As women overtake men in education, they are running one-third of the world's businesses. However, women business-owners are concentrated in small and microbusinesses; fewer than 5 percent of CEOs of the largest global corporations are women. "Women in Business and Management" brings together available data and ILO statistics to provide a comprehensive, up-to-date, and global picture of women in the business world and in management positions. The report highlights the business case for gender diversity, the obstacles that women still face, and ways to move ahead. It advocates a greater role for national business organizations, which can assist their member companies in implementing policies and measures to recruit and retain talented women.

Women's Small Business Ownership Act of 1984 Routledge

In a changing world, how can we be sure that women as well as men entrepreneurs and workers obtain the benefit from these changes? Ensuring that women have the same legal opportunities as men is one part of the picture. By measuring where the law treats men and women differently, *Women, Business and the Law* shines a light on how women's incentives or capacity to work are affected by the legal environment and provides a basis for improving regulation. The fourth edition in a series, *Women, Business and the Law 2016: Getting to Equal* examines laws and regulations affecting women's prospects as entrepreneurs and employees in 173 economies, across seven areas: accessing institutions, using property, getting a job, providing incentives to work, building credit, going to court, and protecting women from violence. The report's quantitative indicators are intended to inform research and policy discussions on how to improve women's economic opportunities and outcomes.

Although the U.S. is at the forefront of nations promoting women's business ownership and entrepreneurship, the role of U.S. federal policies in supporting these goals remains unexamined. This study examines six decades (1951-2011) of U.S. Federal Statutes to answer the research question--how do U.S. federal policies support women's business ownership and women's entrepreneurship? The study methodology includes quantitative and qualitative analysis of federal laws and resolutions. The quantitative analysis suggests that in 1988, with the passage of the Women's Business Ownership Act, the U.S. began to intensify policy interest in this area. What began as policy experimentation in 1988 gradually became institutionalized. The qualitative analysis suggests that in terms of broad policy intent and intended outcomes not much has changed since 1988. Given this sobering finding, we discuss important implications and future research questions to motivate stronger research on how government can better support women business owners and entrepreneurs.

Women, Business and the Law 2021 is the seventh in a series of annual studies measuring the laws and regulations that affect women's economic opportunity in 190 economies. The project presents eight indicators structured around women's interactions with the law as they move through their lives and careers: Mobility, Workplace, Pay, Marriage, Parenthood, Entrepreneurship, Assets, and Pension. This year's report updates all indicators as of October 1, 2020 and builds evidence of the links between legal gender equality and women's economic inclusion. By examining the economic decisions women make throughout their working lives, as well as the pace of reform over the past 50 years, *Women, Business and the Law 2021* makes an important contribution to research and policy discussions about the state of women's economic empowerment. Prepared during a global pandemic that threatens progress toward gender equality, this edition also includes important findings on government responses to COVID-19 and pilot research related to childcare and women's access to justice.

This concise book explores how women fit into the contemporary entrepreneurial discourse by recognizing that gender intersects with, and influences, women's experience of entrepreneurship. The book is novel in that it considers women to be a heterogeneous group and as such acknowledges that ethnicity, culture, class and education will all influence and intersect with female entrepreneurship. As a consequence, it explores issues ranging from theoretical relationships between the constructs of gender and entrepreneurship to more empirical work on how entrepreneurship might act as an empowering change agent for women. In order to address the Euro-US centric assumptions underpinning the influence of gender upon entrepreneurship, a chapter is dedicated to the role of entrepreneurship in empowering Palestine women. This book will be important supplementary reading on entrepreneurship, small business management and women's/gender studies courses - it will prove particularly useful to women moving towards starting their own business as well as postgraduate students researching the topic for the first time.
