He provides practical advice that will enable anyone with a deep passion to practice law to become the lawyer that they always wanted to be. Here is what lawyers are saying: "Whether you have ever considered starting your own firm or simply want to improve your practice at your existing firm

(whether big or small), I urge you to purchase the book *Make It Your Own Law Firm* by Spencer Aronfeld, a trial attorney in Miami, Florida. I recommend you buy it not so much for the helpful advice he gives on how to develop your practice (and there's plenty of that) but more for the writing. What Spencer does, which few non-fiction writers can do, is to move you emotionally. He tells stories and puts you in the middle of them with him and makes you feel what he did. It is a unique and valuable gift for a lawyer, because ultimately we are story-tellers and we are tasked not only to affect the jurors' minds but also to touch their hearts. Spencer's writing style demonstrates he is the consummate story-teller and his diction and cadence and style are worth emulating. So, buy the book. Yes, it has great practice tips. But buy it because you will see what great writing is about. Clear, direct, moving and effective. Keep writing Spencer." Frank Ramos, Esquire

Building Your Ideal Private Practice: A Guide for Therapists and Other Healing Professionals Sphinx Publishing

Collaborations of physicians and researchers with industry can provide valuable benefits to society, particularly in the translation of basic scientific discoveries to new therapies and products. Recent reports and news stories have, however, documented disturbing examples of relationships and practices that put at risk the integrity of medical research, the objectivity of professional education, the quality of patient care, the soundness of clinical practice guidelines, and the public's trust in medicine. Conflict of Interest in Medical Research, Education, and Practice provides a comprehensive look at conflict of interest in medicine. It offers principles to inform the design of policies to identify, limit, and manage conflicts of interest without damaging constructive collaboration with industry. It calls for both short-term actions and long-term commitments by institutions and individuals, including leaders of academic medical centers, professional societies, patient advocacy groups, government agencies, and drug, device, and pharmaceutical companies. Failure of the medical community to take convincing action on conflicts of interest invites additional legislative or regulatory measures that may be overly broad or unduly burdensome. Conflict of Interest in Medical Research, Education, and Practice makes several recommendations for strengthening conflict of interest policies and curbing relationships that create risks with little benefit. The book will serve as an invaluable resource for individuals and organizations committed to high ethical standards in all realms of medicine.
