**2021 Nurse's Drug Handbook** Jones & Bartlett Learning

The 2021 Lippincott Pocket Drug Guide for Nurses provides current, vital drug information “in a nutshell.” This handy pocket guide by Rebecca Tucker gives essential information on over 4,100 medications, including 48 generic drugs newly approved by the FDA, in an easy-access A-to-Z format. The “mini” drug

monographs include generic and trade names, drug classes, pregnancy risk category and controlled substance schedule, “black box” warnings, indications & dosages, dose adjustments, adverse effects, drug interactions, nursing considerations, and patient teaching. A special section following the A-to-Z drugs provides essential Patient Safety information. Appendices cover topical and ophthalmic medications, laxatives, combination products, contraceptives, biological agents (vaccines), and more.

Over 1,000 generic name drugs, encompassing over 4,000 trade name drugs, are organized alphabetically with A-to-Z tabs for quick and easy access. Detailed information for each drug distinguishes side effects and adverse reactions to help you identify which are

most likely to occur. Highlighting of high-alert drugs helps promote safe administration of drugs that pose the greatest risk for patient harm; an appendix includes drug names that sound alike or look alike. UNIQUE! Herbal information is included in the appendix and on the Evolve companion website, covering the interactions and effects of commonly encountered herbs. Classifications section features an overview of actions and uses for drug families. Top 100 Drugs list helps you easily identify the most frequently administered drugs. Nursing considerations are organized in a functional nursing process framework and include headings for baseline assessment, intervention/evaluation, and patient/family teaching. Information on

lifespan and disorder-related dosage variations equips you with special considerations for pediatric, geriatric, hepatic, and immune- or renal-compromised patients. Extensive IV content features IV compatibilities/IV incompatibilities and breaks down key information with headings on reconstitution, rate of administration, and storage. Fixed combinations are included in dosages of each combined drug directly within the individual monographs, to help you understand different drug dose options for specific diseases. Cross-references to the 400 top U.S. brand-name drugs are located throughout the book for easy access. Customizable and printable monographs for 100 of the most commonly used drugs are located on Evolve, along with

quarterly drug updates. Therapeutic and toxic blood level information promotes safe drug administration.

Comprehensive IV Compatibility Chart foldout arms you with compatibility information for 65 intravenous drugs.

List of newly approved drugs in the front of the book makes it easy to locate the latest drugs. Callouts in a sample drug monograph highlight key features to help you understand how to use the book more efficiently.

Offering essential, evidence-based practice guidelines specifically for the critical care setting, ICU Quick Drug Guide contains up-to-date information in a quick-access format. This portable handbook provides fast, accurate drug

therapy information needed at the point of care, including expert advice throughout to help clinicians determine optimal pharmacological therapy. Offers a quick summary of current clinical guidelines to experienced clinicians while providing a simplified, focused guide to all entry level clinicians. Covers the wide variety of issues seen in the ICU, including sepsis and septic shock, venous thromboembolism, acute heart failure, anaphylaxis, arrhythmias, asthma and COPD, pain, infections, pancreatitis and liver failure, stroke, and many more. Begins each topic with a brief discussion of the disease state followed by drug tables that compare and contrast different treatment regimens, including pharmacokinetics, pharmacodynamics, drug interactions,

contraindications, and hepatic/renal dosing. Contains clinical pearls organized by the top disease states seen in the critical/acute care setting.

Provides practical and essential drug information from Dr. Jennifer Pai Lee, a clinical pharmacist with expertise in critical care and pharmacokinetics/pharmacodynamics.

Sadly, women often feel they have no alternative but to give up breastfeeding, having been prescribed or purchased medication. In many cases, however, this is unnecessary. This book outlines the evidence base for the use of medication during breastfeeding. *Breastfeeding and Medication* presents a comprehensive A to Z guide to the most frequently prescribed drugs and their safety for breastfeeding mothers. Evaluating the evidence for interventions and using a simple format for quickly identifying medications that are safe or unsafe to use, it also highlights those drugs where there is inconclusive evidence. Additional contextual information makes this the most complete text for those practitioners

who support and treat breastfeeding women. It: provides an overview of the anatomy and physiology of the breast together with hormonal influences to better understand how complications, such as mastitis, arise and inform the approach to their treatment; includes a section on conditions that affect women specifically when they are lactating where prescription of medication may be necessary; discusses the importance of breastfeeding and its advantages, as well as its disadvantages; and explores how to support breastfeeding mothers, and presents a counselling model approach. This new edition contains information on more drugs and a chapter on the management of some chronic conditions which may affect breastfeeding mothers. In most cases

there are options to support the mother's optimal care whilst allowing her to continue to breastfeed her baby as long as she wishes. This is a topic which raises many questions on social media, which informed the choice of conditions to consider. This is an invaluable reference for all health practitioners and volunteers who work with, support and treat breastfeeding women, including lactation consultants, breastfeeding support workers, health visitors, GPs, practice nurses, pharmacists and midwives.
