. A software developer is a programmer. Programmers often work hand in hand with system analysts on large projects. Programming languages are artificial notational languages created or developed to be used in preparing coded instructions on the computer for later execution by the computer. They are usually composed of series of usage rules (syntax) that determine the meaning (semantics) of expressions written in the language. Each programming language comes handy with its own translator i.e interpreter or compiler as the case may be. Programming is the art of developing computer programs with the aid of selected programming language by a computer programmer. It is a special skill whose quality is tested by the quality of the resulting program or software. In programming, programming stages must be properly followed, i.e from problem definition to maintenance and review I am constantly asked the following: "Which programming language should I learn if I'm new?" "Which programming language is most in-demand for jobs?" "What's the most popular programming language?" .....

The book is based on a true story on how a father, Athur Kingoina, mistreats his youngest son, Maxwell Ratemo who had just graduated from Nairobi University with a B.Com degree. His father occasionally, receives some money from his other three children who are studying in the US and thinks that the one at home should have a job and may be, be in a position of giving him money too. His girlfriend, Rosalina, is not kind either. She jilts him for another man whom he meets with her at Uhuru Park enjoying their time. The good thing was that he didn't confront them. This tough life makes him to run away from home to even a tougher life of being a street boy in Nakuru town after searching for a job in vain. A road accident one evening which nearly took his life, changed everything. When all these events were happening in the life of Ratemo, politicians were campaigning in preparation for the general elections which was scheduled to take place at the end of the year; Dec.27.2007. When the time reached and the electorates cast their votes, chaos erupted after the tallying had been done and the incumbent president was declared the winner. The results were disputed which sparked the violence. A great destruction was done to both human lives and properties. Business operations were disrupted for two months. This impacted negatively to jobs, especially into those foreign companies which had ventured to do business in the country. The majority of them, wound up their business ventures and re-located to other countries which were politically stable. Ratemo's company, DIMA investment was no exception. After the lull of the big storm of violence, the company found that it had made unsurmountable loss, it laid off almost all the workers and later on wound its business rendering many employees jobless.

Romanticism was always culturally diverse. Though English-language anthologies have previously tended to see Romanticism as predominantly British, the term itself actually originated in Germany, where it became the banner of a Europe-wide movement involving the profound intellectual and aesthetic changes which we now associate with modernity. This anthology is the first to place British Romanticism within a comprehensive and multi-lingual European context, showing how ideas and writers interconnected across national and linguistic boundaries. By reprinting everything in the original languages, together with an English translation of all non-English material in parallel on the opposite page, it offers a new intellectual map of Romanticism. Material is thematically arranged as

follows: - Art & Aesthetics - The Self - History - Language - Hermeneutics & Theology - Nature - The Exotic - Science While focusing on European texts, the inclusion of essays on their North American and Japanese reception means that Romanticism can be seen as a global phenomenon, influencing a surprising number of the ways in which the modern world sees itself.

You want to start your own business online, but confused about where to go or where to begin. Obviously, you need to keep in mind that any business, whether online or not, will require time and resources, therefore, you are not ready yet, until you put these two in place. This does not mean you have to spend too much just to start your own business online, as a matter of fact, it costs nothing to sign up and start making money on Amazon, EBay and Alibaba, as long as you have something to sell, promote or service to render. Secondly, you don't have to sell anything to make money on Amazon EBay or Alibaba, you can also make money by promoting existing products, through your Affiliate marketing and referral links. You probably have a regular job that takes most of your time, thus time may be something you rarely have, but the good news is that, you don't have to spend several hours online before you can start making money (even 1-2 hour a day should be enough, if you know what you are doing and you have a great medium where you can easily connect with your potential clients). If you have enough time in your hands, you can decide to sell your own goods on Amazon, EBay and Alibaba. In this situation, you need to know how much time you need to search or get supplies of your products, package them, and ship them. Likewise, you need to keep in mind those shipping fees you will incur alongside other handling charges. However, if you don't have much time to export or ship goods online, you can just find products to promote and sell. In this case, you need to know what products to search for and how to create a huge followership that can be converted into repeated sales, for the products. You need to do quite a number of researches before you decide which product to sell, because there are lots of junks out there that may never generate a single dollar. You need to also keep in mind that ecommerce websites such as Amazon, EBay and Alibaba and always in favour of customers, therefore any complaint from them means you will lose your rating and possibly the opportunity of making money on a deal. Subsequent chapters will highlight some of the things you need to do to avoid losses and maintain steady streams of income on the three largest online Ecommerce websites. Likewise, the next chapter gives you incredible figures that should lure you into starting your own business on Amazon, EBay, and Alibaba.
