This book will further stimulate interest and

discussion of the telephone and the Internet as a mode of treatment. In this extensively revised third edition, a practical framework for providing immediate problem-solving assistance by telephone to persons in crisis is provided. Several new chapters have been added and several chapters have been updated and rewritten. The text offers specific techniques to deal with out-of-control situations with the highly important initial steps to protect the caller, the crisis worker, and the community. The scope of the book includes an overview of counseling by telephone, how to effectively manage crises, how to be supportive verbally and

nonverbally, how to accurately assess situations, and how to help create a sense of stability. Part I discusses the varieties of telephone services, while Part II covers crisis intervention and counseling, including telephone therapy, active listening, cognitive therapy approaches, transactional analysis and learned helplessness approaches, as well as Gestalt therapy approaches. Part III discusses a variety of problem callers: the obscene caller, the chronic caller, the silent caller, the nuisance caller, and the “one counselor” caller. A new section, Part IV—Special Topics, includes valuable information on dealing with adolescents, war

veterans, rural communities, the elderly, and individuals with disabilities on campus. Part V offers a look at contact beyond the telephone, including crisis intervention by e-mail and letter. Part VI views the roles of telephone counselors, such as the mental health professional, the nonprofessional crisis worker, selecting telephone counselors, and training crisis workers. Finally, Part VII summarizes and evaluates today’s telephone counseling services. This unique and up-to-date book serves as a comprehensive tool for those setting up telephone and Internet counseling services and those in charge of centers already operating, especially in

training and supervising those on the front lines, the crisis interveners. *Principles and Practice of Geriatric Surgery* Springer Science & Business Media

Recent developments in basic and applied science have led to better understanding of disease mechanisms and more efficient therapies for multiple sclerosis. The most effective way of managing these patients is through a carefully planned neurorehabilitation programme. The main aims are to reduce disability and handicap and improve functions through effective training, stimulating activity and social participation. As the first text on recovery of function and neurorehabilitation in

MS, this book focuses on mechanisms of recovery, application of neuroplasticity to therapeutic interventions, and determination of the efficiency of these interventions. Basic principles of neurorehabilitation in MS are described, as well as techniques for treating specific syndromes which may occur in MS. Written and edited by leading clinicians and researchers, the book achieves an excellent balance between basic science, pathophysiology, and clinical rehabilitation. An essential resource for clinicians and therapists treating patients with multiple sclerosis, neurophysiologists, and health care advisors.

Essentials of Surgical

Reinhardt Verlag

"In the preface to this impressive and well-produced book, the editors state that their aim is not to describe a new surgical specialty, since most surgeons will soon need to be "geriatric surgeons," but to assemble a comprehensive account that will allow "all providers of healthcare to the elderly to understand the issues involved in choosing surgery as a treatment option for their patients." This is a useful book that deserves to do well. I hope that the editors and their publisher will have the stamina to make this the first of several editions, as it is clear that updated information about surgery in the elderly will be required to keep

pace with this important field." NEJM Book Review

In music, people can make themselves heard, even if they cannot communicate verbally or words have long lost their meaning. Music (therapy) helps people find a way out of their

isolation, find pleasure in making music together, or enjoy soothing sounds in an individual therapy setting. Its individualized design makes it adaptable for a wide range of moods that older people experience in everyday life, and can help in difficult situations. Creative work in music therapy is always professionally grounded - subtly, playfully, or expressively, and is used to underscore mood. This book describes music therapy objectives and methods for older people. It provides many tips for specific sequences of interventions, for using instruments, choice of music, and related discussion topics.
Drug Therapy for the

Elderly Oxford University Press, USA
 With people aged 65 years and older currently making up the fastest growing age group throughout the world, the demographic revolution of an aging society will inevitably lead to increased pressure to develop a rationalistic and age-tailored process of diagnosis and treatment among the elderly. As aging people often suffer from several chronic diseases and are being treated with multiple medications concurrently, unwanted drug interactions occur more frequently. Whereas recent approaches have recommended to remove particular drugs from the

medication regimen to avoid adverse effects, *Drug Therapy for the Elderly* underlines both indispensable and dispensable elements of drug treatment in order to provide an overall assessment of drugs suitable for the aged. In view of the multimorbidity and polypharmacy situations experienced by elderly patients, this book takes into account the special needs and requirements shown by this group, thus serving as a timely reference for physicians who treat the elderly.

A look inside the historic mental hospital that served as the location for *One Flew Over the Cuckoo's*

Nest—includes photos. Seen through the eyes of those who lived there, this book examines the world of a mental hospital established in Salem, Oregon, in 1883—where, in desperate attempts to cure their patients, physicians injected them with deadly medications, cut holes in their heads, and sterilized them. Years of insufficient funding caused the hospital to decay into a crumbling, understaffed facility, which was later used as the setting for the 1975 film *One Flew Over the Cuckoo's Nest*. Today, after a \$360 million makeover, Oregon State Hospital is a modern treatment hospital for the state's civil and forensic mentally ill. In this compelling account of

the institution's tragedies and triumphs, author Diane Goeres-Gardner offers an unparalleled look at the very human story of Oregon's historic asylum.

"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need to know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson

Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)." - online AHRQ blurb, <http://www.ahrq.gov/qual/nursesfdbk/>
Trends in Long-term Care Psychology Press
 China, which is fast on its way to becoming the most powerful economic force in the world, has four unique characteristics that distinguish it from other countries in Asia: (1) The proportion of aging population is growing faster than that of Japan (the country previously recognized as having the fastest rate) and

much faster than nations in western Europe. (2) An early arrival of an aging population before modernization has fully taken place, with social policy implications. It is certain that China will face a severely aged population before it has sufficient time and resources to establish an adequate social security and service system for older people. (3) There will be fluctuations in the total dependency ratio. The Chinese government estimates are that the country will reach a higher dependent burden earlier in the twenty-first century than was previously forecast. (4) The government's fertility policy (single child per family) and its implementation has a strong influence on the

aging process. Fewer children are being born, but with more elderly people a conflict arises between the objectives to limit population increase and yet maintain a balanced age structure (Peng and Guo 2001). The intersection of these fourfold factors means that the increased aging population is giving rise to serious concerns among Chinese social policy makers. There is a chronic lack of good resource materials that attempt to make sense of social policy in its relationship to examining the problems and possibilities of human aging grounded in an analysis of economic of social policy in China and impact on rural and urban spaces.

Such analysis of China will be covered by conceptual, theoretical, and empirical approaches. The book will also discuss substantive topics of housing, community care, family care, pensions, and mental health. The book brings together a truly world class array of researchers to provide discussions of critical implications of aging social policy and the economic impact in China.

Reorganized into a single, tightly focused volume, the new edition of Geriatric Medicine offers practical, authoritative, and comprehensive coverage of the diseases, common problems, and medical

care of older persons. The thorough revision includes new chapters on "Urinary Incontinence" and "Falls" as well as expanded discussions of rheumatic/orthopedic disorders and neuropsychological testing. Particularly noteworthy is the superb chapter on "Dementia"; written by a neurologist and a psychiatrist, it provides a remarkably complete account of the dementing disorders. The book also reviews central issues in health care systems and policies, including the unique legal aspects of caring for older persons and the rising importance of home care.

East Asian nations shared a similar environment of modernisation in the nineteenth and early twentieth centuries. None had been colonised under Western imperialism, but all of them commonly became subjected to new authorities, whether directly or indirectly. This change of the political landscape also challenged religious communities, as many new religious movements (NRMs) emerged to satisfy the spiritual needs of local

people in overcoming the hardship of transition. This book presents the unique case of a native Korean NRM which successfully survived, transformed, and was transmitted even into contemporary society. Among Donghak (later called Cheondogyo), Daejonggyo, and Wonbulgyo, the history of Daesoon Jinrihoe derived from the Jeungsan movement is explored here in the context of functionalism, even though the perspectives of

religious philosophy and personal experiences are also regarded for the receptive and syncretic relationship with other groups. The book offers significant insight that conservative nationalistic NRMs can still survive in a digital era, rather than disappear after the death of their founders. [China's Emerging Cities](#)
