The Fourth Edition of Firefighting Strategies and Tactics meets

and exceeds the course outcomes of the National Fire Academy's

Fire and Emergency Services Higher Education (FESHE) course

Strategy and Tactics (C0279). Firefighting Strategies and Tactics,

Fourth Edition is a valuable resource for fire fighters studying for promotion or taking civil service examinations. The Fourth Edition reinforces safe and effective firefighting strategies and tactics for fire fighters and fire officers to employ during a wide spectrum of fire incidents. The chapters follow a natural progression, each chapter building on the previous foundation to provide a broad understanding of firefighting strategy and tactics. Firefighting Strategies and Tactics, Fourth Edition offers in-depth coverage of potential incident hazards, strategic goals, and tactical objectives at: One- and two-family dwellings Multiple-family dwellings Commercial buildings Places of assembly High-rise buildings Vehicle fires Wildland fires The Fourth Edition also includes: An Emphasis on Safety—Safety and professionalism are stressed throughout the chapters and are reinforced through discussions of incident effectiveness, hazard awareness, and strategic decision-making. Information for Today’s Fire Service—Expanded and new discussions on geographic information system (GIS mapping), drone use for creating preincident plans, cancer risks in the fire service, gross decontamination of bunker gear after fires to reduce carcinogens, lookouts-communications-escape routes and safety zones (LCES), and deployment of rapid intervention crews at wildland fires. Engaging Case Studies—Opening each chapter, case studies highlight actual events to emphasize the importance of developing sound strategies and tactics to fight fires effectively and safely. Additional case studies close out each chapter and provide students an opportunity to test their understanding in a safe environment. Knowledge in Action—The final chapter demonstrates how the strategies and tactics throughout this

resource may be applied in scenarios set at various types of occupancies. This feature offers students an opportunity to see how concepts are applied in the real world.

Cal/OSHA Pocket Guide for the Construction Industry

The Cal/OSHA Pocket Guide for the Construction Industry is a handy guide for workers, employers, supervisors, and safety personnel. This latest 2011 edition is a quick field reference that summarizes selected safety standards from the California Code of

Regulations. The major subject headings are alphabetized and cross-referenced within the text, and it has a detailed index. Spiral bound, 8.5 x 5.5"

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

Plan of Instruction for Managing Floodplain Development Through the National Flood Insurance Program

Few detailed studies that involve complex interactions of social, economic, and technical factors have much direct and immediate impact on the real world. This study could well be one of those few exceptions. Arthur Bernhardt, an internationally known building industry expert, recognized as the leading authority on the mobile home industry, has compiled in this book overwhelming evidence that applying the efficient methods and techniques of that industry to other, older sectors of the building industry will enable the United States and countries around the world to overcome the housing crisis, making it possible to divert some of the expenditures for public subsidization of housing to other social priorities. Far from advocating an endless sprawl of mobile home parks as the basis for tomorrow's housing, Bernhardt states at the outset that "as the housing crisis continues to worsen, many people are asking whether mobile homes might become a viable housing alternative.... My personal answer is 'I hope not!'" Rather, his goal is to transfer the innovative spirit and built-in efficiencies of the mobile home production and delivery system to a full range of housing

configurations. Bernhardt reached this conclusion only after overcoming an initial skepticism—he originally shared a widespread negative predisposition toward the mobile home industry: "This basic conclusion is the exact opposite of what I expected to find when I first looked at the mobile home industry years ago. Then, sharing with many others in the United States a strong bias against this industry, I decided to devote a few weeks to writing a negative case study on 'how notto industrialize the building industry.' One of the first findings of this investigation, however, was startling: The mobile home industry is the most efficient building industry in the world." The author then undertook a full-scale study of all aspects of the industry, in a seven-year project at MIT. He built a staff of more than a hundred professionals in such fields as engineering, economics, finance, law, management, political science, and sociology, scattered throughout the country. Supported by the U.S. Department of Housing and Urban Development (HUD), Bernhardt and his staff conducted thousands of surveys and interviews in all sectors of the building industry and at all levels of government. The results of this research were compiled in a massive, five-volume, 5000 page report to HUD. Bernhardt's up-to-the-minute book—which is richly illustrated with halftones and drawings—condenses that report, and sets forth in a vigorous and explicit way the conclusions and recommendations that the full weight of the evidence compels.
