 Univ of California Press
 Data on water quality and other environmental issues are being collected at an ever-increasing rate. In the

past, however, the techniques used by scientists to interpret this data have not progressed as quickly. This is a book of modern statistical methods for analysis of practical problems in water quality and water resources. The last fifteen years have seen major advances in the fields of exploratory data analysis (EDA) and robust statistical methods. The 'real-life' characteristics

of environmental data tend to drive analysis towards the use of these methods. These advances are presented in a practical and relevant format. Alternate methods are compared, highlighting the strengths and weaknesses of each as applied to environmental data. Techniques for trend analysis and dealing with water below the detection limit are topics covered,

which are of great interest to consultants in water-quality and hydrology, scientists in state, provincial and federal water resources, and geological survey agencies. The practising water resources scientist will find the worked examples using actual field data from case studies of environmental problems, of real value. Exercises at the end of each chapter enable the

mechanics of the methodological process to be fully understood, with data sets included on diskette for easy use. The result is a book that is both up-to-date and immediately relevant to ongoing work in the environmental and water sciences. The California State Water Project Hoover Press (a) Design and construction. (1) Each facility or part of a facility constructed by, on behalf

of, or for the use of a public entity shall be designed and constructed in such manner that the facility or part of the facility is readily accessible to and usable by individuals with disabilities, if the construction was commenced after January 26, 1992. (2) Exception for structural impracticability. (i) Full compliance with the requirements of this section is not required where a public entity can

demonstrate that it is structurally impracticable to meet the requirements. Full compliance will be considered structurally impracticable only in those rare circumstances when the unique characteristics of terrain prevent the incorporation of accessibility features. (ii) If full compliance with this section would be structurally impracticable, compliance with this section is

required to the extent that it is not structurally impracticable. In that case, any portion of the facility that can be made accessible shall be made accessible to the extent that it is not structurally impracticable. (iii) If providing accessibility in conformance with this section to individuals with certain disabilities (e.g., those who use wheelchairs) would be structurally impracticable,

accessibility shall nonetheless be ensured to persons with other types of disabilities, (e.g., those who use crutches or who have sight, hearing, or mental impairments) in accordance with this section.

Factories in the Field

Univ of California Press
This book was the first broad exposé of the social and environmental damage inflicted by the growth of corporate agriculture in

California. Factories in the Field—together with the work of Dorothea Lange, Paul Taylor, and John Steinbeck—dramatizes the misery of the dust bowl migrants hoping to find work in California agriculture. McWilliams starts with the scandals of the Spanish land grant purchases, and continues on to examine the experience of the various ethnic groups that have

provided labor for California's agricultural industry—Chinese, Japanese, Mexicans, Filipinos, Armenians—the strikes, and the efforts to organize labor unions [Industrialists in Olive Drab](#) ReadHowYou Want.com After political leaders mismanaged the electricity crisis, California now faces an electricity blight while it struggles to recover from its self-imposed wounds. The California Electricity

Crisis focuses on policy decisions, their consequences, and alternatives: the saga California has faced and is still facing. [A Book of Golden Deeds](#) Good Press A Source Book for Mediæval History is a scholarly piece by Oliver J. Thatcher. It covers all major historical events and leaders from the Germania of Tacitus in the 1st century to the decrees of the Hanseatic

League in the 13th century. *Macmillan Directory of Leading Private Companies* An in-depth scrutiny into the American savings and loan financial crisis in the 1980s. The authors come to conclusions about the deliberate nature of this financial fraud

and the leniency of the criminal justice system on these 'Gucci-clad white-collar criminals'. Moody's Analyses of Investments Directory of Corporate Affiliations **Nelson's Directory of Institutional Real Estate** *The California Electricity*
