The long-awaited guide to writing long-  
form nonfiction by the legendary author  
and teacher Draft No. 4 is a master class  
on the writer's craft. In a series of playful,  
expertly wrought essays, John McPhee  
shares insights he has gathered over his  
career and has refined while teaching at  
Princeton University, where he has

nurtured some of the most esteemed  
writers of recent decades. McPhee offers  
definitive guidance in the decisions  
regarding arrangement, diction, and tone  
that shape nonfiction pieces, and he  
presents extracts from his work,  
subjecting them to wry scrutiny. In one  
essay, he considers the delicate art of  
getting sources to tell you what they  
might not otherwise reveal. In another, he  
discusses how to use flashback to place a  
bear encounter in a travel narrative while  
observing that "readers are not supposed  
to notice the structure. It is meant to be

about as visible as someone's bones." The  
result is a vivid depiction of the writing  
process, from reporting to drafting to  
revising—and revising, and revising. Draft  
No. 4 is enriched by multiple diagrams and  
by personal anecdotes and charming  
reflections on the life of a writer. McPhee  
describes his enduring relationships with  
The New Yorker and Farrar, Straus and  
Giroux, and recalls his early years at Time  
magazine. Throughout, Draft No. 4 is  
enlivened by his keen sense of writing as a  
way of being in the world.

**The Complete Idiot's Guide to Stik**  
 Springer Nature  
 When should you adopt an aggressive business strategy? How do we make decisions when we don't have all the information? What makes international environmental cooperation possible? Game theory is the study of how we make a decision when the outcome of our moves depends on the decisions of someone else. Economists Ivan and Tuvana Pastine explain why, in these situations, we sometimes cooperate, sometimes clash, and sometimes act in a way that seems completely random. Stylishly brought to life by award-winning cartoonist Tom Humberstone, Game Theory will help readers understand behaviour in everything from our social lives to business, global politics to evolutionary

biology. It provides a thrilling new perspective on the world we live in. *Draft No. 4* Farrar, Straus and Giroux From the bestselling author of the National Book Award winner *Let the Great World Spin* comes a lesson in how to be a writer—and so much more than that. Intriguing and inspirational, this book is a call to look outward rather than inward. McCann asks his readers to constantly push the boundaries of experience, to see empathy and wonder in the stories we craft and hear. A paean to the power of language, both by argument and by example, *Letters to a Young Writer* is fierce and honest in its testament to the bruises delivered by writing as both a profession and a calling. It charges aspiring writers to learn the rules and even break them. These fifty-two essays are ultimately a profound challenge to a new generation to bring truth and light to a dark world through their art.

**A Guide to Educational Programs in Noncollegiate Organizations** Orb Books Recommender systems are one of the recent inventions to deal with the ever-growing information overload in relation to the selection of goods and services in a

global economy. Collaborative Filtering (CF) is one of the most popular techniques in recommender systems. The CF recommends items to a target user based on the preferences of a set of similar users known as the neighbors, generated from a database made up of the preferences of past users. In the absence of these ratings, trust between the users could be used to choose the neighbor for recommendation making. Better recommendations can be achieved using an inferred trust network which mimics the real world “friend of a friend” recommendations. To extend the boundaries of the neighbor, an effective trust inference technique is required. This book proposes a trust interference technique called Directed Series Parallel Graph (DSPG) that has empirically outperformed other popular trust inference algorithms, such as TidalTrust and MoleTrust. For times when reliable explicit trust data is not available, this book outlines a new method called SimTrust for developing trust networks based on a user’s interest similarity. To identify the interest similarity, a user’s personalized tagging information is used.

However, particular emphasis is given in what resources the user chooses to tag, rather than the text of the tag applied. The commonalities of the resources being tagged by the users can be used to form the neighbors used in the automated recommender system. Through a series of case studies and empirical results, this book highlights the effectiveness of this tag-similarity based method over the traditional collaborative filtering approach, which typically uses rating data. Trust for Intelligent Recommendation is intended for practitioners as a reference guide for developing improved, trust-based recommender systems. Researchers in a related field will also find this book valuable.

This book includes the proceedings of the first workshop on Recommender Systems in Fashion 2019. It presents a state of the art view of the advancements within the field of recommendation systems with focused application to e-commerce, retail and fashion. The volume covers contributions from academic as well as industrial researchers active within this emerging new field. Recommender Systems are often used to solve different complex problems in this scenario, such as social fashion-based recommendations (outfits inspired by influencers), product recommendations, or size and fit recommendations. The impact of social networks and the influence that fashion influencers have on the choices people make for shopping is undeniable. For instance, many people use Instagram to

learn about fashion trends from top influencers, which helps them to buy similar or even exact outfits from the tagged brands in the post. When traced, customers' social behavior can be a very useful guide for online shopping websites, providing insights on the styles the customers are really interested in, and hence aiding the online shops in offering better recommendations and facilitating customers quest for outfits. Another well known difficulty with recommendation of similar items is the large quantities of clothing items which can be considered similar, but belong to different brands. Relying only on implicit customer behavioral data will not be sufficient in the coming future to distinguish between for recommendation that will lead to an item being purchased and kept, vs. a recommendation that might result in either the customer not following it, or eventually return the item. Finding the right size and fit for clothes is one of the major factors not only impacting customers purchase decision, but also their satisfaction from e-commerce fashion platforms. Moreover, fashion articles have important sizing variations. Finally,

customer preferences towards perceived article size and fit for their body remain highly personal and subjective which influences the definition of the right size for each customer. The combination of the above factors leaves the customers alone to face a highly challenging problem of determining the right size and fit during their purchase journey, which in turn has resulted in having more than one third of apparel returns to be caused by not ordering the right article size. This challenge presents a huge opportunity for research in intelligent size and fit recommendation systems and machine learning solutions with direct impact on both customer satisfaction and business profitability.
