This volume provides the first comprehensive investigation of the Netherlands in the World Englishes paradigm. It explores the history of English contact, the present spread of English and attitudes towards English in the Netherlands. It describes the development and analysis of the Corpus of Dutch English, the first Expanding Circle corpus based on the design of the International Corpus of English. In addition, it investigates the applicability of Schneider's (2003, 2007) Dynamic Model, concluding that this and other such models need to move away from a colonisation-driven approach and towards a globalisation-driven one to explain the continued spread and evolution of English today. The volume will be highly relevant to researchers interested in the status and use of English in the Netherlands. More broadly, it provides a timely contribution to the debate on the relevance of the World Englishes framework for non-native, non-postcolonial settings such as Continental Europe.

More than 22 million people speak Dutch-primarily in the Netherlands, Belgium, Suriname, and the Antilles. Roland Willemyns here offers a well-researched and highly readable survey of the Dutch language in all its historical, geographic, and social aspects. Willemyns tells a story of language contact and conflict. From its earliest days, Dutch has been in intense contact with other languages both within and outside the borders of the Low Countries, particularly with French, Frisian, and German. The first part of Dutch concentrates on the historical development of standard Dutch and its dialects. The second part focuses on contemporary Dutch, including its many dialects in Flanders and Holland (some of them on the verge of extinction). Willemyns pays special attention to important questions in the history of Dutch, particularly the contentious matter of the global spread of Dutch through colonization-which led to "exotic" variations such as Afrikaans, pidgins, and creoles-and whether Dutchmen and Flemings are "separated by the same language." His final chapter tries to shed some light on the future of Dutch, and the impact of such "new" varieties as Poldernederlands (in Holland) and Verkavelingsvlaams (in Flanders). Placing the Dutch story in the context of other West-Germanic languages like German and English, Dutch: Biography of a Language is the only English language history of Dutch and will be sure to interest a global audience of students of Dutch, those of Dutch descent, and linguists and other scholars wishing to learn more about Dutch.

**Spanish as a Heritage Language in the Netherlands** Language Science Press

The decades around 1800 constitute the seminal period of European nationalism. The linguistic corollary of this was the rise of standard language ideology, from Finland to Spain, and from Iceland to the Habsburg Empire. Amidst these international events, the case of Dutch in the Netherlands offers a unique example. After the rise of the ideology from the 1750s onwards, the new discourse of one language-one nation was swiftly transformed into concrete top-down policies aimed at the dissemination of the newly devised standard language across the entire population of the newly established Dutch nation-state. Thus, the Dutch case offers an exciting perspective on the concomitant rise of cultural nationalism, national language planning and standard language ideology. This study offers a comprehensive yet detailed analysis of these phenomena by focussing on the ideology underpinning the new language policy, the institutionalisation of this ideology in metalinguistic discourse, the implementation of the policy in education, and the effects of the policy on actual language use.

The FoLLI LNAI subline aims to disseminate cutting-edge results in logic, language and information (LLI) research, development and education. LLI is the topical focus of FoLLI, the Association of Logic, Language and Information ([www.folli.org](#)). FoLLI was founded in 1991 to advance research and education on the interface between logic, linguistics, computer science and cognitive science and related disciplines. Cross-fertilization between these areas has frequently led to significant progress on challenging research problems. Consequently, titles in the FoLLI LNAI series are targeted at researchers in multiple disciplines. As one of its major international activities, FoLLI organizes each year the European Summer School for Logic, Language and Information (ESSLLI). In parallel to the printed book, each new volume is published electronically in LNCS/LNAI Online.

The purpose of this volume is to present a snapshot of the state of the art of research on the languages of the Maltese islands, which include spoken Maltese, Maltese English and Maltese Sign Language. Malta is a tiny, but densely populated country, with over 422,000 inhabitants spread over only 316 square kilometers. It is a bilingual country, with Maltese and English enjoying the status of official languages. Maltese is a descendant of Arabic, but due to the history of the island, it has borrowed extensively from Sicilian, Italian and English. Furthermore, local dialects still coexist alongside the official standard language. The status of English as a second language dates back to British colonial rule, and just as in other former British colonies, a characteristic Maltese variety of English has developed. To these languages must be added Maltese Sign Language, which is the language of the Maltese Deaf community. This was recently recognised as Malta's third official language by an act of Parliament in 2016. While a volume such as the present one can hardly do justice to all aspects of a diverse and complex linguistic situation, even in a small community like that of Malta, our aim in editing this book was to shed light on the main strands of research being

undertaken in the Maltese linguistic context. Six of the contributions in this book focus on Maltese and explore a broad range of topics including: historical changes in the Maltese sound system; syllabification strategies; the interaction of prosody and gesture; the constraints regulating /t/-insertion; the productivity of derivational suffixes; and raising phenomena. The study of Maltese English, especially with the purpose of establishing the defining characteristics of this variety of English, is a relatively new area of research. Three of the papers in this volume deal with Maltese English, which is explored from the different perspectives of rhythm, the syntax of nominal phrases, and lexical choice. The last contribution discusses the way in which Maltese Sign Language (LSM) has evolved alongside developments in LSM research. In summary, we believe the present volume has the potential to present a unique snapshot of a complex linguistic situation in a geographically restricted area. Given the nature and range of topics proposed, the volume will likely be of interest to researchers in both theoretical and comparative linguistics, as well as those working with experimental and corpus-based methodologies. Our hope is that the studies presented here will also serve to pave the way for further research on the languages of Malta, encouraging researchers to also take new directions, including the exploration of variation and sociolinguistic factors which, while often raised as explanatory constructs in the papers presented here, remain under-researched.

As the colonial hegemony of empire fades around the world, the role of language in ethnic conflict has become increasingly topical, as have issues concerning the right of speakers to choose and use their preferred language(s). Such rights are often asserted and defended in response to their being violated. The importance of understanding these events and issues, and their relationship to individual, ethnic, and national identity, is central to research and debate in a range of fields outside of, as well as within, linguistics. This book provides a clearly written introduction for linguists and non-specialists alike, presenting basic facts about the role of language in the formation of identity and the preservation of culture. It articulates and explores categories of conflict and language rights abuses through detailed presentation of illustrative case studies, and distills from these key cross-linguistic and cross-cultural generalizations.

[Language Planning as Nation Building](#) Hachette UK

This book offers an inclusive perspective on the constellation of languages in Europe by taking into account official state languages, regional minority languages and immigrant minority languages. Although "celebrating linguistic diversity" is one of the key propositions in the European discourse on multilingualism and language policies, this device holds for these three types of languages in a decreasing order. All three types of languages, however, are constituent parts of a multilingual European identity and should be taken into account in any type of language policy. Both facts and policies on multilingualism and plurilingual education are addressed in case studies at the national

and European level. The selection of case studies is based on a careful weighing of geographical spread of countries and languages across Europe on the one hand, and availability of established expert knowledge on the other. After an Introduction to the theme of the book (Guus Extra and Durk Gorter), Part I deals with official state languages with a focus on the spread of English as *lingua franca* across Europe (Juliane House), on French and France (Dennis Ager), on Polish in Poland and abroad (Justyna Lesniewska), and on language constellations in the Baltic States (Gabrielle Hogan-Brun). Part II deals with regional minority languages with a focus on Catalan in Spain (Francesc Xavier Vila i Moreno), Frisian in the Netherlands (Durk Gorter et al.), Hungarian as a minority language in Central Europe (Susan Gal), and Saami in the Nordic countries (Mikael Svonni). Part III deals with immigrant minority languages in the United Kingdom (Viv Edwards), Sweden (Lilian Nygren-Junkin), Italy (Monica Barni and Carla Bagna) and Europe at large (Guus Extra and Kutlay Yağmur).

There are more than 100,000 people in the Netherlands born in a Spanish speaking country, or with at least one parent born there. A large part of them fits the definition of heritage speaker: persons exposed to a heritage language in a naturalistic setting from birth, simultaneously or subsequently exposed intensively to another language in childhood, and with varying degrees of proficiency in the heritage language. This dissertation investigates the Spanish spoken as a heritage language by members of a small but tight-knit subgroup: the first and second generation of Chileans in the Netherlands. This Dutch-Spanish bilingual community was studied from a sociolinguistic perspective, and then linguistically on the basis of 60 hours of recordings. These were gathered through visual elicitation and personal interviews with 40 participants - 24 bilinguals and a control group of 16 monolingual homeland speakers in Chile.
